Brighton and Hove C.C. International Exhibition of Pictorial Photography.—Entries, March 15; open, April 14–May 1. (E. K. Robins, Little Toll, Isfield, Uckfield, Sussex.)

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

The Week's Meetings

Societies will have their meetings announced here if the syllabus is sent to us at the beginning of the session or from time to time.

Wednesday, December 2nd.

Battersea Men's Inst. C.C. "Amateur Photographer" Prize Slides.
Bayswater and Padd. P.S. "Combination Enlarging." G. Crosby.
Bethnal Green C.C. Practical Work.
Birkenhead P.A. "Carbro"—Demonstration. G. J. de la Mare.
Birmingham P.S. (Ciné Sec.). Lecture. S. B. Carter.
Borough Poly. P.S. "Lantern-Slide Making." A. E. Marden.
Bradford P.S. "Contact Lantern-Slide Making." R. Ellis.
Cheltenham C.C. Lecture by G. F. Harris.
Chorley P.S. "Amateur Photographer" Prize Slides.
Coventry P.S. "The Gowar Coast." G. W. Bott.
Croydon C.C. "Rambles in Sussex." E. Yates.
Dennistoun C.C. G.D.U. and S.P.F. Colour Slides.
Ealing P.S. Lantern-Slide Making and Demonstration. A. S. Kirbyshire.
Edinburgh P.S. "Scottish Portrait Painters." S. Cursiter.
G.E. Mechanics' Inst. P.S. "Quips, Oddities and Ramblings." T. D. Nunn.
Hall Green P.S. "Negative-Making for Beginners." F. Lawton.
Hinckley and D.P.S. W. H. Hadley's Portfolio, "Miscellaneous."
Howard De Walden P.C. Lecturettes by Three Members.
L.M.S. (London) P.S. "Photographic Emulsion Making." A. Robinson.
London School of Hygiene P.S. "Photomicrography." E. A. Robins.
Luton and D.C.C. "Bromide Enlarging." Mrs. A. C. Jordan.
Manchester A.P.S. "Fes the Mysterious." James Shaw.
Northallerton and D.P. and P.S. Ciné Evening.
Partick C.C. Demonstration—"Bromoil." J. W. Combe.
Rotherham P.S. "A Chat on Plates and Films." S. Bridgen.
Shropshire C.C. "Ordinary, Chrome and Pan. Photography." Agfa, Ltd.
South Essex C.C. "Rhythm." R. J. Dobinson.
S. Suburban and Catford P.S. "We Go Afloat"—Lantern Lecture. L. C. Boyce.
Worcestershire C.C. "Kodachrome." Messrs. Kodak, Ltd.
York P.S. "Enlarging on Chloro-Bromide for Exhibition." J. C. Cox.

Thursday, December 3rd.

Accrington C.C. "From Liverpool to Vancouver." E. S. Maynard.
Armley and Wortley P.S. Enlarging by Members.
Ashton-under-Lyne P.S. Criticism of Exhibition Prints. H. Chapman.
Aston P.S. "Preparing an Exhibition Print." J. O. Wilkes.
Bath P.S. Members' Lantern-Slide Night.
Bolton C.C. "The Amateur Photographer" Prize Slides, 1936.
Brighouse C.C. "Lantern-Slide Making." G. W. Eccles.
Bury P.S. Social Evening.
Camberwell C.C. Lecture.
Cardiff C.C. "Flashlight." R. J. Cox.
Coatbridge Co-op. C.C. "Bromoil"—First Stage. A. Gibbs.
Derby Railway Inst. P.S. "Pictorial Photography." F. Green.
Greenock C.C. Demonstration—Lantern-Slide Making. D. R. Huchison.
Hampshire House P.S. "How it Works in Colour Photography." D. A. Spencer.
Hull P.S. "A Chat on Portrait and Figure Work." S. Bridgen.
Keighley and D.P.A. Y.P.U. "Winter Sports in Switzerland." S. E. Bottomley.
Kinning Park Co-op. C.C. "Mounting and Trimming Prints." J. Hagan.
Letchworth C.C. "A Discussion on Print Quality." J. Bowyer-Lowe.
Liverpool A.P.A. "Astronomical Photography." W. Porthouse.
Loughborough P.S. "The Bernese Oberland." T. L. Llewellyn, M.D.
Manchester A.P.S. "The Charm of England's Byways." J. D. Berwick.
Newcastle and D.A.C.A. Films—Godiva Film Group.
N. Middx. P.S. General and Outings. Members' Queries.
Oldham P.S. Competition Slides, 1936. Inter-Club Alliance.
Padiham and D.P.S. C.P.U. Lantern Slides, 1936.
Preston C.C. Whist Drive.
Sinclair P.C. Exhibition.
Singer C.C. Whist Drive and Dance.
Stourbridge Inst. P.S. "The Romance of Gunpowder Plot." Wm. A. Clark.
Sunderland P.A. "Ciné Photography for Amateurs." A. S. Greaves.
Urmston and D.P.S. Talk. Mr. Broadhead. Ensign, Ltd.
Watford C.C. Monthly Competition (inviting Ciné Section).
Wimbledon C.C. Discussion on "Central Association."
Woolwich P.S. Lecturettes. Bexley Heath P.S. House Exhibition.

Friday, December 4th.

Royal Photographic Society. Joint Meeting. D. McMaster.
Bethnal Green C.C. "Week-end in Bruges." G. Wright.
Colne C.C. "The Lakes and Fells of Cumberland." A. Stirzaker.
Dartmouth Lit. and Debating S. (Phot. Sec.). S. S. Portraits.
Harrogate P.S. Members' Evening.
Ilkeston Arts Club. Demonstration—Still Life.
King's Heath and D.P.S. Print Criticism—Architecture.
Leigh Lit. S. "Some Old Halls of Lancashire and Cheshire." T. Burton.
Manchester A.P.S. "Antidote and Anecdote." J. Lomas.
Southend-on-Sea and D.P.S. "Photographic Chemicals." J. Curtis.
Walkden and D.P.S. Lantern and Talk. Geo. Haines.
Wallasey A.P.A. Y.M.C.A. Lecture. Miss Cann.
Wimbledon Ciné C. "Films the Amateur Can Make." P. Rotha.

Saturday, December 5th.

Royal Photographic Society. Projection of Competition Films.
Gateshead and D.C.C. Practical Portraiture Night. T. Ambler.
Hackney P.S. Outing—Thames Side.
Hampshire House P.S. Films from Central Europe. E. P. Davey.
Howard De Walden P.C. "Daily Record" Exhibition opens.
Leamington and D.P.S. Lantern Lecturettes and Discussion. Society Members.
Manchester A.P.S. "Five Thousand Days in the Zoo." J. E. Saunders.
Oldham P.S. "Picture Making, Worth-While Photography."
Sinclair P.S. Dance.
S. Suburban and Catford P.S. Annual Dinner.

Sunday, December 6th.

Edinburgh P.S. General Meeting. J. W. Shairp.
Todmorden P.S. "Beautiful Bavaria." Miss Wells.

Monday, December 7th.

Ashington and Hirst P.C. "Durham." R. Chalmers.
Blackburn and D.P.S. "Working-up the Exhibition Print." Mrs. Madeley.
Blackpool and Fylde P.S. "Mounting Prints." A. Firth and P. C. Harper.

Monday, December 7th (*contd.*).

Bournemouth C.C. "Herrings and Other Things." G. H. Thurley.
Bradford P.S. "The French and Italian Rivieras." E. S. Bottomley.
Brighton and Hove C.C. Beginners' Evening (4).
The Camera Club. "Night Photography with the Leica."
Chelsea P.S. "A Spring Cruise in the Mediterranean." Capt. J. H. Drummond.
City of London and Cripplegate P.S. Kodak Lecture Service.
Darlington C.C. Exhibition Slides.
Dewsbury P.S. "Smiling Somerset." J. Hadfield.
Erdington and D.P.S. "The Art of Architecture." H. J. Trueman.
Finchley Amateur C.S. Doncaster Amateur Film Society.
Glasgow and W. Scotland P.A. Criticism of Members' Competition.
Halifax P.S. Committee Meeting.
Kidderminster and D.P.S. "Excerpts from an Amateur's Film Library." G. Pierson.
Kingston C.C. "Norman Architecture." S. E. Whitaker.
Lancaster P.S. "Picture-Making by Photography." S. Bridgen.
L.C.C. Staff C.C. Demonstration—"Bromoil." G. E. Whalley.
Leeds C.C. "Cave Photography." E. Clarkson.
Leek P.S. "Portraiture." Members.
Long Eaton and D.C.C. Lantern Lecture. Ilford Ltd.
Maidstone and Dist. P.S. Demonstration. R. H. Lawton.
Newcastle (Staffs) and D.C.C. "The Amateur Photographer" Prize Slides.
Oldham Equitable P.S. Advanced and Novice Print Competitions.
Preston C.C. Lantern Lecture. Miss R. Littlewood.
Preston Scientific S. "Rock Plants." A. Birkenshaw.
Shropshire P.S. "The Lantern Slide." W. L. F. Wastell.
Southampton C.C. "Some Masterpieces of Photography." J. Dudley Johnston.
Southport P.S. Exhibition.
S. London P.S. Criticism of Prints and Slides. W. Alan Wilson.
Wallasey A.P.S. Y.M.C.A. Lecture.
Walsall P.S. "Amateur Photographer" Portfolio Prize Prints.
Walthamstow and D.P.S. "Retouching the Negative." W. Holborok.

Tuesday, December 8th.

Royal Photographic Society. Programme by Association Ciné Technicians.
Armstrong Whitworth C.C. "Photography to Shipping." J. Cleet.
Bedford C.C. "The Miniature Camera." J. R. Bryant.
Belfast C.P. C.C. Lantern Lecture.
Birmingham P.S. "Summer Outings." G. G. Heathcock.
Cambridge P.C. Lantern Lecture. K. Baker.
Cardiff N.S. (Phot. Sec.). "A Talk on Miniature Photography." A. E. Green.
Doncaster C.C. Y.P.U. Lecture. T. M. Fowler.
Dunfermline P.A. S.P.F. Portfolio.
Exeter C.C. Members' Slide Evening.
Grimsby P.S. "Ciné Film Cutting, Editing and Titling."
Guildford and D.C.C. Lecturettes. By Members.
Hackney P.S. "Homely Hertfordshire." H. Rose.
Halifax P.S. "A Talk on the Exhibition." H. Bairstow.
Hamilton P.S. "Theatre Photography with a Miniature Camera." J. M. Goldrick.
Harrow C.C. "Some Castles and Gardens." R. Gardner.
Leeds P.S. "Miniature Negative Photography."
Leicester and Leicestershire P.S. "Stereoscopic Photography." K. C. Biggs.
Manchester P.S. Exhibition Slides.
Morecambe, Heysham and D.P.S. "Mechanical or Artistic Vision." E. Rogers.
Newcastle and Tyneside P.S. "Bewicks Engravings." B. Redford.
Newport and Monmouthshire P.S. "Bromoil." H. B. Redmond.
Norwood C.C. Lecture. R. Fleming.
Nottingham and Notts P.S. "The Amateur Photographer" Prize Slides 1936.
Palmers Green C.S. Model Works.
Preston Scientific S. "Pictorial Control." E. Eastham and Members.
Rugby and D.P.S. Portraiture Competition Evening.
Sheffield P.S. "Lincoln Cathedral." E. Brand.
Small Heath P.S. Alliance Slides.
South Shields P.S. Lantern Slide, Postal Club Exhibition Slides.
Stafford P.S. "Famous Old Inns of England." H. Browning Button.
St. Bride P.S. "The Building of the English Church." E. A. Robins.
Stockport P.S. "Press Photography." F. Greaves.
Stockton-on-Tees and D.C.C. Quarterly General Meeting.
Warrington P.S. "Warm Tones on Bromide and Gaslight Paper." G. Lee.
Willesden P.S. "After-Work on the Print." S. I. Elkck.
Wood Green P.S. Lecturette Trial Run.

Wednesday, December 9th.

Battersea Men's Inst. C.C. "Christmas Cards by Photography."
Bayswater and Padd. P.S. "Modern Aids to Indoor Portraiture." S. Schofield.
Bethnal Green C.C. "Chemistry of Photography."
Birkenhead Y.M.C.A. Criticism of Competition.
Birmingham P.S. (Ciné Sec.). "Talk on Agfa Films."
Borough Poly. P.S. "Thoughts on Art." T. F. Garnish.
Brighton and Hove C.C. "Press Button B." G. H. Dannatt.
Bristol P.S. Folio Exhibition. Criticisms.
Bury P.S. "The Charm of the English Village." J. G. Birkby.
Cheltenham C.C. Beginners' Meeting.
Chorley P.S. "Pilgrimages to Old Homes." J. E. Balshaw.
Coventry P.C. "Photograms of the Year 1936."
Croydon C.C. "Print Production on Kodak Papers."
Darwen P.S. Competition Slides. L. & C.P.U.
Dennistoun C.C. Visit to "Daily Record" Exhibition.
Ealing P.S. "Waiting." Print Competition.
G.E. Mechanics' Inst. P.S. Institute Prize Distribution.
Hinckley and D.P.S. "The Historic Hastings Country." H. Browning Button.
L.M.S. (London) P.S. "A Year with Nature." J. E. Roberts.
Loughborough P.S. Whist Drive.
Northallerton and D.P. and C.S. Rolleiflex Slides.
Partick C.C. G.D.U. Portfolio.
Phœnix C.C. G.D.U. and S.P.F. Slides.
Solihull P.S. "Architectural Study."
South Essex C.C. Demonstration—"Combination Printing." W. E. Ginger.
S. Suburban and Catford P.S. Competition Evening.
Worcestershire C.C. "Successful Picture-Making for Beginners." E. Cave.
York P.S. Y.P.U. Circulating Portfolio.

Readers' Questions ANSWERED

GENERAL.—All communications for the Editor should be addressed: "The Editor, *The Amateur Photographer and Cinematographer*, Dorset House, Stamford Street, London, S.E.1," and in every case, without exception, must give the name and address of the writer.

CONTRIBUTIONS.—The Editor is glad to consider original, up-to-date manuscripts on photographic subjects. All contributions must be typewritten, or in very legible handwriting on one side of the paper only. Letters or communications arising out of matters already appearing in the paper are not paid for. The Editor disclaims legal responsibility for the safety of matter submitted to him, but he will endeavour to return rejected manuscripts, etc., when a stamped addressed envelope is enclosed. MSS. or prints that are not actually accompanied by a stamped wrapper or envelope can in no case be returned. Reproduction fees for prints are only paid by arrangement beforehand. The sending of a print, without any condition stated, will be taken as permission to reproduce it without fee.

ENQUIRIES AND CRITICISM.—Advice, Criticism and Information are freely given, but the following conditions should be read carefully before applying, as any communication which does not comply with the rules must be ignored.

(1) See "General" above. (2) Every question and every print for criticism must be sent separately through the post, and must be accompanied by a *separate* stamped addressed envelope. No exception can be made in any case to this rule, except so far as enquiries or prints from Overseas are concerned. (3) Neither enquiries nor prints for criticism must be enclosed with competition prints. (4) On the back of each print sent for criticism, in addition to the name and address of the sender, must be the title (if any), and the criticism coupon from the current issue. (5) Enquiries should be clearly written, on one side of the paper only, and should be specific and not general. Such enquiries as "How can I take interiors?" or "Can you give me some hints on outdoor portraiture?" are too general to be dealt with in this section. (6) All envelopes should be distinctly marked "Query" or "Criticism," as the case may be. (7) Prints are sent for advice or criticism on the distinct understanding that by so doing permission is given for their reproduction without fee. We endeavour to deal promptly with enquiries, but cannot undertake to answer by return of post, nor can we give precedence to any enquiry.

A selection of those replies is printed each week, but all questions are answered by post. Enquiries from abroad must contain a coupon also, but it need not be from the current number, and should be cut from the latest issue to reach the enquirer

Developers.

I am rather confused by the number of developers to be had on the market. Can you recommend one which will give good contrast with maximum detail, which will do for subsequent enlarging. My negatives are miniature, size 2¼ × 2¼.
W. R. S. (Denmark Hill.)

Any of the recognised developers, properly used, will give good negatives, and there is nothing to guide us in recommending one in preference to all the others. You do not say, for example, whether you wish to buy the developer or make it up yourself. As your films are small, we suggest you use one of the fine-grain developers of which we have been publishing formulæ for the last few weeks, under the heading "Miniature Notes."

Your phrase "which will do for subsequent enlarging" might be read to mean that you propose to use the same developer for bromide papers. We would discourage this; in printing, the colour of the image is very important, and you should use the maker's recommended developer, which in many cases can be bought in packet form.

Enlarging from Paper Negatives.

Would it be possible to make enlargements or prints from paper negatives by projection with an epidiascope? F. L. (Manchester.)

It should be possible to do as you suggest but we have no practical experience of this particular method. It is clear that the process would be identical in principle with photographing the negative on an enlarged scale with a copying camera. Much would depend on the projecting lens of the epidiascope; these are not always as well corrected as the lens of a camera or enlarger. We would not like to take the responsibility of advising you to buy an epidiascope for the purpose, but if you already possess, or can borrow, one, we think the experiment well worth trying.

An Enlarger Query.

I am thinking of making an enlarger, but I am not quite clear as to the distance the source of light should be from the condenser. Can you enlighten me on this point?
D. S. O. (Lewisham.)

The distance of the light from the condenser varies according to the degree of enlargement, although there is considerable latitude in this respect. The distance is decided by moving the light until a clear and even disc of light is obtained on the easel without having a negative in the carrier.

Additions to Developer.

The manufacturers of "——" (a proprietary developer) recommend the addition of 1 drop of potassium bromide solution to each ounce. Why is this? I have read that a pinch of salt in the developer improves the tone of prints. Do you advise its addition? J. R. S. (Canada.)

The addition of bromide to the developer is a precaution against slight fog in the print, and also controls the colour to a slight extent. If you get clear prints of good colour without it there is no reason for adding it.

We strongly advise you not to add a pinch of salt or anything else to a developer unless the makers suggest it. What suits one developer might be fatal with another.

Enlarging with Batteries.

Although I have no electric mains in my house, I am desirous of buying a vertical enlarger. These, however, all seem to be designed for electric light. Could I get satisfactory results using a 12-volt car battery? And would you recommend a condenser or a diffuser type of enlarger?
A. H. W. (Cheshire.)

Many photographers enlarge with a battery even of lower voltage than the one you suggest, and, although the exposures may be long, the idea is quite practicable. We should certainly advise that you use a condenser, as any system of diffusion wastes a good deal of light, and so would result in unnecessarily lengthening the exposures.

Enlarged Negatives by Reversal.

Can you please tell me if there is a simpler method of making an enlarged negative by reversal than that given in the Leica Manual? I have tried this process without much success, using Eastman Ortho Portrait Films. C. E. B. (Hertford.)

We do not know of any process more reliable than that given in the Manual, and we would suggest that your non-success may be due to your using the wrong film. The particular method described has been worked out with the Eastman Process film, which has an emulsion of totally different type from the film you have been using. Such processes as this depend very intimately on the film used. But if you do not meet with success even when using the prescribed film, we suggest you revert to the more straightforward method of making an intermediate positive.

Bichromate Stain.

Can you please let me know if there is any means of removing a brown stain caused by the accidental immersion of a negative in a potassium bichromate solution? The stain does not appear to be affected by washing. A. S. H. (Dagenham.)

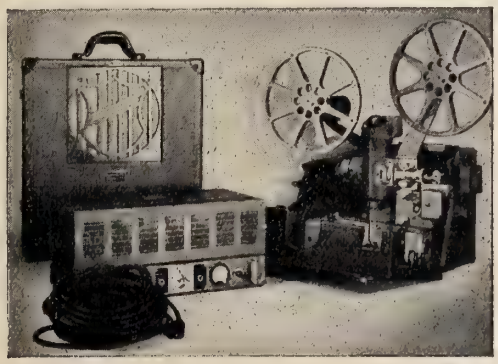
We should advise you to soak the negative in clean water and then place it in a solution of potassium metabisulphite of about 5 per cent strength. If this lightens but does not remove the stain, soak the negative in several successive fresh baths until the stain finally goes. Wash the negative for a short while before drying it.

Selling Photographs.

Is there any objection, when submitting a photograph to several firms (e.g., fine art, newspaper or magazine) at the same time, to informing them that the photograph has not hitherto been published? Or will this statement be taken to imply that it will not be submitted elsewhere? In view of the very long time taken by some firms in making a choice this point is of considerable practical importance. G. D. B. (Shipley.)

We know of no objection to the course you state. It would, however, be necessary, if the photograph is accepted by one firm, to inform the other firms of the fact, so that they could no longer be under the impression that the photograph was unpublished. Previous publication is often no objection to a photograph provided that its previous use is in a connection outside the sphere of the prospective second user.

Diluting a Developer.



I use a daylight tank in which, with developer of normal strength, I have to develop my films for ten minutes. As I never have two films to develop at once, I throw away the developer after use. As the tank requires 27 oz. to fill it, I should prefer to use my developer at half strength for the sake of economy. L. C. R. (Plymouth.)

In a general way diluting a developer to half strength means that you must give twice the development time. You must, however, take care not to dilute a developer so far that there is not sufficient of the chemicals used to complete the work required of them. You should be safe in this respect if you reckon that each 3¼ × 2¼ negative requires 1 oz. of full-strength developer, which means that in your case you might even dilute your developer to one-third its present strength, giving then three times your usual time. But it is not safe to dilute a fine-grain developer, as this may coarsen the grain.

An Announcement to
AMATEUR CINEMATOGRAPHERS

Three years ago the firm of R. G. Lewis came into existence as specialists in Miniature Photography. Now, at last, a similar organisation has been formed to offer to serious amateur cinematographers a service run on individual lines and based on a more scientific attitude to the problems and the general technique of home cinematography.

R. G. Lewis (Ciné) is an entirely separate organisation from "The Miniature Camera Specialists," but will adhere closely to that policy of specialist concentration that has established the reputation of its parent firm as England's leading distributors of high-class miniature precision apparatus. R. G. Lewis (Ciné) will be staffed exclusively by active ciné enthusiasts. A leading feature of the business will be disinterested advice to purchasers on the selection of their apparatus. Existing instruments will be gladly taken in part exchange for new outfits, and, although we know that the claim is a sadly exaggerated one, our part exchange allowances will be more than generous. In the case of ciné enthusiasts who also own miniature cameras, and in this way have had previous dealings with R. G. Lewis, claims of this kind are, of course, unnecessary.

Siemens, Bell & Howell, Victor, Movikon, Bolex, Gebescope—we stock **every** high-class ciné camera and projector, and have the most complete range of talkie equipment. Several pages would be required to illustrate even a small proportion of these, and so this week we are content to describe one superlative instrument only :—

The 1,000-watt BELL & HOWELL FILMOSOUND 16mm. TALKIE PROJECTOR

The Filmosound Model 130, with its great illuminating power, remarkable amplifier, and provision for two projectors coupled together, is the ideal equipment for the large auditorium. Its 1,600-ft. film capacity permits of 45-minute projection at sound speed, or 64 minutes at 16 pictures per second. The amplifier is a high-fidelity reproducing unit with an undistorted output of 25 watts Although intended for semi-permanent installation, the Filmosound 130 is housed in two cases to facilitate transportation.

PRICE **£300 : 0 : 0** *TRANSFORMER* **£10 : 0 : 0**

OUR SERVICE. We are prepared : (1) To undertake the editing of customers' films. (2) To make films with our own equipment or to loan cameraman (estimates on request). (3) To show films anywhere and at any time. (4) To show customers' films in our own projection theatre free of charge. Also to criticise these films if desired. (5) To give sound advice on cinematography in general and our frank opinion on all apparatus. (6) To take in part-exchange or to buy for cash up-to-date apparatus.
We have a first-class film library and a well-equipped repair shop in which we are competent to undertake repairs and adjustments to all ciné film equipment.

Rolleicord

THE PRIZE-WINNING CAMERA

No wonder everyone's keen on the Rolleicord—it is the finest precision camera on the market at such a price. Its optical equipment makes it suitable for perfect photography all the year round, in any light or weather. Rolleicord shows your picture full size and right way up on the ground-glass screen, and takes 12 exposures on $3\frac{1}{4} \times 2\frac{1}{4}$ roll film for 1/-. It is designed to take all Rolleiflex accessories except the angle mirror—a point which makes it really versatile. Fitted with f/3.5 Zeiss Triotar lens and Compur shutter, speeded to 1/300th sec., T. and B. With handsomely finished leather-covered body. **NOW £16:10:0**

There is also the Zeiss Triotar f/4.5 model at £14 10 0

★ LIMITLESS LIGHTING EFFECTS and PICTURES of OUTSTANDING MERIT

★ MATÉLUX

42/-
COMPLETE WITH LAMP
Carrying Case 7/6 Extra.

EXTRA LAMPS 12/6 EACH

The Lamp that puts LIGHT in de-LIGHT-ful Pictures

GET YOUR LIGHTING RIGHT !

NO matter what type of camera and lens is used, there is available, to both Amateur and Professional Photographers, this wonderfully portable and intensely brilliant source of light, which has completely revolutionised the field of indoor photography.

Remember, if your lighting is right, and correct exposure given, the resulting negative will be perfect.

The " Matélux " is a perfectly balanced outfit, weighing less than 13 oz., whilst the special supercharged 300-watt Lamp has a life of over 100 hours, and suffices for many thousands of beautiful photographs. The "Matélux" Reflector has a Movable-Socket Table Stand—enabling the light to be directed to any angle.

" Matélux " Lighting Equipment is the open door to complete success in the fascinating field of indoor photography. Learn more about this wonderful illuminant.

The very wide scope of a Leica

ONE big reason for the enormous following that LEICAS have obtained is their truly notable versatility. Literally, you can do the work of a battery of ordinary cameras with just one compact and handy Leica. Landscapes, seascapes, genre studies, architecture, sports scenes, groups, portraits, distant telephoto work, microphotography—all these, and a lot more, are well within its generous scope. A LEICA, in truth, represents not just one camera, but a dozen.

- Let "the WESTMINSTER" show you how a liberal allowance for your present camera, in EXCHANGE, and Westminster Out-of-Income facilities, can help you in realising your ambition and aquiring a LEICA.

Leicas cost from £16 upwards. Below is shown the Model IIIa, with f 2 Summar lens, automatic focussing, shutter speeds to 1/1,000th sec. at £43, or 9 monthly paymens of £5 0s. 4d.

MISCELLANEOUS ADVERTISEMENTS

Prepaid Advertisements

THE CHARGE FOR ADVERTISEMENTS IN THESE COLUMNS IS :—

12 words or less.....2/6
2½d. for every additional word.

Each paragraph is charged separately.

SERIES DISCOUNTS are allowed to Trade Advertisers as follows on orders for consecutive insertions, provided a contract is placed in advance, and in the absence of fresh instructions the entire "copy" is repeated from the previous issue : 13 consecutive insertions, 5% ; 26 consecutive, 10% ; 52 consecutive, 15%.

All advertisements inserted in these columns must be strictly prepaid, and reach the offices, Dorset House, Stamford Street, S.E.1, not later than first post Friday for the following week's issue, or one day earlier at the Branch Offices, 19, Hertford Street, Coventry ; Guildhall Buildings, Navigation Street, Birmingham, 2 ; 260, Deansgate, Manchester, 8 ; 26B, Renfield Street, Glasgow, C.2.

Advertisements received too late for one issue, or crowded out, are published in the first following in which there is space. The Proprietors retain the right to refuse or withdraw advertisements at their discretion.

The Proprietors are not responsible for clerica or printer's errors, although every care is taken to avoid mistakes.

Box No. Advertisers

If a Box No. is required, the words "Box 000, c/o 'The Amateur Photographer'" should be included in the charge, and an additional 6d. sent for registration and cost of forwarding any replies.

Letters addressed to box numbers are simply forwarded by us to the advertisers. We do not deal with the correspondence in any other way, nor accept any responsibility in connection with the advertisements.

Deposit System

Readers may deal in safety through our Deposit System. Purchase money should be deposited with "The Amateur Photographer and Cinematographer," when both parties are advised of its receipt. The time allowed for decision is three days, counting from receipt of goods, after which period, if buyer decides not to retain goods they must be returned to sender. If a sale is effected, buyer instructs us to remit amount to seller, but if not, seller instructs us to return amount to depositor. Carriage is paid by the buyer, but in event of no sale, and subject to there being no different arrangement between buyer and seller, each pays carriage one way. The seller takes the risk of loss or damage in transit, for which we take no responsibility. For transactions up to £10 a deposit fee of 1/- is charged ; over £10 and under £50, 2/6 ; over £50 and under £75, 5/- ; over £75 and under £100, 7/6 ; over £100 one-half per cent. All correspondence must be sent to Dorset House, Stamford Street, London, S.E.1.

Cheques and Postal Orders sent in payment for deposits or advertisements should be made payhle to ILIFFE & SONS LTD., and crossed **& Co.**

Notes being untrreeable if lost in tronsit should not be sent as remittances.

WARNING

We have received many complaints from our readers in regard to the business methods of Mr. R. L. Green, trading as R. L Green's Photographic Exchange, of 218, Fore Street, Edmonton, London, N.18, or (possibly with different initials) as Cine Photo Supplies, 4, Holborn Place, High Holborn, W.C.1.

For some considerable time we have refused to insert his advertisements in "The Amateur Photographer and Cinematographer," and from the complaints we have received it would appear that his practice is to communicate with private advertisers having goods for sale, offering to take such goods in exchange for others, or to purchase for cash. Readers are advised to ignore all such offers from this quarter.

GAMAGES

Purchase of an important stock of 9.5-mm. Ciné Projectors at a big discount

Although offered at such a remarkably low price, this is definitely not a toy, but a first-class 9.5-mm. Home Ciné Projector.

A model that has never previously been offered at anything like this price. Made to take up to 60 ft. of 9.5-mm. film (or, with super attachment, up to 300 ft.), this amazing little machine incorporates the following features:

- ★ Adaptable for either 100-125 volts or 200-250 volts A.C. or D.C.
- ★ 40 volts 15-watt lamp gives a well illuminated picture up to 30 inches wide.
- ★ Double-claw, particularly smooth-running movement.
- ★ Completely self-contained and resistance built in lamphouse.
- ★ Best hard brass precision-cut gears

32/6

Silver Screen on wood rollers, 7/6. Super attachment with super reel, 17/6. Pathescope Films, 30-ft. 3/6, 60-ft. 6/-.

Complete Outfit, consisting of Projector, super attachment and screen,

Leica Projector VIIIa (Udano), *As new.* List £8 13s. 6d..... **£6:17:6**

Cine Cameras

9.5 Pathe, hand-turn, case, tripod. *Good condition* **£1:1:0**

9.5 Coronet. *Good condition* **£2:2:0**

9.5 Pathe B Motocamera, f/3.5 lens. *Good condition* **£3:3:0**

Ditto. *Very good condition* **£4:10:0**

9.5 Pathe Luxe Motocamera, f/3.5 lens. *As new*..... **£5:5:0**

16-mm. Cine-Kodak BB Junior, f/1.9 Kodak, combination case. *As new.* List £20 8s..... **£13:10:0**

16-mm. Bell-Howell Filmo 70, 1-in. Taylor-Hobson f/3.5 lens, also 88-mm., Voigtlander Heliar Tele lens f/4.5. *Good condition* **£14:14:0**

SUPER FINE ★ GRAIN DEVELOPING SERVICE

★ ANY MINIATURE FILM DEVELOPED IN FINEST GRAIN POSSIBLE.

★ OUTSIZE ENLARGEMENTS ON SELECTED PAPERS

..YOUR CHANCE TO START MOVIES OR PHOTOGRAPHY AT A FRACTION OF ORIGINAL COST

Every instrument is thoroughly reliable, and consistent with the amazing value we always offer. Some are as much as 75% below list prices. Here's a chance you can't afford to miss—choose now—first come, first served

ROLL-FILM CAMERAS

98306. 3½ × 2½ **Ensign Carbine,** f/4.5 Ross anastigmat lens, Compur shutter, 1 to 1/250th sec. Cost £10 15s..... **£3 5 0**

5823. 3½ | 2½ **Zeiss Ikon Cocarette,** f/6.3 Novar anastigmat lens, 3-speed Derval shutter. Cost £4 10s..... **19s. 6d.**

3536. 3½ | 2½ **Roll Film and Plate Icarette,** f/4.5 Zeiss Tessar lens, delayed-action Compur shutter, double extension, rising front. Cost £19 28..... **£10 10 0**

5866. 3½ | 2½ **Pocket Kodak,** single Achromatic lens, shutter speeded 1/25th to 1/50th. Cost £2 28..... **10s. 6d.**

5669. 3½ | 2½ **Watch Pocket Carbine,** f/4.5 Ross Xpres lens, Compur shutter, 1 to 1/250th sec. Cost £12 10s..... **£3 10 0**

5705. Kodak Six-twenty Duo 2-on-3½ × 2½ Camera, f/4.5 Kodak anastigmat lens, 3-speed, delayed-action shutter. Cost £6..... **£3 15 0**

5749. 3½ × 2½ **Zeiss Ikon Cocarette,** f/4.5 Zeiss Tessar lens, delayed-action Compur shutter, 1 to 1/250th sec. Cost £10..... **£3 19 6**

5810. Ensign Double-eight 2-on-V.P. Camera, f/4.5 Ensar anastigmat lens, 3-speed shutter. Cost £3 12s. 6d..... **25s. 0d.**

3876. 3½ | 2½ **Ensign Roll Film and Plate Carbine,** f/4.5 Lukos anastigmat lens, Compur shutter, 1 to 1/250th sec. Cost £9 17s. 6d.. **£3 19 6**

5849. Six-Sixteen Kodak Junior, f/6.3 Kodak anastigmat lens, shutter speeded 1/10th to 1/100th sec. Cost £6 15s..... **27s. 6d.**

5854. 1a Goerz Tenax, f/6.8 Goerz Kalostigmat lens, 7-speed shutter, 1 to 1/100th sec. Cost £4 12s. 6d..... **29s. 6d.**

5452. 1a Pocket Kodak, f/6.3 anastigmat lens, shutter speeded 1/25th to 1/50th sec. Cost £3 15s..... **19s. 6d.**

5831. ½-pl. Roll Film and Plate Zeiss Nixe, f/4.5 Zeiss Tessar lens, D.A. Compur shutter, 1 to 1/200th sec., double extension, rack rising and cross front. Cost £16 10s..... **£5 19 6**

3191. ½-pl. Contessa Nettel Roll Film Camera, f/4.5 Zeiss Tessar lens, Compur shutter, 1 to 1/250th sec., rack rising front. Cost £10 15s. **£3 3 0**

5406. ½-pl. Roll Film and Plate Carbine, f/8 Rapid Aplanat lens, shutter speeded 1/15th to 1/100th sec. Cost £4 10s..... **9s. 6d.**

5324. P.C. Roll Film and Plate Ica Nixe, f/7.2 Zeiss Double Protar lens, Compur shutter, 1 to 1/200th sec., double extension, rack rising and cross front. Cost £24 ..... **39s. 6d.**

5559. ½-pl. Kodak, f/6.8 T.T. & H. Kodak anastigmat lens, 3-speed shutter. Cost £5 **12s. 6d.**

5874. P.C. Roll Film Kodak Special, f/4.5 Zeiss Tessar lens, Compur shutter, range-finder. Cost £20 ..... **£3 3 0**

5130. ½-pl. Newman & Guardia New Ideal Sibyl, f/4.5 Cooke Aviar lens, N. & G. shutter, speeded ½ to 1/100th sec. Cost £26.. **£5 19 6**

2229. 3½ × 2½ **Ensign Auto-speed,** f/4.5 Ross Xpres lens, focal-plane shutter, 1/15th to 1/500th, rising front. Cost £19 10s..... **£3 19 6**

5557. 3½ × 2½ **No. 6 Ensign Carbine,** f/4.5 Ross Xpres anastigmat lens, Compur shutter, 1 to 1/250th sec. Cost £11 17s. 6d..... **£3 10 0**

5864. 3 × 4 cm. Nagel Vollenda, f/3.5 Schneider Radionar lens, Compur shutter, 1 to 1/300th sec. Cost £7 10s..... **£3 19 6**

5359. 1a Zeiss Icarette, f/4.5 Zeiss Tessar lens, Compur shutter, 1 to 1/250th sec., roll-film and plate model. Cost £13 10s... **£4 19 6**

5695. 3½ × 2½ **New Special Sibyl,** f/4.5 Ross Xpres lens, N. & G. shutter, speeded ½ to 1/150th sec. Cost £23..... **£5 5 0**

5917. V.P. Kodak Special, f/5.6 Kodak anastigmat lens, Diomatic shutter, speeded 1/10th to 1/100th sec. Cost £3 3s..... **15s. 0d.**

5971. V.P.K. Model B, single lens, T. and I. shutter. Cost £1 5s..... **7s. 6d.**

5353. 2½ × 2½ **Voigtlander Brilliant Roll Film Camera,** f/7.7 Voigtar lens, shutter speeded 1/25th to 1/50th sec. Cost £2 5s..... **27s. 6d.**

5978. 3 × 4 cm. Foth-Derby, f/3.5 Foth anastigmat lens, focal-plane shutter, 1/25th to 1/500th sec. Cost £5 5s..... **£3 7 6**

5367. P.C. Kodak Roll Film, single Achromatic lens, shutter speeded 1/25th to 1/100th sec. Cost £5 ..... **8s. 6d.**

5714. 2c Kodak Series III, f/6.3 anastigmat lens, Diomatic shutter, speeded 1/10th to 1/100th sec. Cost £4 10s..... **12s. 6d.**

95820. 2c Kodak Special, f/4.9 Zeiss Tessar lens, Kodamatic shutter, speeded ½ to 1/150th sec. Cost £18 ..... **£2 19 6**

98642. P.C. Kodak Special, f/6.3 Ross Homocentric lens, Compur shutter, range-finder. Cost £8 ..... **29s. 6d.**

REFLEX and FOCAL-PLANE

6035. 9 × 12 cm. Zeiss Miroflex Folding Reflex, f/4.5 Zeiss Tessar lens, focal-plane shutter, 1/3rd to 1/2,000th sec., F.P. adapter. Cost £58 5s. **£22 10 0**

6063. 3½ × 2½ **T.-P. Special Ruby Reflex,** f/2.9 Ross Xpres lens, focal-plane shutter, 1/10th to 1/1,000th, Stevens' screen, reversing back, swing front, F.P. adapter, Riteway roll-holder, 1 slide and case. Cost £35 19s. 6d..... **£7 7 0**

5936. ½-pl. T.-P. Zodel Reflex Camera, Steinheil f/3.6 lens, focal-plane shutter, 1/10th to 1/1,000th sec., revolving back, 3 D.D. slides, canvas case. Cost £23..... **£5 5 0**

5003. ½-pl. Soho Reflex (latest model), f/3.5 Ross Xpres lens, focal-plane shutter 1/16th to 1/800th sec., revolving back, masking device, 3 double dark slides, F.P. adapter, leather case. Cost £42 10s..... **£23 0 0**

5845. ½-pl. Graflex Reflex, f/4.5 Kodak anastigmat lens, focal-plane shutter, 1/10th to 1/1,000th sec., revolving back, F.P.A., cut-film sheath, black case. Cost £25..... **£7 19 6**

5479. ½-pl. Popular Pressman Reflex, f/4.5 Ross Zeiss Tessar lens, focal-plane shutter, 1/15th to 1/1,000th sec., 3 slides. Cost £18.. **£3 19 6**

5667. ½-pl. T.-P. Special Ruby Reflex, f/4.5 Aldis lens, focal-plane shutter, 1/10th to 1/1,000th, 6 single metal slides. Cost £25..... **£3 17 6**

5711. 3½ | 2½ **Mentor Reflex Camera,** f/4.5 Zeiss Tessar lens, focal-plane shutter, 1/8th to 1/1,300th sec., 3 D.D. slides, F.P. adapter and leather case. Cost £25..... **£6 6 0**

5691. 3½ × 2½ **Mentor Reflex,** horizontal model, f/4.5 Zeiss Tessar lens, focal-plane shutter, 1/14th to 1/1,300th sec., 3 D.D. slides, roll-holder, F.P. adapter, leather case. Cost £30..... **£6 6 0**

3021. 3½ × 2½ **Soho Reflex,** latest model, f/2.9 Pentac lens, shutter speeded 1/18th to 1/800th, sec., F.P. adapter and leather case. Cost £37 10s. **£16 16 0**

3972. ½-pl. Tropical Model Adams' Reflex Minex, f/4.5 Zeiss Tessar lens, focal-plane shutter, 1/8th to 1/1,000th sec., 1 D.D. slide and F.P. adapter. Cost £55..... **£12 12 0**

5779. ½-pl. Popular Pressman Reflex, f/2.9 Dallmeyer Pentac lens, focal-plane shutter, 1/15th to 1/1,000th sec., 3 D.D. slides. Cost £20..... **£7 19 6**

5840. ½-pl. Ensign Special Reflex, f/4.5 Trinar lens, focal-plane shutter, 1/15th to 1/1,000th sec., revolving back and F.P. adapter. Cost £15 **£3 19 6**

5213. ½-pl. Ensign Popular Reflex, f/4.5 T.T. & H. Cooke lens, focal-plane shutter, 1/10th to 1/1,000th sec., F.P. adapter and black case. Cost £15 ..... **£3 19 6**

5352. 9 × 12 cm. Minimum Palmos Press Focal-plane, f/4.5 Zeiss Tessar lens, shutter speeds 1/10th to 1/1,000th sec., 6 D.D. slides, black grained case. Cost £27 10s..... **£8 8 0**

5315. 9 × 12 cm. Contessa Nettel Press Focal-plane, f/4.5 Zeiss Tessar lens, shutter speeds 1/3rd to 1/2,000th sec., tripod head, 3 D.D. slides, F.P. adapter, ½-pl. adapters, velvet-lined black grained case. Cost £57 15s..... **£25 0 0**

5766. ½-pl. Goerz Anschutz Press Focal-plane, f/6.8 Goerz Dagor lens, shutter 1/10th to 1/1,200th sec., 3 double slides and case. Cost £15 **£3 18 6**

2779. 3½ × 2½ **Minimum Palmos,** f/4.5 Zeiss Tessar lens, focal-plane shutter, 1/15th to 1/750th sec., black case, 3 slides and F.P. adapter. Cost £38 ..... **£9 19 6**

5846. 5 × 4 Ross Panros Press Focal-plane, f/6.3 Ross Homo lens, shutter speeded 1/15th to 1/1,000th sec., 3 D.D. slides. Cost £20 **£3 3 0**

HAND AND STAND, ETC.

3849. 5 × 4 Sanderson Hand and Stand Camera, f/6.5 Detektiv Aplanat lens, 6-speed Automat shutter, triple extension, rising and swing front, 3 D.D. slides, canvas case. Cost £15.. **£2 17 6**

6030. ½-pl. T.-P. Royal Ruby Field Set, triple extension, Ross Teleneg, setting No. 3, rack focussing, 3 D.D. slides, canvas case. Cost £25 **£4 17 6**

3994. ½-pl. Field Camera, f/8 R.R. lens, iris mount, rising front, reversing back, 1 D.D. slide and case. Cost £5 ..... **12s. 6d.**

5955. ½-pl. T.-P. Ruby Field Set, f/6.5 Cooke lens, R.B. shutter, rising front, tilting and reversing back, 3 D.D. slides, leather case. Cost £25..... **£6 0 0**

5862. ½-pl. Perken and Rayment Field Set, R.R. lens, 5 D.D. slides, canvas case. Cost £4 10s..... **22s. 6d.**

1141. 12 × 10 Field Set, conical bellows, double extension, 3 double slides. Cost £20 **£2 10 0**

CINÉ CAMERAS

5963. Bell & Howell Filmo 70A 16-mm. Cine Camera, f/3.5 Dallmeyer lens, focussing mount, speeds 16 and 32, leather case. Cost £47 10s..... **£9 9 0**

5833. Victor 16-mm. Cine Camera, f/1.9 Dallmeyer lens, leather case. Cost £40 **£9 9 0**

5702. Bell & Howell Filmo 70 DA 16-mm. Cine Camera, bronze model, 1-in. f/1.5 Dallmeyer speed lens, turret head, 7 speeds, critical focusser, 100-ft. capacity, type B leather case. Cost £77..... **£37 10 0**

6088. Cine-Kodak Model B 16-mm. Cine Camera, f/1.9 anastigmat lens. Cost £35 **£12 12 0**

5748. Cine-Kodak BB Junior, 16-mm. Cine Camera, f/1.9 lens. Cost £18 18s..... **£10 10 0**

5836. Cine-Kodak Model B 16-mm. Cine Camera, f/3.5 anastigmat lens. Cost £25 **£5 5 0**

6023. Pathe 9.5-mm. de Luxe Cine Camera, f/1.5 Kino Plasmat lens. Cost £25.... **£8 10 0**

6044. Dekko 9.5-mm. Cine Camera, f/1.9 Ross anastigmat lens. Cost £10 18s. 6d... **£6 6 0**

5636. Ensign Auto Kinecam 16-mm. Cine Camera, f/1.5 Cinar lens 3 speeds, leather case. Cost £20 ..... **£11 11 0**

5579. Pathe Model B 9.5-mm. Cine Camera, f/3.5 anastigmat lens. Cost £6 6s... **£3 3 0**

5330. Zeiss Kinamo S10 16-mm. Cine Camera, f/2.7 Zeiss Tessar lens. Cost £20.. **£4 10 0**

3937. Pathe de Luxe Motocamera, 9.5-mm., f/3.5 anastigmat lens. Cost £10 10s. **£4 7 6**

5768. Pathe de Luxe Motocamera, 9.5-mm., f/2.5 anastigmat lens. Cost £16 16s. **£7 7 0**

5918. Cine-Kodak 8-mm. Camera f/3.5 anastigmat lens. Cost £9 17s. 6d..... **£7 7 0**

MAKING *Light* OF NIGHT PHOTOGRAPHY

FREE!

This interesting book, "NIGHT PHOTOGRAPHY — Picture Making at Night — Indoors and Out" — contains 28 pages of clear information with illustrations and diagrams.

UNTIL recently, the taking of snapshots was looked upon as a hobby for bright and sunny days; at any rate, as far as the majority of amateurs were concerned. But with the appearance of Hypersensitive Roll Films and Plates a new and fascinating phase of photography — Picture-making at Night — is brought within the amateur's scope. To-day — or should we say, to-night — any reasonably efficient camera will yield you fine 'night-snaps' if loaded with Selo Hypersensitive Panchromatic Roll Film or Ilford Hypersensitive Panchromatic Plates. Attractive pictures may be taken in the streets of towns and villages by ordinary outdoor illumination, and indoor pictures of domestic incidents and festive groups — just as easily as daytime snaps in summer.

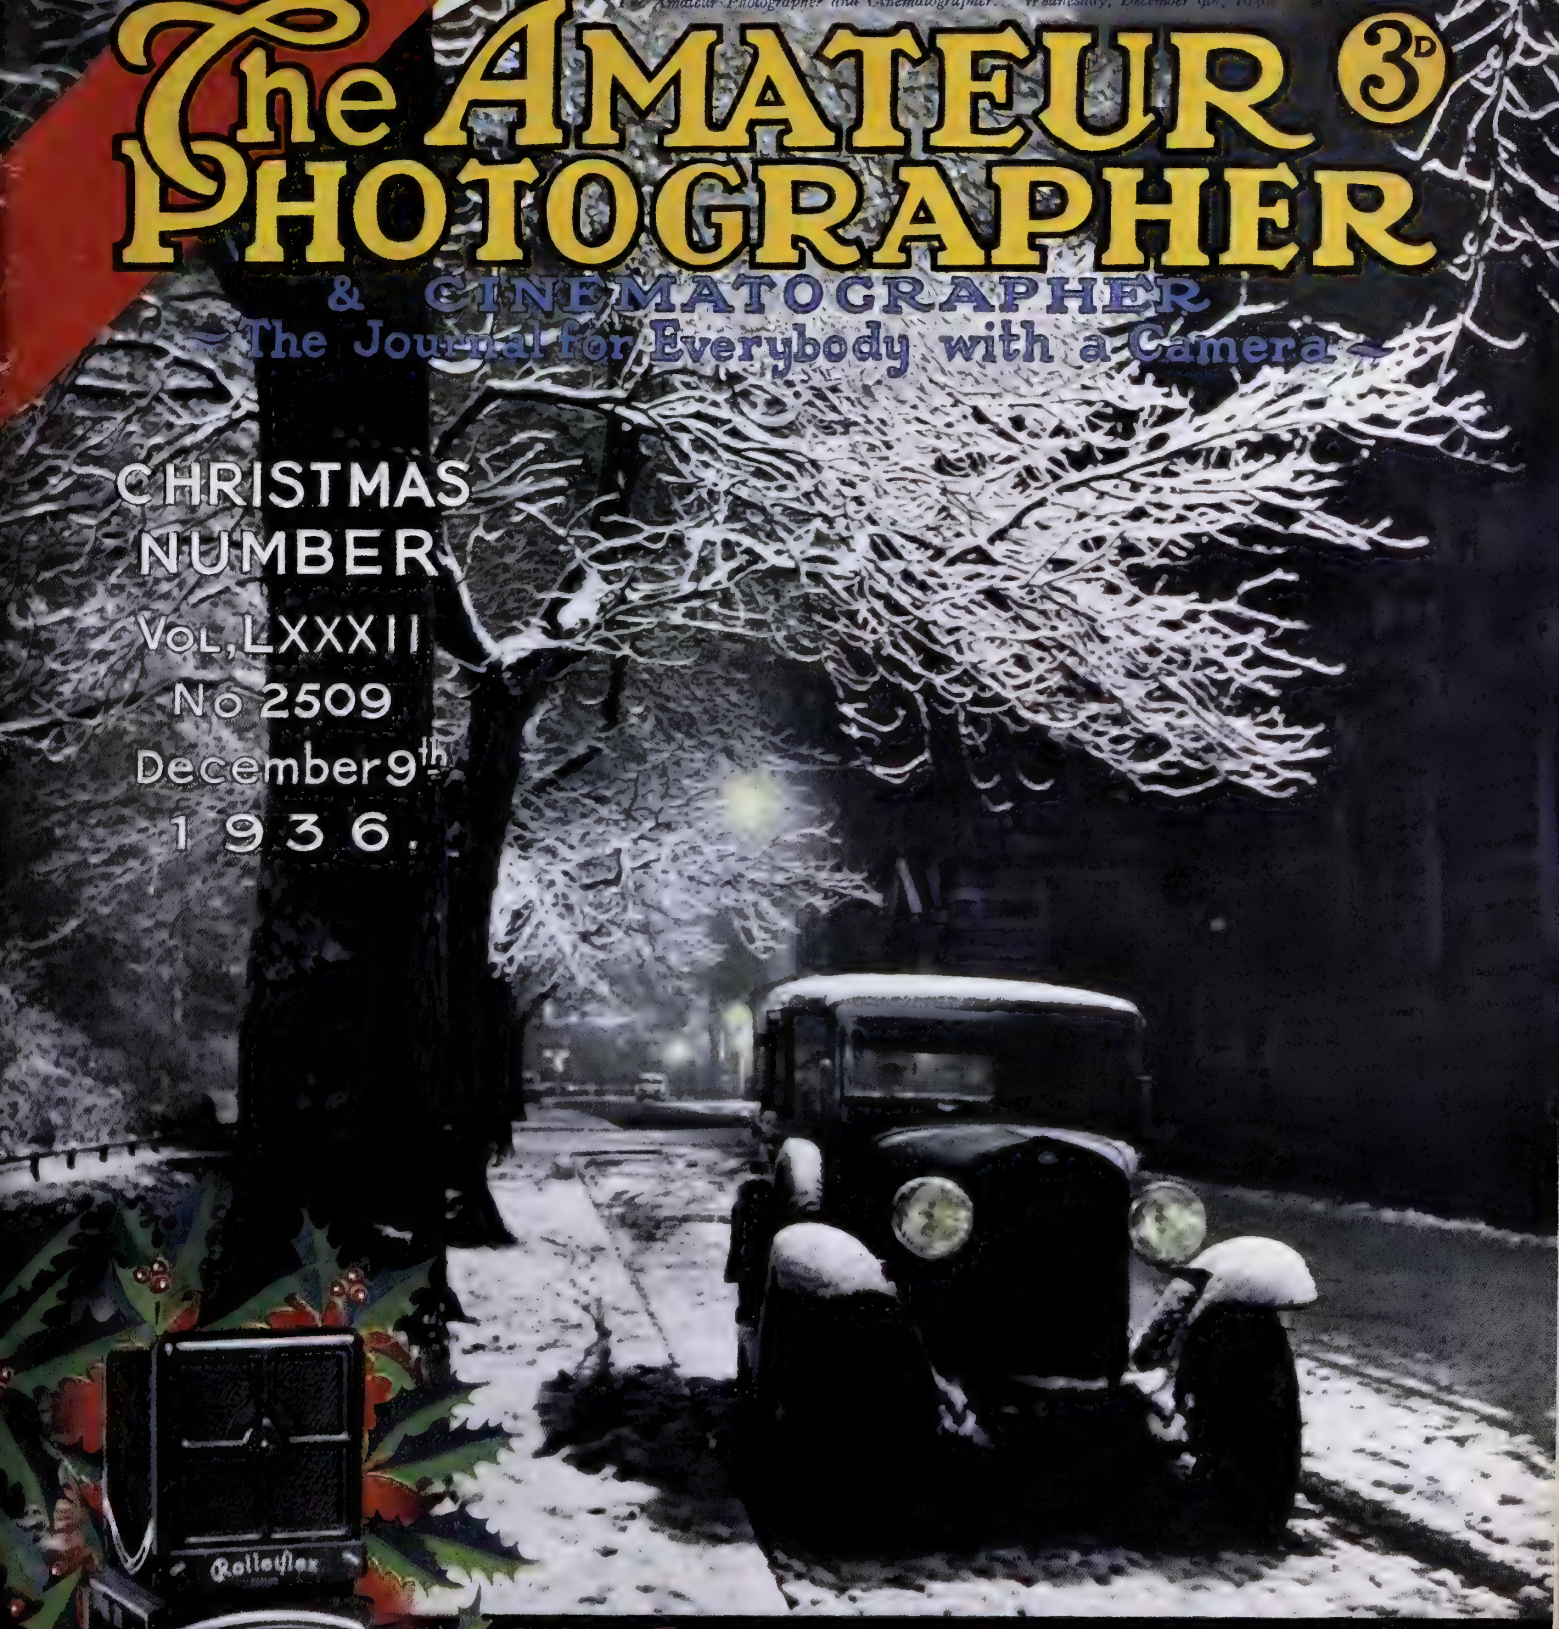
The Journal for Everybody with a Camera



CHRISTMAS NUMBER

Vol. LXXXII

No 2509

December 9th

1936.

Give a Rolleiflex

. . . The camera that captures the true spirit of Christmas. This wonderful instrument has won the big *Daily Herald* First Prize two years in succession (1935 and 1936)—that was for summer snapshots, but the above picture graphically illustrates its capacity for producing perfect pictures at any time. Every detail of the Rolleiflex has been designed to give perfect results with minimum trouble. It shows your picture full size and right way up on the ground-glass screen. Takes 12 pictures on 3½ × 2¼ shilling roll film. Adaptable for plates, 35-mm. cine film, and many other accessories which make it really versatile.

With Zeiss Tessar f/3.5 lens and Rapid Compur shutter speeded to 1/500th sec., T. and B. £25 0 0

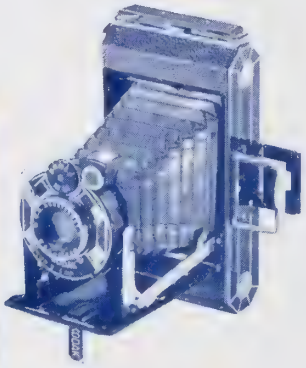
See it at your dealers, or write for literature from the Sole Importers :

R. F. HUNTER LTD., "Celfix House," 51, Gray's Inn Road, London, W.C.1

Phone : Hol. 7311/2

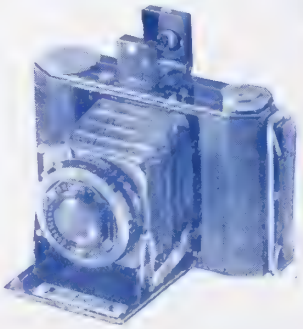
THE "RETINA"

The low-cost precision-made 36-exposure miniature camera. Schneider or Zeiss "Tessar" *f*3.5 lens, "Compur" or "Compur-Rapid" Shutter. Exposure counter, depth-of-focus scale; optical direct-vision viewfinder. Uses Kodak 35 mm. Film.



From £10 . 10 . 0

SIX-20 "KODAK"



The most popular British-made high-grade folding camera for 3¼ in. by 2¼ in. pictures; *f*6.3 or *f*4.5 lens, 3-speed or "Compur" Shutter. Direct and reflecting viewfinders. Finger-tip focussing down to 3½ feet.

From £3 . 12 . 6

Something really handsome *for Christmas*

- *To make a fellow enthusiast happy*
- *To suggest as the gift you'd like*
- *Or (if necessary) as your own gift to yourself*

SIX-20 DUO "KODAK"

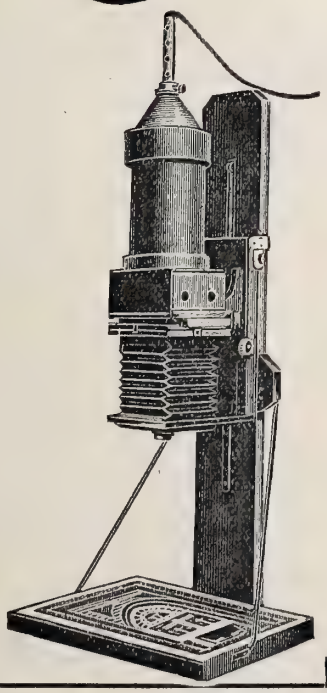
High-precision 'large miniature.' Takes 16 pictures on Kodak Film No. 620; *f*4.5 or *f*3.5 lens, 4-speed or "Compur" Shutter. Optical eye-level viewfinder; built-in depth-of-focus scale.

From £6 . 0 . 0

THE "REGENT"

'The Prince of "Kodaks."' Coupled rangefinder banishes focussing guesswork. Zeiss "Tessar" *f*4.5 lens, "Compur-Rapid" Shutter. Two-picture-size device—for 8 or 16 exposures on Kodak Film No. 620. 'Streamline' finish. Price includes carrying case.

£20 . 0 . 0



This makes a good gift, too!

A wonderful survey of photography in all its aspects, by Dr. C. E. K. Mees, Kodak Director of Research. Based on the lectures given by Dr. Mees at the Royal Institution last Christmas, this book deals with the history, science and practice of photography and cinematography in a simple, lucid way. Published by G. Bell & Son Ltd., it is obtainable from Kodak Dealers and Booksellers, price 7/6. Write to Mr. A. P. Taylor, Dept. 57B, at the address below, for a prospectus.

CHILDREN—THE SUBJECT FOR THIS WEEK IN THE WALLACE HEATON PHOTOGRAPHIC COMPETITION

A Rolleiflex Picture.

And what scope it offers! Children playing, laughing, crying, feeding, asleep, anything so long as it is children and is an attractive picture. Try your hand and send in your photographs. **YOUR SNAP MAY WIN £25.** Read the conditions:

EACH WEEK we give **£1 1 0** for the best print received.

EACH WEEK a different subject. Everybody has an equal chance.

EACH WEEK a chance of **selling** us your picture for **£2 2 0.**

AND FINALLY, all pictures received will be judged for the **First Award of £25 0 0.**

There are **no restrictions** as to make or size of camera or material used. It does not matter who developed and printed your entry. Prints or enlargements need not be mounted, and any size is eligible up to a maximum (over all) of 15×12 in.; but no faking is permitted, except ordinary "spotting" to remove defects.

The coupon must be attached to the back of the print, together with name and address of competitor, size and make of camera, and exposure data and film used if possible.

VICTOR II

THE HOME CINÉ TO BRING JOY TO THE WHOLE FAMILY!

Its performance excels that of projectors previously selling at twice the price. It has 4-point film protection. Victor's patented film trip, constantly on guard at all loop positions, automatically "kicks" operating lever into non-operating position before film damage can occur in any film emergency. Super Hi-power illumination. Super-efficient cooling. Four-in-one control for operation. Forward, reverse, and still picture devices. Cool running motor. Rack-and-pinion focusing with integral mechanical framer. Pilot light, lamp and motor switches, positive, full-range tilt, 2-way rapid rewind, etc. Standard lamp equipment is the 500-watt T-10 Mazda, but it will accommodate lamps of other wattages, including the powerful 750-watt. Weighs only 13 lb. Price **£42 0 0**

'TELEPHOTOGRAPHY'

A complete treatise on the new aid to photography and cinematography. Tele-shots give variety and add enormously to the interest of your films. Fully illustrated with tables, formulæ, etc. This authoritative book tells you how.

Yet another FIRST PRIZE for the

ROLLEIFLEX

By courtesy of the Isle of Man Publicity Board.

Rolleiflex

The charming and unusual picture above, taken with a Rolleiflex, won the first prize of £50 offered by the Isle of Man Publicity Board in their 1936 Open Photographic Competition. The winner is Mr. W. K. Chadburn, 16, The Crescent, Handsworth, Birmingham.

Rolleiflex thus consolidates its position as **THE** prize-winning camera. In 1935 it won for Mr. Jenkins the *Daily Herald* first prize of £2,500. In 1936 it won for Mr. Done the *Daily Herald* first prize of £3,000.

The Rolleicord, too, is a notable prize-winner. The first prize of £100 was recently awarded by the *Weekly Illustrated* to Mr. Kershaw for his picture taken with a Rolleicord. Numerous other prizes have been won by Rolleiflex and Rolleicord users—all in competitions open to any amateur with any camera. The moral is obvious—**get a Rollei Camera given to you this Christmas.**

Give a ROLLEI CAMERA

ROLLEICORD

ROLLEIFLEX

is a prize-winning camera because it shows the operator his picturef ull size and right way up, exactly as he will get it. Focussing magnifier gives a critically sharp image instantly. Rapid Compur shutter speeded to 1/500th sec., T. and B., Zeiss Tessar f/3.5 lens completes an instrument of remarkable versatility and precision.....**£25 0 0**

ROLLEICORD

(recently reduced in price) is in its general construction like the Rolleiflex. It shows the picture in the ground-glass screen just the same and is as easily manipulated. The Compur shutter is speeded to 1/300th sec., T. and B. With Zeiss Triotar f/3.5 **£16 10 0**
Or with Zeiss Triotar f/4.5.....**£14 10 0**

Rolleiflex and Rolleicord both take 12 pictures on 3¼×2¼ roll film for 1/-. **The square picture it gives is such an obvious advantage** in that it permits the picture to be trimmed to **any** shape in order to get the best artistic and pictorial result.

OBTAINABLE FROM ALL GOOD PHOTO DEALERS

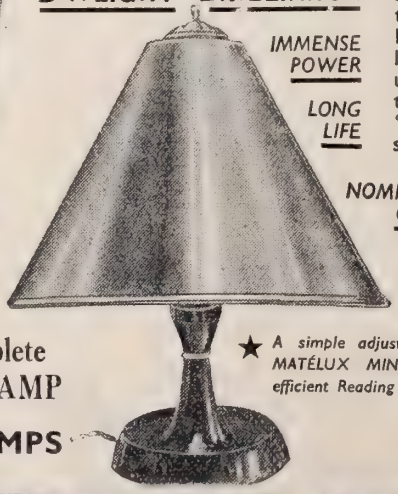
ANNOUNCING—MATÉLUX Minor

FEATHERWEIGHT OUTFIT OF *Amazing* EFFICIENCY



ACHIEVES 100 PER CENT SUCCESS

TRADE ENQUIRIES INVITED

FASCINATING INDOOR PHOTOGRAPHY—NOW OPEN TO ALL

DAYLIGHT BRILLIANCE

IMMENSE POWER

LONG LIFE

NOMINAL COST

TO-DAY, any keen amateur can, with the aid of a "Matélux" Minor Outfit, and at nominal cost, take an unlimited number of delightful indoor "snaps" offering charming and varied possibilities.

"Matélux" Minor and Reflector gives a brilliant light of great actinic power. Each lamp has a life of two to three hours, and burning only for a second or two per exposure, provides thousands of perfect photographs at astonishingly low cost.

Here is just **one** example of the practical possibilities of "Matélux" Minor; using an F/4.5 lens, light 6 ft. away, with an ultra-rapid panchromatic plate, 1/12th of a second suffices for the photograph to be taken.

"Matélux" Minor is both convenient and useful apart from its specialised sphere—**since it can be converted in a moment to the ideal desk or reading lamp.**

PRICE

10/6 Complete with LAMP

ADDITIONAL LAMPS 2/- each.

★ *A simple adjustment converts MATÉLUX MINOR into an efficient Reading Lamp.*

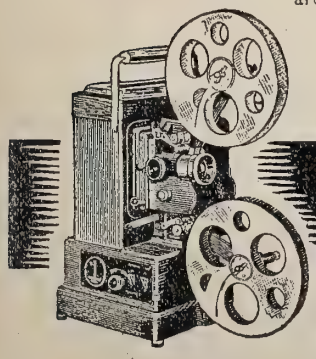
ANNOUNCING



The NEW PAILLARD-BOLEX G.916 with
FOUR-BLADED SHUTTER

IN TIME FOR XMAS!
Flickerless Home Movies!

This projector gives a standard of flickerless, noiseless home movies that will leave you amazed at its big step forward in projection technique. With mechanism equivalent to a four-bladed shutter, it projects at 12 *pictures per second*, yet flicker is reduced to the *point where it becomes negligible.* Motion is not appreciably slowed up, yet you get 25 per cent longer programmes from your films and many other important advantages. Give those Xmas film shows with a Four-blade G.916, and see what real "living pictures" are like without flicker.

Paradoxically, it is because the shutter of the G.916 is **two***-bladed and of special design, passing a very high percentage of light, that it can be geared up to give a* **four***-bladed shutter effect.*

PAILLARD-Bolex

Write for details to Dept. A.P.
CINEX LTD., 70, High Holborn, London, W.C.1

Model G.916, with Four-bladed Shutter, for projecting 9.5 and 16-mm. films, price with Dallmeyer 2-in. lens and 500-watt lamp..... **£47**

Gifts For Christmas

Here are a few suggestions from the large range of Ilford camera aids that make ideal gifts for your photographic friends. Ask your dealer to show you these books and other Ilford accessories.

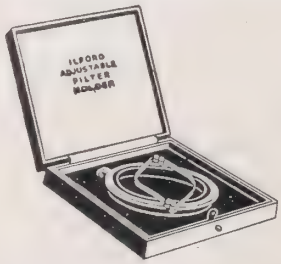
THE ILFORD MANUAL OF PHOTOGRAPHY

in the new enlarged and fully illustrated edition, covers every branch of camera work in its 25 chapters—each written by an expert under the editorship of Mr. G. E. Brown, F.I.C., Hon. F.R.P.S., 30 years Editor of *The British Journal of Photography* and *British Journal Almanac*.

From all dealers..... **2/-**
or 2/6 post free from Ilford Limited.

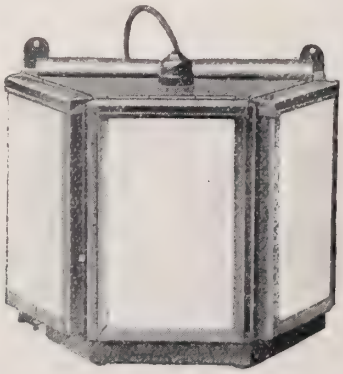
THE ILFORD SELO PHOTOGRAPHIC HANDBOOK

is invaluable to the beginner and experienced amateur alike. Profusely illustrated, it covers such subjects as the choice of a camera, the right film or plate to use—exposure, developing, printing, etc.



From all dealers **1/-**
or 1/4 post free from Ilford Limited.

ILFORD PHOTO-ELECTRIC EXPOSURE METER



Absolutely accurate exposures improve the work of any camera. The Ilford Photo-Electric Meter shows instantly the correct exposure for any subject under all conditions. For Plates, Cine Films and Dufaycolor materials.
Price, in neat leather case **£3.3.0**

ILFORD COLOUR FILTERS

There is a wide range of Ilford colour filters for landscape and general photography. Prices according to size. Full details of all Ilford Filters in leaflet, "Ilford Colour Filters and Adjustable Holders."

ILFORD DARKROOM LAMPS AND SAFELIGHTS

Safeguard good camera work with good darkroom lighting. Ilford darkroom lamps are made in many types, but have one characteristic in common—each ensures a high degree of illumination with perfect safety. Fully descriptive literature sent free on request.

The sign of  *Quality.*

Made in England by **ILFORD LIMITED, ILFORD, LONDON**

TOPICS *of the* WEEK

THE progress of photography in modern times has introduced a new feature into Christmas festivities. In the past the recording of the annual gathering was a matter for serious consideration and much preparation on the part of that member of the family who was an amateur photographer. Nowadays all that is changed; there will be probably many cameras in every house in which there is a Christmas party this year, and we venture to guess that at least one will be a "miniature." The miniature camera has put a new power in the hands of the indoor photographer, and our readers do not need to be told that the recording of many indoor subjects—such as a Christmas party—has become more and more simple by this means.

In this Special Christmas Number of "The A.P." many articles will be found that will suggest further Christmas activities for photography, that has, more than ever before, become an all-the-year-round hobby. This is the season above all others when the family gets together and home life is seen at its best. It is the ideal time to secure those personal records that may mean so much in future years. Apart from that, it is the season for giving and receiving presents, and in these pages suggestions will be found for solving this problem.

Several regular features that have been crowded out of this issue will appear as usual next week, and in the meantime, we take this opportunity to wish all our readers a happy Christmas—and Good Luck.

CAN THE CAMERA LIE?

THE competition with the above provocative title, that was held during the summer and autumn months and closed recently, brought in a very large entry of prints. Most of these were of excellent technical quality, and demonstrated beyond doubt that in expert hands the camera could produce "pictorial inexactitudes" that would be startling if used in evidence.

The rules of the competition made it clear that no double printing, combination or built-up prints or prints produced by the "control" method would be eligible; the photographic untruths must be "straight" prints from untouched negatives, and the rules appear to have been observed in every case.

The entries could be divided roughly into four classes: (1) unusual effects (i.e. lies), obtained by simple photography with a single exposure and no special preparations. (2) Prints in which tricks of perspective had been turned to account with single exposures. (3) Double exposures in which the same figure or figures appear twice in different parts of the picture. (4) Double exposures in which overlapping figures or objects or "ghost" effects have been obtained. Some of the last mentioned appear as illustrations to an article on "Ghosts" in this issue. Many of the others, however, are of extreme interest and examples of calculated ingenuity. We hope to publish a page of them shortly with comments on their method of production.

The winners are: First prize (5 guineas), Edgar Honnor, 3, Preston Avenue, Prescot, Lancs. "A Barefaced Lie."

Second prize (3 guineas).—G. R. Hinks, 4, Lindsay Avenue, Levenshulme, Manchester. "The Thief of Time."

Third prize (2 guineas).—W. A. Dovaston, Bowers Cote, Bowers Way, Harpenden. "The Double-jointed Tennis Player."

Fourth prize (1 guinea).—Edith Backhouse, 16, Sandhurst Grove, Harehills Lane, Leeds, 8. "Getting the Wind Up."

Fifth prize (half-guinea).—Kenneth A. Stott, Pendennis, Singleton Road, Salford, 7. "Gravity-Removing."

Hon. Mention has been awarded to prints by W. Watson Wright (Bournemouth), Miss L. Bowring (Guildford), D. N. Boothroyd (Southport), H. Mills (Bolton) R. C. Robbins (W. Drayton), G. E. Foster (Bradford), H. Mountford (New Barnet), S. E. Hart (Handsworth), F. Griffiths (Edgware), Mrs. W. E. Newham (Scarborough).

The Awards in our Special Novices' Competition will be announced in Next Week's issue of "The A.P."

Exhibitions and Competitions — CURRENT AND FUTURE.

The name and address in brackets indicates to whom to apply for further particulars.

Eighth International Salon of Photographic Art (Brussels).—Open daily (except Fridays) from April 3–18. (M. Devaivre, 152, rue Markelbach, Brussels, 3, Belgium.)

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

WHAT TO GIVE AT CHRISTMAS

Amateur photographers who are contemplating Christmas gifts for various friends, old and young, will find the suggestions offered in this article helpful.

AT this time of the year many people are exercising their minds as to the best Christmas presents to give to various members of the family or their friends. The variety provided from which to choose is bewildering, and while it is true to say that many Christmas gifts are put away and speedily forgotten, the ideal present should not meet with this fate, but be a constant reminder of the giver.

The readers of this paper are in a happy position in this respect, because they are able to make their gifts photographic; it does not matter whether the recipient is a photographer already, or is simply waiting to become one, a present of a camera will usually do the trick effectively.

The non-photographer can also be presented with a gift that will be certain to be valued. The range of presents need not be costly, an individual gift may cost a shilling or two up to as many pounds as the giver desires. One thing is quite certain—it can be both practical and useful.

Gifts for the Photographer.

It is one of the fascinations of the photographic hobby that its possibilities are never exhausted. There is always another process to try, a new field of work to enter, or new apparatus that will widen the amateur's scope. All this points to a means of acceptable giving.

A gift suited for a photographer may range from a camera or enlarger to some accessory of practical usefulness. Even if the photographer's equipment seems to be complete there are still possibilities. He may feel the need of a miniature camera, or some accessory if he has already "gone miniature."

Other items of equipment, amongst the many that suggest themselves as being of value to the practical worker, are an exposure meter, a developing tank for plates or films, lens filters, or a tripod. These are random suggestions. Others are an outfit for a trial of a colour process, carbro or bromoil. Many photographers would find use for a supply of their favourite plates or films, or some large-size bromide paper.

For the Non-Photographer.

It would be interesting to know how many photographers first had their attention directed to their absorbing hobby by the gift of a camera. There are many workers who intend to start, but who somehow do not make the effort to secure apparatus for themselves. But if a camera is placed in their hands they will certainly make use of it, and will very probably fall under the photographic spell so completely that they will proceed to carry out their own developing and printing, and end by becoming enthusiastic exhibitors.

Here is another opportunity to start the "snapshotter" along the road to making his own negatives and finishing his own prints. A developing tank, or a simple outfit containing everything necessary, can be purchased for a few shillings. It is safe to assume that such a gift will be taken full advantage of.

Often camera users are heard to remark "I should like to do my own work but I have not the necessary apparatus." Here is an opportunity for the bestowal of a gift which will show discrimination. Obviously, the outfit should contain everything necessary for the development of negatives and the making of prints. A developing tank in itself is of little use if the camera user has not already possessed himself of dishes, printing frames, etc. If it is felt that the camera user will not be able to finish his own exposures, it is still possible to assist by accessories, such as a tripod, self-portrait attachment, an album, or an outfit for colouring prints.

For Young People.

It is more than ever necessary in these days that gifts for young people should have a practical use, and they are less easily satisfied than was the case thirty years ago. Almost all young people want cameras, and photography now receives encouragement at most schools.

It is realised that a camera trains the mind and the eye. A boy or girl at school is in a position of being able to secure personal records of places, scenes and incidents, to say nothing of portraits, that will increase in value as the years pass. We may visualise the delight that a school snapshot of someone famous will have for the boy or girl who has taken it, and the pride with which the early effort will be shown.

If the boy or girl has a camera, the gift may well take the form of the much-desired "better" camera, or some wanted piece of equipment as suggested earlier in this article.

Plates or films likewise make an inroad into juvenile pocket-money, and a supply of these will be sure of appreciation.

Never before in the history of photography have there been so many books dealing with its various phases. In addition to works devoted to technical subjects there are volumes devoted to reproductions of the best photographic work. Amongst the latter, *Photograms of the Year*, published at "The A.P." office, takes first place, containing as it does reproductions of the best of the year's pictorial photography. It will be very surely received with gratitude, and studied with profit by the photographer who is interested in this branch. "The A.P." Diary will also be a much-appreciated gift by every amateur photographer and will become a constant companion.

If the photographic friend is not already a reader of "The A.P." a year's subscription will indicate practical wisdom and serve as a weekly reminder of the giver.

Photographs as Gifts.

A gift of a photograph strikes a personal note that is lacking in many gifts of a commercial nature. A carefully-selected subject which is known to attract the recipient, enlarged, carefully mounted and framed, will be appreciated. The work may be done by a photographic dealer, and is an ideal gift, especially for those far from home.

Lastly, the reader's attention is specially directed to "The Buyer's Guide," given in another part of this issue. In this will be found endless suggestions for gifts of all kinds for anyone interested in photography, and to suit all pockets.

FROST and SNOW

By F. J. WRIGHT

A Snowclad Country Lane.

WITH the coming of Christmas there is always the possibility, even with our uncertain climate, of frost and snow, and the amateur photographer will find that pictures made under such winter conditions will be among the most beautiful that he can ever find. Even the dreariest vistas of ordinary, everyday life are transformed into fairyland under the merciful curtain of glittering white; in fact, it is often these workaday scenes that he should look for.

The country is always beautiful under snow; but it is the myriad crystals of frost gleaming on roofs sloping away from one's own bedroom window that may make an exhibition picture. In fact, frost pictures are frequently more attractive than those in which a heavy snowfall is recorded.

The Farmyard in Winter.

He need go no farther than his own street to find something which is really worth while. But if he wants something different from street scenes, a walk down a country lane will open new worlds of wonder. Street and roof pictures may require, for the most part, but an elementary knowledge of the art of "snapping," but country pictures, especially close-ups, will require a little more thought and preparation.

The problems of frost and snow pictures are mainly those concerned with composition, though we can always enlarge portions of the photograph that appeal to us. These winter subjects are perfect for black-and-white reproduction; in fact, black and white contrasts and intermediate tones are the picture.

That is why it is necessary to see that the frost is against a dark background—boughs against black hedges, not against the sky; ferns on a river bank, or grasses, or twigs of trees, against the black water. It is difficult to expose wrongly, for frost cannot appear whiter than it is, and no amount of exposure will lighten really dark patches.

For general scenes, 1/25th of a second at f/8 should be sufficient on a bright day, but close-ups of ferns or other plants will also come up well with a snapshot exposure.

Frost.

As to conditions, the mist that hangs about when frost is lying should be taken note of. It will prevent sharp distance snaps, but, on the other hand, it will lend romance to a vista. Frost disappears as the sun gets warmer, and it is nearly always necessary to be up early in the morning. And it is as well to give an eye to one's lens occasionally, condensation may cause a film to form over it, or frost crystals shaken from a tree may drop on it.

Early morning frost and Ploughing.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

GHOSTS

By
LEONARD G. HONE

A Seasonable Subject for Photographic Experiment

Fig. 1. Literally a "Sheeted Ghost."

TO take a photograph of an authentic family ghost would probably be both difficult and hair-raising. No one could tell how the spectre would regard so new-fangled a contraption as a camera. But if we have no ghost to photograph, we can still produce a picture of him, for with the aid of a little ingenuity and time it is an easy matter to make quite weird ghost pictures. We are all, no doubt, familiar with this form of faking at the cinema, but there is no reason why these pictures should be left entirely to the professional illusionists.

They can be made with any type of camera, even with a modest box Brownie, and it is not necessary to fake the negative in any way by retouching, nor to use any kind of accessory—other than a tripod—with the camera.

Fig. 2. The Spectre Boy.

Fig. 3. The Haunted Hall.

The trick is performed by placing the camera on a firm support such as a table or a tripod and focussing up on what is to be the background of our picture. An exposure is then made on this, but giving only half of the total exposure required.

The "ghost" is then placed on the scene and made to take up the most suitable pose. A second exposure is made on the same film, again giving only half the adequate exposure, making certain that the camera remains absolutely fixed in position throughout the whole two-exposure process. If the ghost is to be of the classical "sheeted" sort it is, of course, simply a person draped in a white cloth, but by the use of period costumes or suits of armour "ghosts" of all kinds can be manufactured.

All illustrations except Fig. 1 are from our competition "Can the Camera Lie?"

We have no information as to the means used to produce Figs. 2, 5 and 6. We invite readers' opinions, and, if interest warrants, will publish details.

Fig. 4. In the Cloisters.

Weird and amusing effects can thus be obtained and, as the illustrations show, there is plenty of scope for originality, both in choice of background and of "ghost."

Fig. 5. The Headless Woman.

Exposures can be made either by artificial light or by daylight, but it will generally be found that the most convincing pictures are those taken indoors. After all, spectres and phantoms are usually associated with the Purple Room, the Picture Gallery, or the Main Staircase at midnight.

Fig. 6. The Invisible Man.

Panels for china lampshades are most attractive. Use dark prints, or they will not light up well.

A NOVELTY in PHOTOGRAPHS ON POTTERY

——a simple process for the amateur.

By **BERNARD ALFIERI, Jun.**

DECORATING pottery with photographs is an interesting hobby for winter months. Two methods are available; one involves making carbon prints, a process unfamiliar to most amateurs, while the other can be attempted with success by anyone who can make a print or enlargement on bromide paper. It is with the latter process that we deal here.

Special bromide paper is sold for the purpose, from which the gelatine film, complete with its silver image, can be transferred as a whole. The finished subject is an ordinary bromide print on china or glass, seen from the reverse side after the temporary paper backing has been removed.

There are several papers on the market, such as Kodak "Transferotype," or Ilford Dry Transfer Paper; the latter is described and used in the accompanying illustrations, although they both work on the same general principles.

The bromide paper has been coated with a film that can be stripped, and having sized the object or material on which it is to be used, which may be glass, china, metal, wood, silk, or any other support selected, it is stuck film down to it and the paper backing is removed. Preparing the material varies slightly according to its nature, but in the case of pottery, either a solution of gelatine or diluted "Seccotine" can be employed.

In preparing prints destined for transfer to an opaque surface such as a plate, where they will be viewed by reflected light, they are made of normal depth. But where, as for a lampshade, they are to be seen by transmitted light, they should be made very considerably darker. Then, too, it must

Fig. 1.

Fig. 2.

Fig. 3.

Fig. 4.

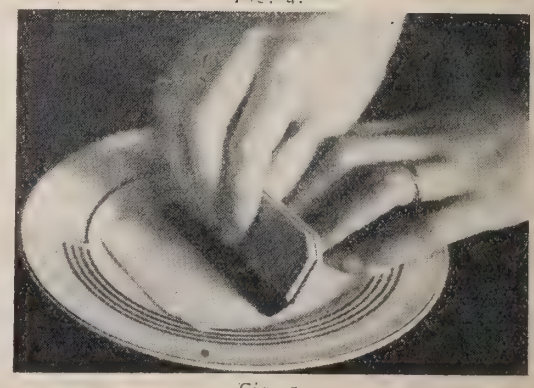

Fig. 5.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

CHRISTMAS PRESENTS

Two plates decorated in the way described.

be remembered that the transfer will reverse the subject as regards left and right, but this can be allowed for in advance by printing the original the wrong way round. The whites on the picture will depend on the support showing through, and it is advisable to use white or very light-coloured pottery if the subject is to be bright in appearance.

The first step is to prepare the china. For this we shall need either a 3 per cent solution of gelatine, made up by soaking 3 parts of gelatine in 100 parts of cold water, and then slowly heating until dissolved, or "Seccotine" dissolved in an equal volume of water. The latter can be used cold, and is to be preferred where the support is opaque.

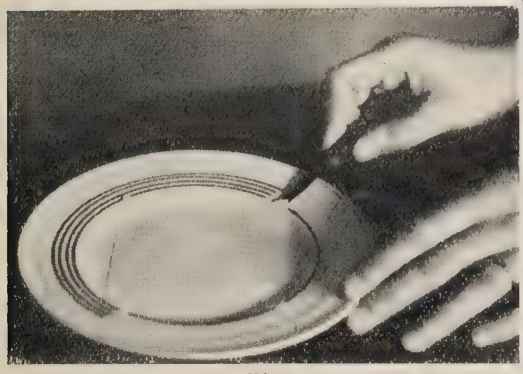

Fig. 6.

On objects where rounded surfaces are to be negotiated it is applied with a brush as shown in Fig. 1; but, except for the smallest pictures, domed surfaces must be avoided, as the paper support will not give to the curve, so making it impossible to transfer the picture satisfactorily. With flat surfaces as shown in Fig. 2, a small pool of the adhesive is poured in the centre.

Fig. 7.

The prints can be made in advance and dried, afterwards being well soaked before use, or they can be prepared at the time. After developing, fixing and washing in the usual manner, the surplus water is drained off and the wet print (Fig. 3) is laid down on the pool of adhesive as shown in Fig. 4. The print is placed in contact with the centre patch of size, and worked outwards, carrying the gelatine or "Seccotine" with it, until the surplus is wiped away from the edges. This method ensures that there shall be no bubbles left on the surface of the print. It is then slid into the correct position, and squeegeed down with a small flat squeegee, as shown in Fig. 5.

Fig. 8.

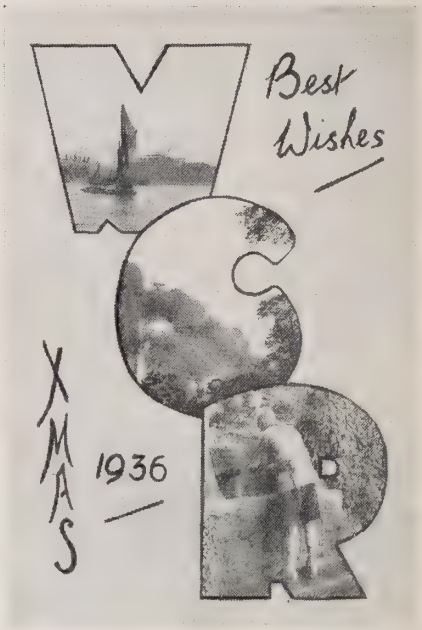
It is now left until quite dry, after which a corner of the paper backing is raised with a knife as in Fig. 6, and it is steadily pulled away, as in Fig. 7.

If any of the paper backing does not come away, it can be worn down by gentle rubbing with a wad of cotton-wool soaked in methylated spirit. The picture is cleaned by a tuft of cotton-wool soaked in petrol or benzine, as in Fig. 8, after which any small patches of the adhesive that may be left round the edge can be scraped away.

If the pottery is to be washable, it is necessary to apply one or more coats of crystal varnish (Fig. 9), otherwise the film will easily come away in water.

Where dark-coloured pottery is to be used, it is best to paint the part to be covered by the print with a white celluloid paint. In this case the transfer must be done as for celluloid or waxed surfaces. For these Messrs. Ilford recommend the following adhesive: 10 per cent solution of gelatine in glacial acetic acid, 2 oz.; water, ½ oz.; methyl alcohol (wood spirit), 40 oz. This solution is gently swabbed over the surface, and transferring is proceeded with as before described.

Fig. 9.



Readers' Hints, Tips and Gadgets

NEW IDEAS FOR CHRISTMAS CARDS.

TO many readers of "The A.P." who are making Christmas cards from their own photographs, the following idea may appeal as something a little out of the ordinary: A photograph is used as a cut-out which takes the shape of the lettering of the greeting itself. In order to make the most of the picture a squat type of lettering is best. The word "XMAS" is the most suitable as it is short and makes a neat cut-out, but, if preferred, another greeting or even your own initials can be substituted.

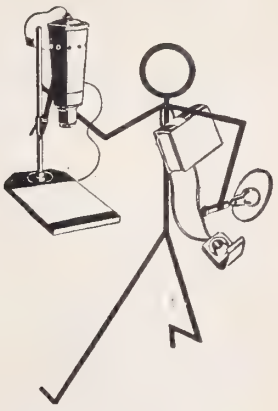
To make the cut-out it is advisable to paste the complete print on a piece of thin card. The shape of the cut-out is then drawn in pencil on tracing-paper, and when the best shape and size has been found it can be traced on to the mounted print with a hard pencil. This outline should finally be marked with indian ink to be quite distinct for cutting. This should be done with sharp scissors and a sharp pointed knife for corners.

Another idea is to use a number of contact prints, one for each letter. These are pasted on a mounting board or ordinary plain postcard and finished off with any further greeting that may be thought necessary. If many cards are wanted it can be copied when complete and straight prints made from the resulting negative. W. C. ROWSELL.

MAKING STATUETTES FROM PHOTOGRAPHS.

PROBABLY few readers have ever tried to make statuettes from their photographs. Yet these attractive novelties are quite simple to construct, and the only special tool required for the work is a fretsaw. A suitable print is glued flat on a piece of thin wood (about 1/8th or 3/16ths in. thick) and cut out in outline with the aid of the fretsaw. Three-ply wood is excellent for the purpose, being strong and inexpensive. The process of cutting out the picture is quite simple, and even those who have never previously used a fretsaw can obtain satisfactory results with a little care. This completed, all that remains to be done is to paint the edges of the cut-out with indian ink and mount it on a simple wooden base.

The process is particularly useful for dealing with figure studies which are spoilt by obtrusive backgrounds, since these do not appear in the finished statuette. All photographs do not lend themselves to the treatment; but every reader will find plenty of suitable subjects amongst his collection, and if desired these can be incorporated in attractive cut-out calendars as shown in the illustrations.

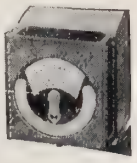


The cut-out shown in the centre is intended to be used as a ring stand for the dressing-table.

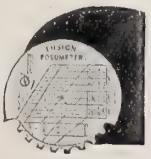
Such novelties as these make excellent presents for friends, since they combine a portrait with an object of utility; but, if desired, photographs of buildings or monuments may also be employed in the construction of match-box stands, book-ends, etc. For example, a statuette made from a photograph of a clock-tower could easily be made to take a small watch in place of the clock-face, which should be cut away.

R. DIXON.

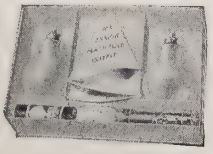
Christmas Gifts for Photographic He-men



By Ensign



1 SELF-PORTRAITS. Gentlemen who may wish, for some unknown reason, to put their own faces in the photographs they take, will find the ENSIGN AUTO-TIMER a very useful implement—just hangs on your camera and makes the exposure for you. Nos. 0 and 1 make snapshots, No. 2 makes "time" exposures as well. Prices, 4/6, 7/6 and 12/6.

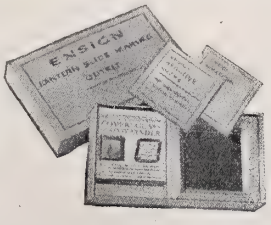


2 FOR CORRECT EXPOSURE. There's nothing like an exposure meter for measuring exposure (hot or cold) and the PHOTOSCOP, which so very accurately measures only the light on your subject and ignores all other light, however superior, saves you lots of money in wasted film, and it only costs (in a natty leather case) £3 17 6.

3 SO VERY ECONOMICAL. Of course, some people don't think it worth while to spend £3 17 6 just for the fun of getting correct exposures every time. Many photographers prefer their pictures under-exposed or over-exposed, or anything but right, but they won't grudge 1/6 for the ENSIGN POSOMETER—so thin that it slips in your waistcoat pocket without any difficulty. Price, in leather case 1/6.

4 LIGHT OPERATIONS. There's nothing like an ENSIGN FLASH-BULB outfit for catching people unawares and the most incriminating evidence has been collected by this means. No real photographer should be without one or he'll be missing a wonderful source of revenue from friends and others. All you do is just flash the bulb and take the picture, and no one knows anything's happened until it has happened, which is just the virtue of a photo flash-bulb. You can get a really "flashy" Ensign outfit complete with reflector for 5/6.

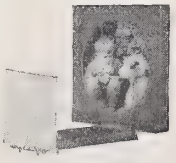
5 SYNCHROFLASH. Still more exciting are the ENSIGN SYNCHRO-FLASH outfits, with which you can take real high-speed snapshots indoors, and those unrehearsed Christmas incidents you would give so much to record (but which others would so willingly draw a veil over) need no longer go unrecorded when you can get the whole synchronising outfit for 27/6.



6 MULTIFLOOD. Rather more modern than Noah's flood, but nevertheless equally enveloping. Briefly, the ENSIGN MULTIFLOOD outfit provides enough light from any ordinary electric point to photograph a whole Christmas party, either before or after, and this marvel of ingenuity costs no more than 6/-.

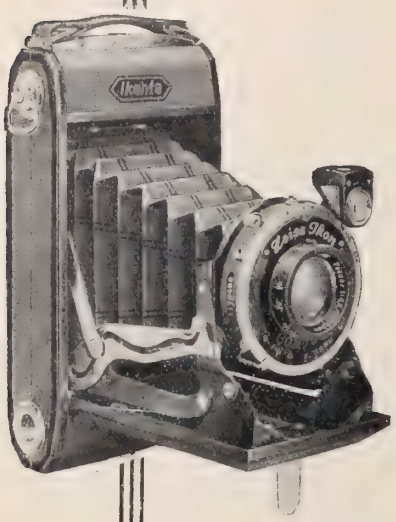
7 PHOTO HIGH-SPOTS. Photographic gentlemen are always susceptible to high-lights and ENSIGN SPOT-LIGHT outfits make special appeal. It enables them to feel the thrill of "bending the light" to their wills—a most invigorating sensation. Ensign Spot-light outfits, mounted on adjustable stand, cost £2 12 6.

8 SCREEN PICTURES. The real photographic he-man made lantern slides from his birth and others might be tempted to follow suit and see their pictures in the finest possible manner, namely, on the screen, if they knew an outfit containing all that is wanted to make lantern slides can be bought for 5/6. But there it is! The ENSIGN LANTERN-SLIDE MAKING outfit contains everything for the purpose, and will be gleefully accepted by anybody with a couple of winter evenings to spare.



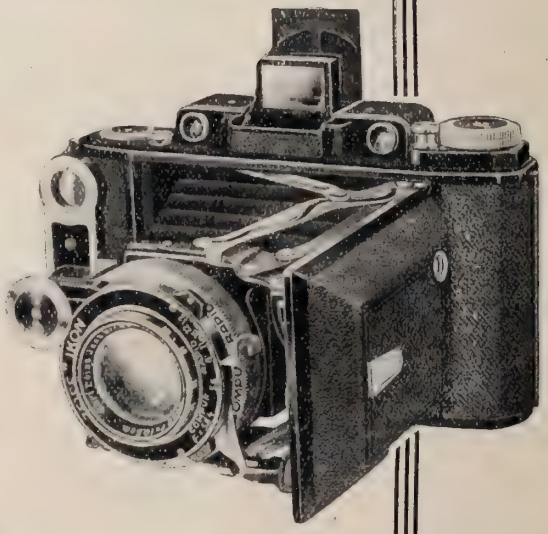
9 PICTURE CONSCIOUS. Lots of people don't know what to do with their snapshots when they've made them, and still more don't know what to say about other people's snapshots when they're shown them. But show them whole-plate size (8×6) pictures and keep them handily in an ENSIGN BOOK BOX on a book-shelf and they say "What lovely pictures you take"... Ensign Book Boxes make lovely gifts. Prices 1/-, 1/3, 1/6, 1/9, according to size.

10 TRAFFIC LIGHTS FOR THE DARK-ROOM. The TU-WAY Electric adapter combines red and white light and regulates the traffic in the dark-room admirably. Cuts out all the necessity to embark on the perilous journey to find the switch. Price, complete with opal lamp, 2/6.



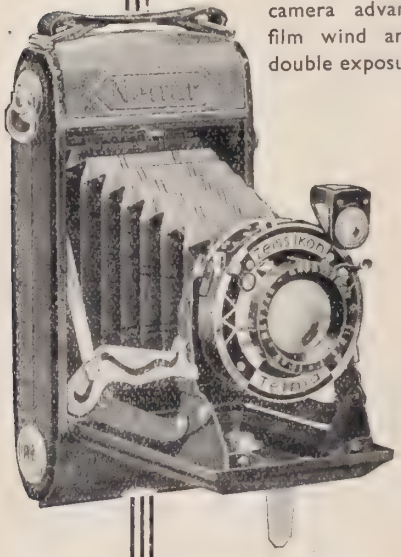
11 THE SNAPSCOPE. Real life-like pictures are secured with this handy little apparatus, which enlarges and gives a stereoscopic rendering to a snapshot. Consists of a concave mirror, mounted on a wood base, with spring holder for prints. Price only 3/6.

OBTAINABLE FROM ALL PHOTOGRAPHIC DEALERS: ENSIGN, Limited, HIGH HOLBORN, LONDON, W.C.1



The Choice of the discriminating giver

A gift that gives immediate pleasure not only because of its evident quality and elegant finish, but because it is ready to use for Christmas pictures, is a Zeiss Ikon camera. And it goes on giving pleasure, storing up the happy moments and capturing the sparkle of life for its possessor. A Zeiss Ikon camera is not a gift for the moment, but a present for many years to come.



IKONTA

● Body of aluminium alloy. ● Famous Zeiss Tessars and Compur shutters. ● Two-dot setting ensures that all pictures taken out of doors in reasonably bright light with 1/25th second exposure will be sharp and well defined for distances over 10 ft. ● Made in four sizes for the usual roll films. ● Prices, with Tessar f/3.5 from £10 10s. 0d., and with Novar f/4.5 from £6 2s. 6d.

SUPER IKONTA

● Equipped with Zeiss Tessars and Compur shutters. ● Focussing by coupled distance meter. ● Made in four sizes for usual roll films. ● Special models for $2\frac{1}{4}\times1\frac{3}{4}$, $3\frac{1}{4}\times2\frac{1}{4}$ and $2\frac{1}{4}\times2\frac{1}{4}$ pictures provide most miniature camera advantages. ● Including coupled film wind and shutter release, to prevent double exposures. ● Prices from £19 0s. 0d.

NETTAR

100 per cent self-erecting camera. ● Takes $3\frac{1}{4}\times2\frac{1}{4}$ pictures. ● All metal body. ● Two-dot setting of focus and stop for snapshots. ● Hinged back. ● Zeiss Ikon quality anastigmats and shutters. ● Prices from £2 12s. 6d.

Ask your dealer, or write to us, for a copy of the new Zeiss Ikon publication, "Photography all the year round." Your local dealer stocks and will be pleased to demonstrate Zeiss Ikon apparatus to you.

"MINIATURE" NOTES

Short articles, illustrations, hints and tips, formulæ, reviews, queries and replies dealing with Miniature Camera work will appear under this heading every week.

At a Children's Party *with a* Miniature Camera

By K. REITZ.

NO other camera but a modern miniature can do full justice to such a subject as a children's party, but, as with all "kiddie" photography, making friends, entering into the fun of the games and gaining their confidence are also factors that will help to make successful pictures.

Do not "stalk" the little ones; they will resent it, or become shy. Make the "snapshot" part of the game, and if the camera is in evidence all the time they will gradually disregard it.

With a big-aperture lens and the fastest film the ordinary room lighting will serve for many shots; but if this is not good enough for, say, ¼-second exposures, a floodlamp can be introduced as part of the "illuminations." With a good floodlamp, and the room lights full on, 1/10th sec. at f/3.5 can be given. All the illustrations were made with a Rolleiflex at f/3.5 and 1/10th on S.S. pan. film.

If a larger stop is available so much the better—"action" can then be snapped, and if the light is sufficient, games that are not too robust can be attempted at 1/25th sec. But in this case a fairly large room is necessary to enable the photographer to get far enough back to avoid a crowded foreground. Single figures or small groups generally make the best pictures.

An old English custom.

"Have this one with me."

After the party—tired out.

"... and so to bed."

Christmas Shopping and the Miniature

By A. L. M. SOWERBY.

Artificial-light Shots at f/2.

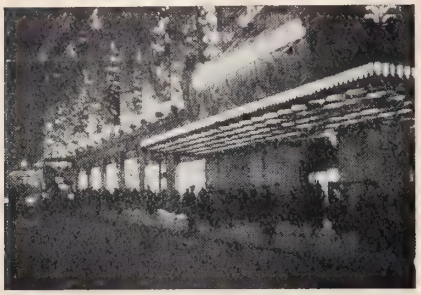

Fig. 1. Crowds at Selfridges. F/2, ¼ sec., Agfa ISS film.

THE illustrations accompanying these notes represent the result of a few hours spent in trying to find some subjects illustrative of the theme of Christmas shopping in London. For this the Leica was loaded with a length of the fastest panchromatic film available, and at about six o'clock in the evening the one-man expedition started.

Selfridges seemed a likely shopping centre, where there would be plenty of people shop-gazing and plenty of light to take them by. On arrival, some disappointment was felt; the number of people was inconveniently excessive, traffic was a nuisance, and the lighting from the windows, and especially from the portico over the main entrance, turned out to be much less than had been hoped.

After much waiting for the traffic to subside, Fig. 1 was taken from an island in the centre of Oxford Street. The exposure was ¼ sec. at f/2, sufficient steadiness being obtained by leaning against the lamp-post on the island. It will be noticed that although the windows light up the far side of the figures fairly well, the near side, relying on street lights only, is practically black.

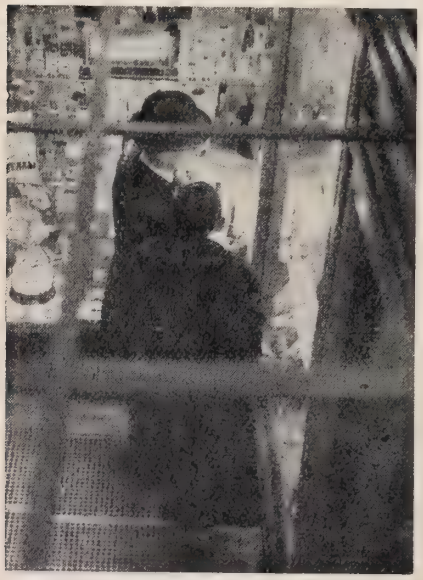

Fig. 6. Taken upwards into a mirror. F/2, ⅛ sec., Agfa ISS film.

Fig. 3. An attractive window. F/2, ⅛ sec., Agfa ISS film.

Noticing this, the next move was made to the arcade running from Regent Street to Argyll Street, where there would be windows on both sides of the shop-gazers. Figs. 2 and 3 were taken there, and, in spite of the shorter exposures, are quite adequately exposed by the standards of night photography.

Fig. 4. In Liberty's window. F/2, 1/20th sec., Agfa ISS film.

Wandering next down Regent Street, a model ship in Liberty's window attracted attention. With the lens-hood against the window to exclude reflections, 1/20th sec. was given at f/2. Fig. 4 shows the result; the negative would have been perfectly printable with a quarter of the exposure.

A little farther down Regent Street is Hamley's, the famous toy-shop. Fig. 5 shows a pair of youngsters discussing the relative merits of rival makes of model aeroplanes. It had an exposure of ⅛ sec. at f/2, and is very adequately exposed, thanks to the other lighted windows behind the boys.

Fig. 2. Shop-gazing in an arcade. F/2, ⅛ sec., Agfa ISS film.

At the inner entrance to Boots, a little farther along, there are very brilliant windows all round and a mirror overhead. It is this last that is responsible for the "new angle" shot of Fig. 6, taken (at ⅛ sec.) with the camera pointed steeply upwards at the mirror.

New-angle shots at night are so unusual that it seemed worth while to celebrate the occasion, for which purpose I then repaired to a very pleasant little club in the vicinity. My taste in alcoholic liquor may perhaps be discovered from Fig. 7, taken at ¼ sec. at f/2, in very bad lighting indeed.

A genuine "snapshot," too—the barmaid did not even know I had a camera with me till she heard the shutter click.

Fig. 5. Discussing model aeroplanes. F/2, ⅛ sec., Agfa ISS film.

After suitable refreshment, a belated supper and a tank of fine-grain developer conspired to fill in the rest of the evening, and when bedtime came there was the comfortable feeling that a number of quite excellent negatives were hanging up to dry.

Fig. 7. Pouring out refreshment. F/2, ¼ sec., Agfa ISS film.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

Focussing without Fuss

By G. K. SEAGER.

LOTS of people, especially those who change from a "fixed-focus" camera, become so fascinated with the delights of their range-finder that they forget it is only a means to an end. Others, again, seem to find difficulty in deciding just when the subject is sharply focussed, and push the lens in and out quite a number of times in their anxiety to get it just so. There is no need at all for all that effort, unless one's sight is faulty. If the image is sharp, it's sharp; if not, it is probably near enough—after all, the lens has some depth of focus. So stop, and get the picture while the picture is there to be got.

Get your "grip" right. Note finger on shutter release for quick exposure.

Half the trouble results from indecision, and the other half is caused by the lack of full control over the fingers. To make rapid focussing quick and easy, it is desirable to find out just which finger will operate the focussing knob most comfortably. Then that finger is used for that job, always and for ever. You will find that some of them work much more obediently than others.

It really does not take very long, with a little practice, to get into the habit of pushing (or of pulling) the focussing knob in the one necessary direction only. So soon as the double-image becomes one, stop; right or wrong, stop. A little concentration and determination, and the focus is just as likely to be right the first time as the fifth. The secret is not to push *past* the point of sharp focus. It is better to have a few negatives on an early spool or two slightly wrong than to lose dozens and dozens of pictures through hesitation all the rest of one's life.

Miniature Camera Gossip

By LANCELOT VINING.

That Growing "Miniature."

DECEMBER brings two new monthly magazines devoted to the miniature camera and its work; it looks as if the little fellow really has cause to be conceited.

I notice that one of the new-comers is calling any negative less than $3\frac{1}{4} \times 2\frac{1}{4}$ a miniature. I thought this would happen sooner or later—fancy calling a negative with an area of 6.64 square inch a miniature. I feel fairly certain that people who will agree with this have never used the real miniature camera and do not understand it in the least.

I cannot help asking myself whether miniature photography differs so much from photography in general as to warrant even one new magazine—let alone two. I know they will only be produced twelve times a year, but I believe that the Editor of "The A.P." has just about hit the nail on the head with the method he has adopted in dealing with the present miniature situation.

Try the Aquarium.

When a photographer told me the other day that the Zoo was no good for pictures during the winter months, I replied that this was where the miniature camera would score again. There are numberless photographs, and interesting ones, too, to be obtained in the different houses. The aquarium should not be forgotten; here my f/1.5 Sonnar has scored full points. The Contameter, which makes it possible to photograph even the smallest fish, should also go with you. You will need to use a fast panchromatic film, as the majority of the tanks are lit only by electric light. Also take plenty of patience with you, you will need it almost as much as your camera (see illustration).

Theatre Photography.

A correspondent has written for some advice about working in a theatre. His trouble is that by the time he has set his stop and shutter to suit the situation he misses the scene he was anxious to get. I have done a great deal of this kind of work, and have experienced all the troubles that go with it. You must make up your mind before the curtain goes up, taking into consideration the type of show to be presented, whether you are going to work with open lens and your shutter at the fastest speed the light will allow — this will make it possible for you to secure dancing, etc. —or whether you are going to work at, say, 1/10th and stop your lens down to suit the light, taking your pictures when there is no movement.

Windmill Theatre, f/2, 1/100th sec.

In the Aquarium at the Zoo, f/1.5, 1/25th sec.

To try and do both nearly always ends in failure, especially when you are seeing the show for the first time and have no idea what is coming next; the reason for this is simply that shutter speeds and stops are very difficult to see in a dark theatre. I have reached a point now when I can change a speed in complete darkness by feel alone, but it is always attended with a certain amount of risk, for there is no margin for errors in this type of work.

Cold Weather and Grain.

Now that we are getting some really cold days, you may have noticed an increase of grain. This may be caused by an unnoticed difference in temperature between your developer and fixing solution. Use a thermometer on both solutions, and you will often find that the latter needs warming up with a hot-point.

No Time Wasted.

A correspondent has written to ask me to tell him the quickest time in which I can produce an enlargement for press work. Here is a time-table I kept, so as to be able to answer his query.

I reached my dark-room at 4.30, film was in tank 4.34, fixer poured into tank 4.45, a quick wash and spirit-dry found the film in the enlarger at exactly 5 o'clock, and a quarter of an hour later five 10×8 prints left the electric drier. The film is then returned to the dark-room assistant for a real wash and fan-drying without spirit.

Enlarging Miniature Negatives

WITH AN ORDINARY ENLARGER.

LET it be clearly understood at the outset that the best method of enlarging miniature negatives is to use an enlarger designed for the job, either taking the lens of the camera in use or with a special lens. This need not, however, deter the amateur from attempting enlargements from his tiny negatives with his ordinary larger-size enlarger if he does not feel inclined to invest in a special instrument. The finished prints will be just as good, but more time, trouble and thought will have to be expended in making them.

The greatest difficulty arises in the effort to obtain the necessary critical focus. With a quarter-plate or $3\frac{1}{2} \times 2\frac{1}{2}$ enlarger, the distance from negative to easel necessary to obtain, say, a whole-plate enlargement from a Leica or Contax negative is considerable, and renders the image on the board so difficult to see that the worker who has been used to dealing with quarter-plates will have a job to decide when his little negative is in focus.

Fortunately, this is not an insurmountable difficulty. All that is necessary is to waste a negative by very much over-exposing it to a bright light or a blank sky, giving a negative with just a black expanse and nothing else. On this duly fixed and dried negative, make, with a very sharp penknife, a fairly large cross in each corner and another in the centre.

Inserted in our enlarger carrier, the focussing negative is sharply focussed so that the crosses are quite sharp, stopping down the lens of the enlarger if we cannot otherwise get both centre and corners sharply defined. When we insert the proper negative we may be sure that the focus is correct.

An ingenious amateur can slightly alter his carrier, in order to take his miniature films in the strip, by cutting a slot in each end, and making a couple of holding strips to take the place of the glass usually in the rebates of the carrier. These strips can be cut out of brass, the inside of the plates being lined with thick brown paper, and the centre being cut out the size of the film frame. This obviates the use of glass and so reduces the risk of white spots due to dust. A wire cage to hold the surplus film on each side of the carrier is not difficult to construct.

All miniature films should be treated with a hardening solution, and if this has been done there is little fear of them coming to harm in the enlarger.

The picture should be masked in the carrier, either by the special holder just described or by a piece of cardboard cut out with a sharp knife. It is a mistake to allow a quantity of white light to be projected round the little negative, because this white light is very likely to cause partial fog of the paper, especially if the negative is at all dense.

Vertical enlargers will probably have to be swung round to the opposite side of their supporting posts in order to get long enough distances between lens and paper, standing the instrument on a good-sized box, so that the image is projected on to the table. Horizontal enlargers to which the easels have been attached, as they are in some cases, will need to have the easel removed. The bromide paper can be pinned on a wall if the easel is not suitable for standing by itself. Care must be taken, however, that the enlarger is exactly at right-angles to the paper, otherwise distorted pictures will be the inevitable result.

The high degree of enlargement may mean that exposures are inconveniently prolonged. This can only be combated by putting in a stronger light, which may or may not be practicable.

There is just the possibility that the lens of the enlarger may be incapable of the very high degree of sharpness of definition necessary. Since minute definition is less necessary in larger negatives, this difficulty is most likely to appear in using an enlarger meant for quarter-plate or larger sizes. Definition can, however, usually be improved by stopping down.

E. A.

***Fine-Grain Developers* (6).**

METOL, GLYCIN, AND METOL-GLYCIN.

SINCE the early days of photography, glycin has always been regarded as a developer giving specially fine grain. Its chief application in modern fine-grain developers is in combination with paraphenylene-diamine, but it can also be used alone or in conjunction with metol. We give below a glycin formula, one more for metol alone, and one combined developer containing both.

Glycin Developer.

Water	20 oz.	(1,000 c.c.)
Sodium sulphite (anhydrous)	55 grs.	(6 grm.)
Glycin	18 grs.	(2 grm.)
Sodium carbonate	55 grs.	(6 grm.)

Mix in the order given, allowing each chemical to dissolve completely before adding the next.

Development time, 30 to 35 minutes at 65 degrees Fahr.

Gevaert Fine-Grain Formula G.D. 204.

Metol	115 grs.	(13 grm.)
Sodium sulphite (anhydrous)	1½ oz.	(65 grm.)
Potassium bromide	15 grs.	(1.7 grm.)
Water	20 oz.	(1,000 c.c.)

Development time about 16 minutes at 65 degrees Fahr.

Gevaert Fine-Grain Formula G.D. 2022.

Metol	7 grs.	(0.8 grm.)
Sodium sulphite (anhydrous)	235 grs.	(27 grm.)
Glycin	4 grs.	(0.45 grm.)
Sodium carbonate	205 grs.	(24 grm.)
Potassium bromide	10 grs.	(1 grm.)
Citric acid	7 grs.	(0.8 grm.)
Water	20 oz.	(1,000 c.c.)

Development time, 10 to 12 minutes at 65 degrees Fahr.

Miniature Matters

A selection of readers' queries that deal with "miniature" photography will be answered here every week.

PHYSICAL DEVELOPMENT.

In order to obtain as fine a grain as possible on Agfa ISS film, I propose experimenting with "physical development." There are one or two points on which I am uncertain.

(a) Should the film be desensitised in order to examine it, at the expiration of the developing period, without fear of fogging?

(b) If so, should the desensitiser be used before or after *the pot. iodide pre-bath?*

(c) The best temperature for this type of developer? I am using the buffered-borax M.Q. developer, but am not satisfied with the graininess of the negatives. I cannot enlarge above 6×8 in. without the grain showing. N. S. T. (*Southampton.*)

(a) If examination of the film at the end of development is to be of any practical value, you must be in a position to continue development if you find this desirable. Desensitising is necessary for this, though if you were to proceed instantly to fix the film the exposure to light would presumably do no harm.

(b) The best desensitiser for this is pinacryptol green or pinacryptol yellow, and the film should be immersed in it for the usual time *after* treatment in the potassium iodide pre-bath.

(c) It is recommended that physical development by the process you intend to use should be carried out at a temperature of from 65° to 70° Fahrenheit.

We would add that we are not satisfied that you are getting the best possible results from your present buffered-borax M.Q. developer. We ourselves have used this developer on ISS film, and have been satisfied, so far as grain at least is concerned, with our enlargements made to sizes considerably over 8×6 in.

DRYING MINIATURE FILMS.

In a recent article in a foreign magazine it was recommended that on hanging up a miniature film to dry the back should be wiped free from water with a clean dry handkerchief. I tried this, and found that the handkerchief clung to the back of the film in much the same way as it would have done to the front, and that the film became covered in fluff stuck tightly to it. Did I do the wrong thing? M. L. (*Winchester.*)

There is a misunderstanding here. It is fairly exident that, in the article to which you refer, "miniature film" meant *only* the 35-mm. ciné film used in the true miniature camera. The back of this film is simply plain celluloid, with no coating of any sort, and can quite safely be wiped in the way suggested. The ordinary roll film, as used in the 3×4 cm. miniature camera, is coated on the back with a layer of gelatine, the purpose of which is to prevent the film from curling.

We expect that by now you have removed the fluff from your film; if not, an hour's soak in water will doubtless remove it. You can use your hand, a wet chamois leather, or a "Viscose" sponge, to remove superfluous water from both sides of a film when hanging it up to dry.

EXAMINING MINIATURE NEGATIVES.

There is on the market a negative-viewing gadget, consisting of a negative holder and focussing eye-piece, for examining 24×36 mm. negatives. This piece of apparatus is, however, rather expensive. Can you suggest any cheaper substitute? W. B. (*Liverpool.*)

If you are content to dispense with the gate through which the film is drawn, and to have no more than a convenient magnifier for examining your negatives, we should suggest that a watchmaker's eyeglass, obtainable for half a crown or less at any good tool-shop, might suit your needs.

MAKING TEST STRIPS.

In making test strips textbooks tell us to increase the exposure geometrically from step to step, but I find doubling the exposure at each step gives jumps that are rather too large. On the other hand, adding constant extra time to each exposure gives too little difference between the strips on the long-exposure end. What procedure do you recommend? F. P. (*Ealing.*)

We suggest that you increase your exposures geometrically, but make each less than twice the preceding. A multiplier of roughly one and a half is convenient, making a series such as 5–8–12 or 7–10–15–22. To keep track of these odd exposure times it is useful to scribble them in pencil on the back of the test strip before development.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

How I make my EXHIBITION PICTURES

Methods and Ideals of well-known Pictorial Workers.

No. CCCLXIII.

Mr. L. J. HIBBERT.

From information communicated to our Special Representative.

"A MORE suitable title for this article might be 'How I make my Exhibition Negatives,' since the printing of them is a very small part of the story. In my opinion, no amount of manipulation and after-treatment will compensate for a bad negative in Zoo work.

"Perhaps the most important features in Zoo photography may be roughly classed under several headings: pose, lighting and texture, technical qualities, and likeness. The question of pose is more difficult than one would naturally expect. It is astonishing that many of the animals which are so naturally graceful in their movements should sometimes look so clumsy and unnatural in a photograph. It is, of course, often impossible to photograph them when they are actually moving, as all animals move extremely quickly. Sometimes, however, there is a moment when movement is arrested for just an instant, and if advantage is taken of this a picture full of action may be obtained.

"Texture in animal work is extremely important, and to obtain this quality it is necessary that the negative should be critically sharp, showing no movement, that the material should be sufficiently exposed, and that the subject should be nicely lit. A back lighting brings up the texture in furs in a very satisfactory way, but it is completely ruined if there is any light in the lens, so it is always advisable to use a lens hood.

"The matter of likeness is perhaps not seemingly important from exhibition point of view, but, to people who know particular animals, it is as important as it is to people who see photographs of their human friends. In almost all cases, however, where a negative is technically perfect and where the pose is a perfectly natural one, the photograph will be a good likeness, since animals are much more natural in front of the camera than human beings.

"One of the most difficult and trying problems in Zoo photography is that of backgrounds, and also that of shadows being cast across the animals by the bars. In the former case, retouching on the negative and shading in the enlarger may help a certain amount, but in the latter nothing can be done.

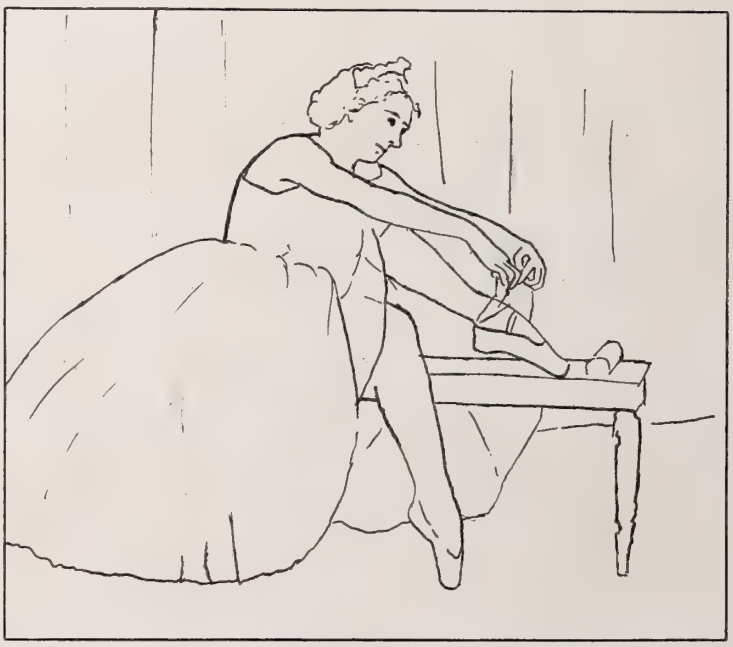
"As regards the technical details of the negative-making the size of the plate or film is of some importance. I use $3\frac{1}{2}\times2\frac{1}{2}$, $\frac{1}{4}$-plate and 7×5, as well as a Leica. The Leica is by far the most convenient to handle, but the small size means a loss of texture which is too great a price to pay for the mobility and speed of handling. The $3\frac{1}{2}\times2\frac{1}{2}$ is also convenient and inexpensive, but the same loss of texture and quality is apparent when enlargements of 15×12 or over are to be made.

"Quarter-plate is perhaps the ideal size for the ordinary worker. My own negatives are to-day made on a 7×5 plate, and I now prefer to carry and handle the large camera in spite of its weight and bulk, because of the ease of focussing the large image, and of the detail rendition from a negative that needs so small a degree of enlargement. Excepting the Leica, all the cameras which I have used have been reflex ones.

"The plates used are Ilford Hypersensitive Panchromatic, and the papers are chosen to suit the particular subject both in surface and colour. Most negatives are made with apertures of not more than f/5.6 or smaller. The speed of the Hypersensitive plates allows of shutter speeds of 1/75th of a second in quite ordinary light."

(A further example of Mr. Hibbert's work is reproduced on one of the centre Art pages.)

SNOWY OWL, "JOHN." *L. J. Hibbert.*



Pictorial Analysis

Every week the picture reproduced on the art page opposite will be analysed in detail for the benefit of readers of the paper who are seeking to improve their pictorial work.

"BERYL," *by Arthur G. Dell.*

ALTHOUGH, primarily, the intention is to provide a portrait, the picture in this case, while it admirably serves its purpose, is interesting in the finely luminous impression it conveys; is notable for the excellent management of the lighting from which that impression arises, and is characterised by a delicacy of key which enormously enhances the attraction of its presentment.

The main source of light comes from the right, from a fairly high position, and from a distance farther from the camera than the model, so that, to some extent, the figure is seen against it. In addition, there is a supplementary lighting, somewhat diffused in nature, that comes from the front. The first is directional and is responsible for outlining the head and limbs in light as well as lending a suggestion of transparency to the dress. Ostensibly, too, it conveys the impression of being the sole source of illumination—a fact that shows how well the subsidiary lighting has been contrived—while the latter not only has the effect of relieving the shadows, but also renders possible the retention of the high key.

Both play their part in conveying the feeling of luminosity, a quality which confers a high pictorial attraction upon the work, but there is a bit of a drawback in that, in order to get the main source into position, its effect has extended to lighten the right-hand side of the setting towards the edge, whereas, if that edge were in shadow, the interest would be more fully concentrated on the figure.

It is, no doubt, easy to be wise after the event, but it would have been quite a simple matter to have interposed a screen between the light and the setting. A small piece of brown paper, in an emergency, could have been attached to the lamp or lamps in such a way that, while it did not affect the influence of the lighting on the figure, it would throw a shadow on the portion of the background at fault and bring it more into line with the tone on the opposite side. It is a small thing, perhaps, but it is one that mars the perfection of the rendering in other directions, and, even now that the negative is made, it would be possible to adjust matters by shading the rest of the print during its exposure and allowing that portion to proceed a shade or so farther. If the subject is reprinted at any time, the point is one that should be kept in mind, and, if a similar subject is again essayed, the question of the lighting of the setting will, no doubt, receive the needed attention.

The grace of the pose and its beauty of line is self-evident, and, as far as composition is concerned, it is mainly a matter of placing. The head, as the main centre of interest, is made to occupy a position slightly to the left of the vertical centre line, which, as there is only the single figure, is perfectly acceptable. It leaves more space in front of the figure than behind, avoids anything in the nature of a suggestion of formality, and has an unquestionable strength of position. This strength is emphasised by the pyramidal formation the figure assumes as a whole, and the head is stressed as the predominant point by the fact that it occurs at the apex. A further factor of some significance is provided by the strong notes of the hair in contrast with the ornament with which it is graced.

All these elements tend to concentrate the major share of the attraction on the head, and, as they do so in no uncertain way, there is no doubt but that the arrangement is satisfactorily designed. Incidentally, the pyramidal form of the composition renders possible the adoption of a horizontal shape for the picture, which lends it a touch of novelty, for, as a rule, the vertical form is usually chosen for a portrait or figure study. The subject, too, is interesting on account of its seasonable associations, the party spirit of Christmas in dressing up and in the acting of charades being very well suggested.

In connection with the key, reference has already been made to the effect of the subsidiary lighting in modifying the shadows, and besides its effect in enabling them to be recorded in a light tone, a further contributing cause is the choice of a light-toned dress and setting. Everything, except the bench, has been selected with an eye on the aim in view, and, with the same object, the exposure would have been full and development restrained, while the printing paper would also have been chosen with the idea of avoiding contrast as far as possible.

Altogether, the intention has been very thoroughly worked out, and, as a result, we are presented with a very charming and delightful picture, attractive in its theme and dainty in the manner of its presentment.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

PICTURES by Novices

SOME CRITICAL COMMENTS on the Beginners' prints reproduced on the opposite page

THERE may be just a shade too much "foreground" in No. 1 of the prints reproduced on the opposite page—"Fruit," by S. Hughes—but it is a fault on the right side, and, in most other respects, the picture compares very favourably with any other on the page.

Subject and Setting.

Trimming so little as three-sixteenths inch from the base corrects the disability, and then the material forming the subject proper—the fruit—is shown in a happy relationship with an *adequate* amount of setting.

It is generally the case—and the fact is demonstrated elsewhere on the page—that the novice is inclined to over-emphasise the subject material or show it on too large a scale for its setting. The consequent suggestion of restriction, even if none of the essential elements are truncated, is a very serious drawback, and quite effectively kills any attraction that might otherwise be exhibited. It is far better to arrange for more than is actually needed to be included than to try and fit subject and setting to the size of the negative, for, besides providing a margin for subsequent adjustment, it allows a greater sense of freedom to be enjoyed when dealing with the subject, and, if the resulting print is small, recourse can be had to enlargement.

In this instance, there happens to be just a fractional margin all round. The print could, if it were thought that there was any need for it, be further reduced in size by something like one-eighth of an inch all round, but the present arrangement—subject to the alteration in the foreground—has a valuable feeling of spaciousness that, perhaps, it would be wise to retain.

Position and Spacing.

In arrangement, the relationship of the subject elements is well judged. Technically, too, the tone values are good, and there is no occasion for adverse criticism; but it is comparatively on account of its adequate allowance of space for the setting that the print attains the success it does.

No. 2, "The Broken Glass," by D. Dalal, has elements of the curious about it, but, otherwise, its interest is trivial. Its spacing, therefore, is scarcely material, but in No. 3, "Bubbles," by Wilfred Darby, the need for a more ample space in the setting is evident. It seems crowded and crushed in such a confined space, and there is nothing for it but to go to a greater distance from the subject in order that the disability may be corrected.

It is quite true that, in showing the bowl on so large a scale, detail is visible that would not be apparent in a smaller edition, but from the point of view of picture-making we are not so much concerned with detail—although it has its place—as we are with showing the subject so that, regarded as a whole, it makes up satisfactorily and well.

Prints and Pictures.

If a print is required for a commercial purpose, it may be desirable to show the material it portrays on as large a scale as possible, but, if the intention is to make a picture—and it is from this standpoint that entries to our competitions are judged—due regard must be paid to the considerations essential in pictorial work.

Good spacing is an essential element in any well-ordered composition. Sound composition is also essential in order that the motive of the picture may be clearly expressed, so that, if the chief item of the work is cramped for lack of space, the picture does not get across with its message as it should.

And this is why No. 1 succeeds as a picture and No. 3 fails. Similarly, with No. 4, "Light on Glass," by J. C. Jenkin, there is a sense of restriction arising from the absence of a sufficient degree of space below the group, and, though the degree is not so marked as in the former instance, it is quite enough to impair the pictorial appeal. The subject material, too, is rather scattered, and where there are a limited number of elements in a group it is wiser not to allow more than one to be separated from the rest. The edge of the table, perhaps, does provide something in the nature of a connection, but it is not wholly satisfactory; and it would have been better if the elements of the group had been placed not only closer together but also more in the same plane.

Harmony and Contrast.

Nevertheless, in its tonal values, the print is not unpleasing; but, when we turn to No. 5, "Cookery," by J. C. D. Corlett, we find a reversion to a lack of space in the setting, and the tones are inclined towards an excess of contrast in place of the harmony they might be expected to show.

Much of the excess of contrast could be corrected by the choice of a softer grade of printing paper—assuming it does not arise from under-exposure—but the required alteration in the relationship of the subject to the setting could only be adjusted by retaking from a much more distant point of view.

"Study" (6), by R. W. Morgan, is a bit better, though the upper portion of the setting is unduly intense, and there is very little margin above the top of the jug. A greater viewing distance is also indicated here, and, if the subject be repeated, the tone of the setting should be adjusted at the same time. A very dark background, such as this and that in No. 3, can occasionally be employed, but it needs strong tones in the subject and very careful leading up to. Speaking generally, it is better to endeavour to achieve a tonal harmony without having recourse to a similar degree of intensity in a secondary feature such as the background, reserving the stronger values for the subject itself.

Winter Work.

To keep in touch with photography during the winter months, even if it does not prove an end in itself, there is nothing better than a course of "still life."

It provides a means of extending a knowledge of composition; it affords the opportunity of learning to manipulate and control the lighting; it keeps the technical side well to the fore; and is of exceptional value in improving the general standard of the photographic work we do. It aids the acquisition of the pictorial point of view, and that success may be attained in this direction by every reader is the Christmas wish of

"MENTOR."

With the Beginners

NOTES AND NOTIONS FOR THE LESS ADVANCED WORKER

Every week an article will appear under this heading dealing with a topic of interest to the novice in photography.

The usual article for beginners has not come to hand this week, but we have received that given below. We hope that something more sane and practical will be forthcoming next week as usual.

CHRISTMAS PHOTOGRAPHY. By "The Walrus."

FOR many a generation Xmas has been the chief time of the year for carrying out special exercises of the jaw and the elbow, and detailed descriptions of phenomenal gorging and guzzling swelled the incomes of Dickens, Washington Irving and others, almost as much as the actual performances swelled the equatorial dimensions of their practitioners

I think that is a jolly good sentence to lead off with,

Fig. 0.008.

and if I can only keep it up this ought to be a fine article.

But I am aware that I have no more chance than a celluloid caterpillar in a fiery furnace, because I am compelled o drag in some references to photography, as is sometimes the case with the superannuated antique who generally fills this space—more's the pity. And if there is one thing more than another calculated to flop a wet blanket on Xmas revels and goodwill to men it is photography. Give me the choice between a stuffed turkey and a fine-grain formula, and I'm for the bird.

There was certainly a chance of some good sport in the Noels of the past when we took a flashlight photograph of he assembled gorgers and guzzlers. It made for high-speed movements on the spot, kept the insurance people on tenterhooks, and interrupted the seasonable orgies of fire-brigades. Now we just use a footling little lamp which makes no more noise than a fossil oyster, and does no more harm than making the faces of the sitters look like amorphous lumps of cheap chalk.

Fig. $7\frac{3}{4}$.

One of the illustrations (Fig. 0.008) suggests that as a gesture of goodwill it is a kindly precaution to see that all faces are mercifully masked before a photograph is taken. The faces (?) here shown were selected from a large number as the most intellectual and symmetrical available, so you can guess what the throw-outs were like. In the case of some of the females of the species their ideas as to the form and location of eyebrows are quite sufficient to make the use of large and opaque masks a *sine qua non*. I don't know what that means, but it has a festive ring.

Years ago the Noellian amateur never dreamed of taking people actually dancing. Even in a quiet measure like the polka the performers looked like a herd of mixed cattle attacked by hornets; and came

Fig. x^2+0.

Fig. 99.

in the category of very high speed work indeed, especially when they rebounded from the ceiling. The modern minifan can take such a subject easily, so that he has quite a soft job to record the flat-footed floppery miscalled dancing to-day (Fig. x^3+o).

Unfortunately, he is equally able to take such shady subjects (I refer mainly to the lighting) as that feebly suggested in Fig. 99. Nay, he is even able to snap the wretched spectre who prowls about in the dim light of his own phosphorescence (Fig. $7\frac{3}{4}$). In both cases, however, the said minifan stands a rosy—indeed ruddy—chance of being handed a severe clout in the iris diaphragm. (Cheers!)

Any sort of seasonable gathering is sure to contain at least one specimen of this minifan insect. If he sees a couple kissing he will say soppy things about making Contax, and would he Leicanother, and all that. He is also that species of two-legged ass who will throw a waste spool of film on to the fire while the host is standing with his back to it trying to thaw out his intellect.

I am sure that no one, even including myself, would dare to repeat the old advice that Xmas is an ideal time for the photographer to sally forth, and follow in the imaginary footsteps of that prize bore, G. K. Wenceslas, in search of winter landscapes (Fig. 1). The photographer of to-day is not such a fool as he looks. That is impossible. His most frantic sallies never take him beyond the reach of the cocktail department.

Fig. 1.

I feel like putting on an extra woolly vest when I remember the days when we poor photographers were literally driven forth into the icebound countryside by specious and fraudulent articles in photographic papers, some of which were contemptible enough to offer prizes for the best outdoor subject taken on Xmas day. Doubtless the writers and prize-danglers were heavily subsidised by doctors and undertakers.

Of course, I could have done much better than this if I had been allowed to keep off photography and tell a few tales instead. At the same time I shall be pleased if these practical and informative notes are found helpful. I shall be still more pleased if they are not.

A Beginner's Open Letter to the Editor

SIR,—On opening my *Amateur Photographer* at random, the chances are that my eye is immediately arrested by a full-page illustration of surpassing beauty. The photograph may be a seascape of furious waves lashing themselves against the background of an angry sky; or of some quiet corner in a sun-kissed garden; yet again it may show the slender figure of a young girl, the graceful curves of whose form are poised in a tribute to Art—it matters not which, for to me each is equally enchanting and I am lost in admiration for the man or woman who can take such photographs. I think to myself that if I could ever take a picture that was even one quarter as clever, I should rest contented for all time.

Occasionally I even turn to the cover page just to reassure myself about that word "Amateur," but there it is, clear as crystal, and I realise that I am looking at a photograph that has probably been taken by some quite ordinary looking person—even perhaps by someone whom I have actually seen in a bus or shop—and once again I lapse into my trance of silent homage.

Having studied every line and curve, I am about to turn to another page in order to gorge my insatiable appetite on more beauty, when my eye is invariably caught by some printed matter, which I start hurriedly to scan, and which I afterwards read very slowly and very deliberately.

Now, sir, at the risk of incurring your displeasure, I should like to ask, "Who is this fellow 'Mentor'?" Who is this inhuman monster who puts crosses and arrows and triangles and things all over *his* representation of these pictures and then proceeds to tell their unfortunate owners that if they had used a different kind of printing paper and given the negatives a longer exposure and stood the subjects upside-down and generally treated the whole thing in another way—they might have made less of a hash of things?

Does "Mentor" ever consider the anguish that he must cause in the home? Is it necessary for me to lay before you all the hideous details as I see them, and as you must see them, too, unless you are as callous as "Mentor" himself?

Can you not visualise the tragic little scene that must be enacted week after week at "The Laurels," "Mon Repos," or "The Nest"? Do you not actually hear brave little Mrs. Jones telling the hapless Jones that "Mentor" didn't really *mean* it like that, and that it was, after all, his job to criticise? I feel certain that she also explains that "Mentor" cannot know that Jones does all his developing in the pudding basins, or that there is no chance of a telescopic lens until Aunt Jessie dies. "In any case, darling, I like to think," she adds, "he is probably just a nasty fat man, with a bald head, who gets paid a thousand a year for making other people unhappy."

Or possibly the case is reversed and it is Smith, who returning late and tired from the office, opens the gate of "Dulce Domum," and is suddenly filled with an overwhelming love of his home and family. He thinks of his pipe, his slippers, and of the woman who brings him his domestic bliss. He flings open the drawing-room door assured of the greeting that is in store for him, but instead of the little cry of joy that he had expected, his ears are assailed by heart-rending sobs. There on the sofa, with a torn copy of *The Amateur Photographer* beside her, lies the huddled form of Mrs. Smith. "'M-Mentor' says I—I ought to have t-trimmed the print by half-an-inch all r-round," she wails, "and h-he says it sh-should have had t-two more seconds in the e-enlarger."

Need I proceed, sir? Perhaps I have already harrowed you overmuch and this may result in your taking unusually drastic action. I cannot profess a love for "Mentor" that I do not feel, but I am not so barbarous as to wish him ill, and I should hate to think that I am the cause of his instant dismissal from your staff. Indeed, whilst writing this letter, memories of my boyhood's days have been forced upon me and I can recall my headmaster assuring me that my chastisement caused him deeper suffering than it caused me.

Is it possible that I have wronged "Mentor"? Could he be a tall, thin gentleman with luxuriant curly locks and a kindly eye? Does he perhaps go through the torture of the damned each week as he fulfils his duties? Is it possible that he suffers more than Mr. Jones, more than Mrs. Smith, and—horror of horrors—more than I myself?

Should this be the case, sir, my heart goes out to "Mentor" in all its fulness—nay, I would urge that his salary be doubled.

Perhaps, also, in recognition of his services and sufferings, you could see your way to extending the length of his holidays.

—Yours, etc.,

A. A. B.

CHRISTMAS PRESENTS FOR ALL

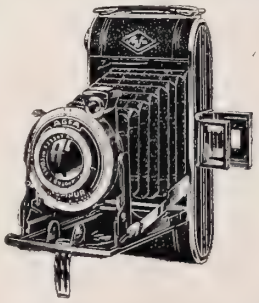
The Buyer's Guide

HERE are five pages of suggestions for Christmas Presents for amateur photographers. Cameras, accessories, materials and sundries are described, and at all prices to suit every pocket. The amateur cinematographer is not forgotten and many items to interest him are also included. The reader of this issue of "The A.P." will be hard to please if he cannot find something, either to give a photographic friend or (modern fashion) to suggest tactfully as a suitable gift for himself. A marked copy of the paper sent to the potential donor is a plan worthy of consideration.

The firms supplying the goods have been arranged in alphabetical order and each item illustrated is indicated in the letterpress with an asterisk. The addresses of these firms can be ascertained on referring to our advertisement pages. Application to any of them will bring further information and a seasonable catalogue. And now—"Good Hunting."

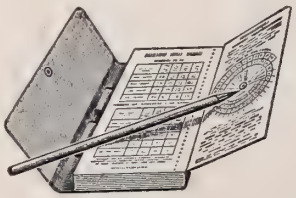
Actina, Ltd.

The "Dollina II"* is a fine instrument. It takes 36 exposures 1⅛×1, has coupled range-finder, Compur Rapid shutter, automatic counter and film-locking device operated after each exposure. The cost is £19 19s. Other suitable gifts are the "Dolly," 1⅝×1¼, from £3 7s. 6d.; "Super Sport A" for 2¼×2¼ and 2¼×1¾, with f/4.5 lens in Pronto shutter at £5 17s. 6d., or with f/2.9 in Compur shutter at £8 15s.; "Certix" 3¼×2¼, with f/7.7 lens in Vario shutter, at £3 3s., and the "Certos" enlarger for negatives to 4×4 cm., which has paper selector and exposure meter, f/4.5 anastigmat, and costs £8 8s.



Amateur Ciné Service, Ltd.

A number of accessories for sub-standard ciné work are offered by this house. Those interested in preparing well-edited and attractive ciné films, would welcome the "Wipaciné" Titling accessory. This enables "wipes" (or changes of title) to be made at any angle without winding back, masks, or risks of failure. The price is 30s. complete. "Fadeine," for fades on all makes and sizes of ciné film, costs 3s. 6d. per bottle.

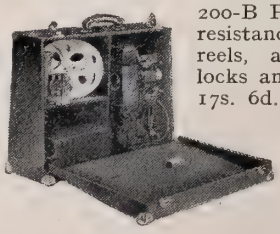


Agfa Photo Ltd.

Some attractive cameras are available as gifts at prices from 32/6 to £7 7s., so that all purses are catered for. At the lowest price the "Speedex Clack 51" takes 16 exposures on 8-exposure 3¼×2¼ roll film. It is collapsible and fits a vest pocket. At £7 7s. the "Speedex Compur"* takes 3¼×2¼ exposures, has f/4.5 anastigmat in delayed-action Compur shutter, optical and direct-vision view-finders, and spring shutter over the winding window. Other 3¼×2¼ cameras are "Speedex Clack 74" at 36s., and "Speedex Record" at £3 10s. The "Speedex O" at £5 5s. takes 2½×1⅝ roll films.

Burroughs Wellcome & Co.

Once again the "Wellcome" Photographic Exposure Calculator, Handbook and Diary,* is available. This invaluable aid to better photography has been relied upon by generations of old hands, and its reappearance is always hailed with delight. It would make a most welcome addition to some other photographic gift, its price in the U.K. being 1s. 6d.

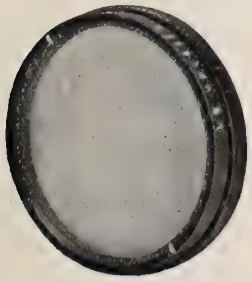


British Sida Cameras, Ltd.

A novel and inexpensive camera to give to one about to start photography would be the "Sida" Camera,* the price of which is 5s. The actual size of the exposure is 15/16ths in., but the results are quite capable of enlargement. This camera, which is British-made, has optical direct-vision view-finder, and an achromatic lens working at f/8. The film spool costs 1s., and holds 10 exposures.

The Camera Co.

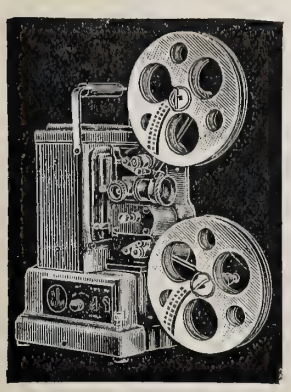
This firm is offering several suitable lines for seasonable trade. The "Vauxhall" De Luxe Carrying-Case,* which holds a Pathéscope 200-B Projector with resistance and spare reels, and has two locks and keys, costs 17s. 6d., carriage being 1s. 3d. extra. "Vauxhall" Super Reels, which hold 400 ft. of film, are obtainable in 9.5-mm. size at three for 5s. 9d.; or the 16-mm. size, three for 6s. 9d. Humidor Cans for these reels are sold at three for



3s. 6d., either size. "Vauxhall" Glass-Beaded Screens, size 30×40, cost 32s. 6d., or plain silver surfaces, 15s. 6d. There is also the "Vauxhall" De Luxe Roll Film Camera, taking 16 pictures on 3¼×2¼ film, with f/2.9 lens, for £4 19s. 6d.

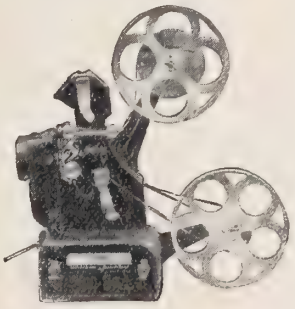
C. Baker.

The "C.B." Projection Lantern is an attractive and well-made article, suitable as a gift to any lantern-slide maker. It is built on rails, thus ensuring that the different components are always in line. The lamphouse is built with two walls, the cowl allowing all heat to escape without light leakage, and the outer wall is always cool. The price without lamp is £10 10s.



Carl Zeiss (London), Ltd.

Here is an opportunity to make an entirely novel gift. Recent research has enabled photographs to be taken of such subjects as shop windows, pictures in frames and the like, without those disturbing reflections that too often render the result quite useless, and always mar it. This absence of reflection is achieved by means of a Polarising Filter,* which fits over the lens mount in exactly the same way as a colour filter. Some really remarkable results have been achieved, and readers should send for the Zeiss "Herotar" leaflet and see the examples for themselves. For a lens mount up to 28.5 mm. the cost of a "Herotar" Polarising Filter is 55/-. Larger sizes cost slightly more.

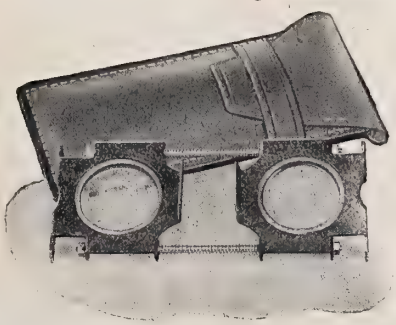


Cinex, Ltd.

All of the Paillard-Bolex Projectors deserve a complete description, but space will not allow of this, so potential purchasers should write for full details of the attractive models available. Possibly the machine most coveted would be Model G3*, which takes 8-mm., 9.5-mm. and 16-mm. films at will. This is entirely gear-driven, is interchangeable for 250 and 500 watt lamps, has "still" picture and automatic reverse mechanism, stainless steel gate, and costs £60.

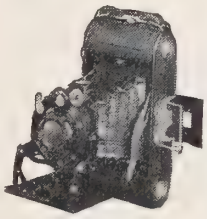
Coronet Camera Co.

To those seeking an inexpensive 9.5-mm. projector, the "Coronet Model II"* will be a suitable choice. It takes any length of film from 30 ft. to 400 ft. without extra attachments. It has fan cooling, high-gear rewind and anastigmat projection lens. The cost is £5 5s. for hand drive or £7 10s. with motor drive. The 9.5-mm. Ciné Camera with motor drive costs 75s. Other lines are the "Coronet Titler" at 21s., "Coronet f/6.3 3¼×2¼ Camera," with 3-speed shutter at 48s., or the f/7.7 model at 35s. The "Coronet Midget" Camera, claimed to be the world's smallest, costs 5s. 6d.



"The A.P." Diary.

Published for the first time this year, *The Amateur Photographer* Diary and Handbook for 1937 is a practical little book that every reader of "The A.P." should possess. It contains 128 pages, which include, in addition to the Diary itself, forty-six pages of closely printed Facts and Formulæ of real value to all amateurs for constant reference. There is also an exposure guide and tables, and considerable space is devoted to "Exposure Records." Of handy size, leather bound, complete with pencil, it is an ideal little gift for any photographer. The price is 1s. 6d., and it is obtainable from booksellers, newsagents and dealers, or from Messrs. Iliffe & Sons, publishers of "The A.P."

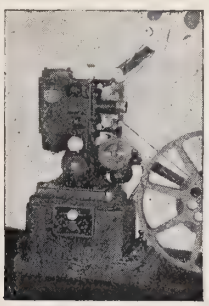


J. H. Dallmeyer, Ltd.

There are so many desirable gifts in this firm's stock that the simplest manner would be to send for their general catalogue. Telephoto lenses for Leica cameras rank highly. As an example, the 12-in. focus f/4.5 "New Large Adon," complete with monocular view-finder, gives 6 linear magnifications and costs £25. The "Adon" Variable Focus Telephoto Lens for ordinary cameras costs £7. A welcome gift to a pictorialist would be a Dallmeyer Soft Focus Lens from £4, while a reflex user would appreciate Focussing Magnifiers at 15s.* The "Sixtus" Photo-Electric Exposure Meter at £5 5s. is a popular model, a cheaper line being the "Ombrux" at 67s. 6d.

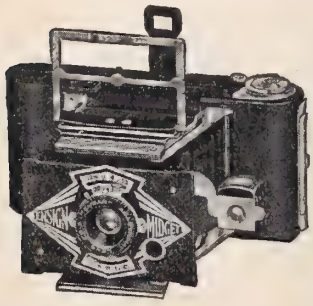
Dollond & Aitchison, Ltd.

The "Dollond Owl No. 4"* is a 3¼ × 2¼ roll-film camera that should prove most acceptable, especially to those at present owning only a camera of the simpler kind. It has all-metal body, is self-erecting, has hinged back with pressure plate, and direct-vision view-finder. With Wray f/4.5 Supar anastigmat, in 3-speed shutter, it is very good value at 55s., post free.



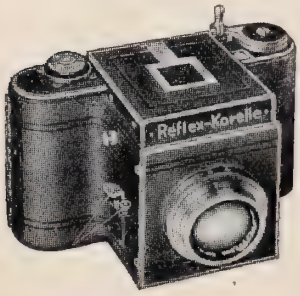
Drem Products, Ltd.

The new "Electrodrem"* Photo-Electric Exposure Meter would make a suitable gift. It will indicate daylight exposures from 1/1,000th sec. to 8 minutes. The price is £3 15s., leather case being 5s. extra. The "Largodrem" is another seasonable line. This indicates the exposure necessary for enlarging, and is connected to the same circuit as that from which the enlarger is run. The cost, including bromide paper speed tester, is 30s.



M. W. Dunscombe, Ltd.

The "Ampro" 16-mm. Projectors will all make welcome gifts. All models are provided with Venturi tube cooling, safety fire shutter and "still" picture clutch. Model J, 500-watt, costs £39 10s., and Model K, 750-watt, costs £44 10s. There are other models, with detail refinements, to £50. "Amprosound" Talkie Projectors are, for their class, inexpensive. Model K,* 500-watt, has 2-in. f/1.85 projection lens and 10-in. loud-speaker, capacity being sufficient for an audience of 500 persons, and costs £110. For larger audiences, the "Senior" model, with 750-watt capacity, at £125, is necessary.



Ensign, Ltd.

Application should certainly be made to this firm for its catalogue, entitled "Photography—Winter's Ideal Pastime," which will be sent post free. It contains numerous suggestions of great value to amateurs. Amongst the ideal Christmas gifts, first place must be given to the now famous "Ensign Midget" Cameras. These take pictures 1¼ × 1⅝, and are very compact. Model 22 costs 22s., Model 33, with 3-speed shutter, costs £1 13s., and Model 55*, with Ensar f/6.3 anastigmat in 3-speed shutter, is priced at £2 15s. Other suitable lines are Magnaprint Enlargers for Midget, Leica and similar negatives at £4 15s.; Multiflood Lighting Outfits from 6s.; Synchroflash Outfits, which, using Sashalite lamps, synchronise the firing of the lamp with the opened shutter, cost from 10s. 6d.; Flash-bulb Outfits at 5s. 6d. and 12s. 6d., and Lantern-Slide-Making Outfits at 5s. 6d.

R. A. Fleming & Co., Ltd.

A useful and increasingly popular Miniature Mirror Reflex is the Reflex-Korelle,* which takes pictures 6 × 6 cm. It has a magnifier built into the hood, which latter rises automatically when the cover is lifted. The prices range from £10 10s. with f/3.5 Victar, to £19 19s. with f/2.8 Zeiss Tessar. Model II, which gives additional speeds from 1/10th to 2 secs. and delayed action, costs £4 4s. extra.

Gevaert, Ltd.

A suitable gift to possessors of Contax or Leica cameras would be three or four cartridges of Gevaert Film. These are daylight-loading, and are supplied with caps of different colours to denote the grade. Red indicates Gevaert Special, at 3s.; Brown for Superchrom, at 3s. 3d.; Light Green for Panchromosa and Dark Green for Panchromosa Microgran each costing 3s. 6d.

Garner & Jones, Ltd.

The "Exakta Model C" is a very famous camera that would give unbounded delight. It is a mirror reflex that takes either roll films 4 × 6.5 cm. or plates 4.5 × 6 cm. at will. The price ranges from £22 10s. with Exaktar f/3.5 to £30 10s. with Zeiss Tessar f/2.8. The Model B is a roll-film reflex and costs £19 10s. upwards. An inexpensive gift that would always be welcome is a "B.S. Stabilo" Tripod.* This extends from 17 in. to 49 in. in 4-section D-shaped tubes, has ball-and-socket head with locking screw, and costs only 12s. 6d. Other models, without ball-and-socket head, cost 8s. 6d., for 4-section, and 6s. 6d. for 3-section.

Harbutt's Plasticine, Ltd.

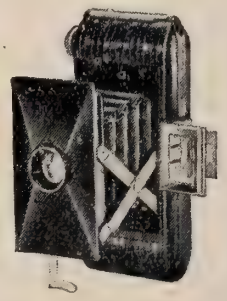
No photographer's kit is ever complete without "Plasticine," but at Christmastide it should be in every household. A gift box of "Plasticine" provides a perpetual delight to all children and will keep them quiet while their elders enjoy a post-prandial sleep. For the rest of the family, not only will it keep the holly and mistletoe in position, but it will be invaluable when taking flash-bulb photographs of festivities after dark. Outfits, obtainable from all stationers, range from 6d. to 21s.

R. F. Hunter, Ltd.

As a gift, what could be more welcome than a "Rolleiflex"* Camera? This popular line that finds new friends every day is made in two sizes, each fitted with Compur Rapid shutter. 6 × 6 cm. size costs £25 with Zeiss Tessar f/3.5 anastigmat, while the 4 × 4 cm. size, which has f/2.8 Zeiss Tessar, costs £26. The "Rolleicord II," a worthy younger brother, is made in 6 × 6 cm. size only. With f/4.5 Zeiss Triotar it costs £14 10s., or, with f/3.5, £16 10s. A useful enlarger, suitable for negatives from these cameras, is the "Exakt," at £18 10s. Other suitable gifts would be a "Tempiphot" Electric Exposure Meter at 75s., or with amplifier for indoor work, £5 12s. 6d.; "Celfix" Self-erecting Ciné Screen from £3 10s., or the "Silvette" from 27s. 6d. Pictorialists would appreciate the "Duto" Soft-focus Supplementary Lens, costing from 22s. 6d. to 30s.

Illustra Enterprises.

The "Illustra" 9.5-mm. or 16-mm. Super Projector would make a very seasonable and useful gift. It has sprocket feed, Maltese cross intermittent movement, and the lamp will project a 6-ft. picture either from a 12-volt accumulator or from the main electric supply. The accumulator model costs 99s.; the projection mains model is priced at £5 10s., or for £7 7s. the motor drive model can be secured, prices being the same for either 9.5-mm. or 16-mm. models.



Ilford Ltd.

Quite apart from a gift of a dozen spools of "Selo" Film or some packets of plates or bromide and gaslight papers—all of which are becoming increasingly popular as Christmas presents, and all of which are welcome—this world famous house has some very suitable lines to appear in Christmas stockings. The Ilford Dark-room Lamps,* with safelights that *are* safe, are sold at inexpensive prices. The Ilford Photo-Electric Exposure Meter at £3 3s., in neat leather case, is finding new adherents daily, and the "Selo" Lighting Set at 17s. 6d. would provide recipients with the means of indoor exposures at night. Users of "Dufaycolor" films would appreciate the Ilford Viewing Box at 5s. 6d.

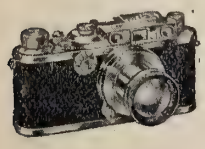
Kodak Ltd.

Kodak lines suitable as Christmas presents are legion. Probably 50 per cent of amateur photographers were started in their hobby by the gift of a "Brownie" Camera. The "Baby Brownie" costs 5s., just as it did when at this season, nearly forty years ago, the gift of one to the present writer commenced his photographic career. Then the size was 2¼ × 2¼; it is now 2½ × 1⅝. "Six-20 Brownies," 3¼ × 2¼, cost 8s. 6d. and 12s. 6d., the latter being easier to use. The "Jiffy Kodak,"* 2½ × 1⅝, fits into a vest pocket and costs 25s. For £3 10s. the "V.P. Kodak Special," with f/5.6 anastigmat in 4-speed shutter, is obtainable. To those who can afford to give more, the "Retina," taking 36 exposures 1½ × 1, with Xenar anastigmat in Compur shutter, at £10 10s., or the "Regent," 3¼ × 2¼, with coupled range-finder and Zeiss Tessar f/4.5 anastigmat in Compur Rapid shutter at £20, will appeal. Ciné enthusiasts should send for the separate

catalogue which is too extensive to attempt to detail in the space at our disposal.

Johnson & Sons, Ltd.

If some other member of the family is presenting a camera, a most fitting complementary would be Johnson's Home Photography Outfit at 8s. 6d., which contains all the apparatus and chemicals necessary to develop films and make prints. The set includes dark-room lamp, dishes, graduated measure, printing frame, thermometer and combined print album and negative wallet, together with all developing chemicals and fixing salts for film or plates and prints.

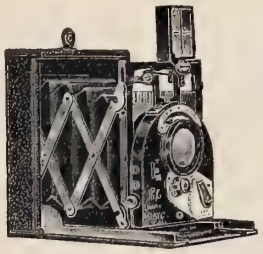


L. A. Leigh & Co.

The developing agents supplied by this firm are deservedly popular. "Fesagol N," which has the extraordinary property of compensating for errors in exposure of prints or enlargements, can be supplied in packets suitable for Christmas gifts. For 7s. sufficient developer can be purchased to last the average amateur for over a year. "Supramin,"* the fine-grain non-poisonous non-staining developer, costs 4s. for a packet to make 72 oz. A supply of each of these developers would prove very welcome to every photographer, either amateur or professional.

E. Leitz (London).

To non-Leica users, a Leica IIIa* Camera, that gives exposures from 1/1,000th to 1 second, would be a princely gift. This camera, the high watermark of its class, costs £35 with f/3.5 Elmar anastigmat, or £43 with Summar f/2. Other Leica cameras may be obtained from £16 19s. complete. To those already owning Leicas, the following accessories would make a welcome appeal: Rapid Winding Device, £3 7s. 6d.; Device for Correcting Distortion in Verticals, £2 16s. 6d.; Reflecting View-finder, £1 14s.; F/4.5 Leitz "Telyt" Telephoto Lens, £20 18s. 6d.; Leitz "Thambar" f/2.2 Soft-focus Lens, £21 19s.



Middlemass & Co., Ltd.

What can a small brother or sister with slender pocket-money give to the photographer of the family? One suggestion is a pot of "Superfix," the photographic mountant that appeared on the market a year or so ago, and has found firm adherents (in both senses!) ever since. This can be purchased, complete in aluminium container with brush, at 9d. for 3 oz. or 1s. 6d. for 6 oz. Those who are preparing their own Christmas cards or calendars will find this a delightfully smooth paste to use.

Newman & Guardia, Ltd.

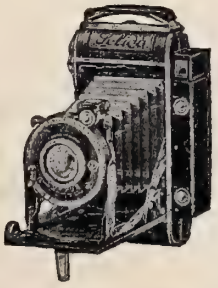
Anybody who wishes to secure lasting gratitude for a most welcome gift should present a Newman & Guardia "Baby Sibyl,"* or a "New Special Sibyl." These instruments are a sheer delight to handle, are beautifully constructed and have a high second-hand value. The price of the "Baby Sibyl" roll-film model, with T.T. & H. "Aviar" or Ross "Xpres" f/4.5 is £19 15s.; with Dallmeyer f/4.5 "Serrac," £19, or with Wray f/4.5 "Lustrar," £18. The plate or film-pack model, with 3 double dark slides, is 10s. less than the foregoing prices. The "New Special Sibyl" 3¼×2¼ camera is £23, with "Xpres" lens for either model.

Nuva Snaps.

There is still time to order Christmas cards from one's own negatives, and undoubtedly friends appreciate such a card far more than the usual commercial type, as they strike a personal note. This firm is offering a very reasonable line. Six postcard size enlargements from any smaller film, together with 6 greeting cards in colour and good quality fancy envelopes to carry them, are obtainable for 2s. 6d. post free, or 25 of each for 7s. 9d.

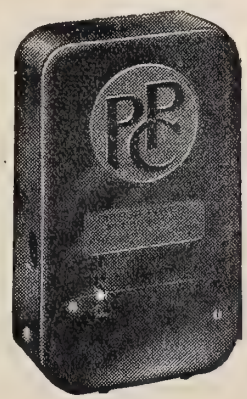
Pathéscope, Ltd.

To those desirous of converting friends to amateur ciné work, the gift of a 9.5-mm. Pathéscope Camera or Projector would be a decided incentive. The "Moto-camera H," which is a motor-driven camera with f/2.5 anastigmat, costs as little as £6 6s. The "Moto-camera de Luxe," which has multi-speed device and other refinements, costs £14 14s. An inexpensive projector is the "Ace,"* which costs only 37s. 6d. Other models from £4 12s. 6d. upwards are obtainable. If the intending recipient already owns the apparatus, such accessories as a Film Mender at 12s. 6d., or Portrait Attachments at £1 1s., would be most acceptable.



Norse Trading Co. (London), Ltd.

The "Simplex" Automatic Daylight Developing Tank* would be a sensible addition to somebody's stocking. It takes 3¼×2¼ films, and all operations can be undertaken without removal from the tank. The price is 37s. 6d. For those using vertical enlargers, a suitable gift would be the "Gnome" Masking Frame. For all sizes to 10×8, the cost is 22s. 6d., or for 12×10, 27s. 6d. A more expensive line is the "Super Baldina" Camera with coupled range-finder, for 36 exposures on ciné film. It costs £13 5s., with f/2.9 Meyer Trioplan in Compur shutter.



Peeling & Van Neck, Ltd.

A number of suitable presents can be found in this firm's catalogue. Perhaps the most attractive is the "Welta Solida" 3¼×2¼ Roll Film Camera*. This has coupled range-finder, and when closed the focus automatically returns to infinity. With f/4.5 Radionar in Pronto shutter the price is £11 10s., or with Compur shutter £12 17s. 6d. F/3.8 Xenar and f/4.5 Zeiss Tessar lenses are also available. The "Welta Perfekta" is a mirror reflex for 2¼×2¼ roll films. Prices range from £15 18s. 6d. A very inexpensive gift would be one of the "Moment" Tripods. Although only 15 in. when closed, they extend to 49 in., and cost 6s. 9d.

Presenta, Ltd.

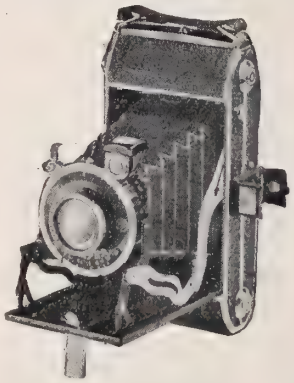
The new model "Presenta Pocket Ciné,"* which enables users to inspect 9.5-mm. ciné film in full daylight, has now a moulded rim around the periphery of the winding handle to prevent the film uncoiling and becoming tangled, and the film feed slot has been modified to obviate film scratch during rewinding. The price is 25s.

Sands Hunter & Co., Ltd.

There are several attractive lines offered by this old-established house. The "K.W." Roll Film Mirror Reflex takes standard $3\frac{1}{4} \times 2\frac{1}{4}$ film. With f/6.3 anastigmat in focussing mount, it costs £3 13s. 6d., or with f/4.5, £5 5s. A novel and useful gift would be the "K.W." Episkop,* which projects $3\frac{1}{2} \times 3\frac{1}{2}$ pictures to 26×26. The price is £5 15s., the lamp being extra. Other attractive gifts would be a "Prinsen" Photo-Electric Exposure Meter at £3 3s., or a "Praxidos" Vertical Enlarger at £4 12s. 6d.; or, a very inexpensive present, the Leudi Exposure Meter, which is so small as to fit comfortably in a vest pocket, at 5s., the leather case being 1s. extra.

Schering, Ltd.

The Voigtlander "Brilliant" Twin-lens Reflex* is a camera most suitable as a Christmas gift. It costs £2 5s. with f/7.7 lens in two-speed shutter, or in 3-speed delayed-action shutter with f/6.3 lens, £3 15s. Other models are obtainable at £5 15s. and £6 15s. For those already owning a "Brilliant" a welcome gift would be the "Brilliant Luminous Exposure Meter," at 19s. 6d. The "Superb" Twin-lens Reflex, with f/3.5 Skopar lens in delayed-action Compur shutter, costs £17 12s. 6d., or with Heliar f/3.5 lens, £19 2s. 6d. An inexpensive folding camera is the "Bessa" $3\frac{1}{4} \times 2\frac{1}{4}$, at £2 12s. 6d., with f/7.7 lens in two-speed shutter. The same camera with f/4.5 Voigtar in Compur delayed-action shutter costs £7 5s.



The Service Co., Ltd.

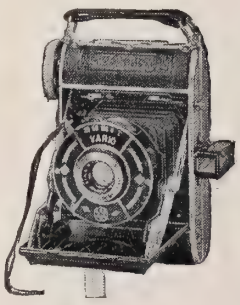
Those desirous of making gifts to ciné enthusiasts might well send for the catalogue "Home Movie World," issued post free on application to this firm, which contains a very comprehensive list of suitable apparatus and "gadgets." One gift suggestion is a subscription for 9.5-mm. Pathéscope Super Reels, which entitles the possessor to have for one night during mid-week films of comedies and plays from the extensive library. For 18 reels the cost is 21s., or for 36 reels 42s.

Sheffield Photo Co., Ltd.

Any of the "Norfolk" Cameras would prove acceptable in the Christmas stocking. The $3\frac{1}{2} \times 2\frac{1}{2}$ plate and film-pack camera has double-extension bellows, direct-vision and reflector view-finders and f/3.5 Zeranar anastigmat in delayed-action Compur shutter, the cost being £7 7s. The f/2.9 model costs £9 9s. The "New Norfolk"* is a $3\frac{1}{4} \times 2\frac{1}{4}$ roll-film model. With f/3.8 Zeranar in Prontor D.A. shutter, it costs £4 19s. 6d., or with Compur shutter, £6 6s. The "Norfolk Miniature," which takes 16 exposures on 8-exposure $3\frac{1}{4} \times 2\frac{1}{4}$ roll film, costs £6 15s. with f/2.9 Meyer Trioplan in Compur, or £7 19s. 6d. with f/2.9 Schneider Radionar in new type Compur shutter.

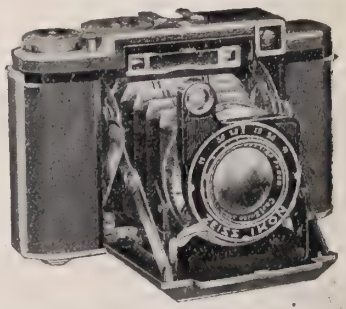
The Thornton-Pickard Manufacturing Co., Ltd.

The T.-P. "Perfecta" Vertical Semi-Automatic Enlarger* is a well-made precision instrument. The framework is of polished mahogany, and the lamphouse is designed to take 60-watt or 75-watt lamps. The bellows extension is sufficient to permit of actual size copying. For $3\frac{1}{2} \times 2\frac{1}{2}$ negatives the price without lens is £5 12s. 6d., the enlargement size being 15×10. Model 2, which enlarges $2\frac{1}{4} \times 2\frac{1}{4}$ negatives to 12×12, costs £5 7s. 6d., while Model III, for Leica, Contax and similar negatives, which enlarges to $13\frac{1}{2} \times 9$, costs £5 7s. 6d. Dallmeyer lenses for each of these models cost £3 5s. Model III can be supplied with fitting to take the customer's own Leica lens at £6 complete.



Weston Electrical Instrument Co., Ltd.

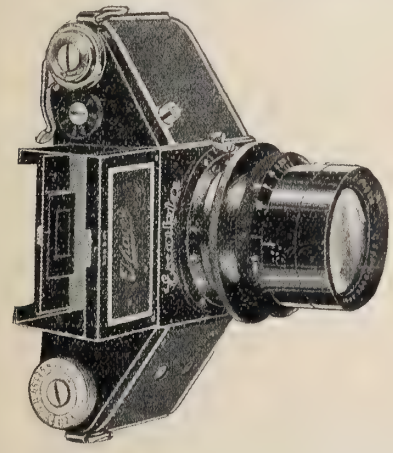
The Weston Photo-Electric Exposure Meter is a proved product, and would be received withdelight by any photographer. Model 650,* which has displaced the earlier types, is made in two forms—the "Universal," for all still and ciné cameras, and the "Leicameter," which is adapted especially for Leica cameras. The basis of the Weston meter is the patented "Photronic" cell. The price of either model, in attractive Christmas packings, is £5 19s.; leather case 10s. extra.



The Westminster Photographic Exchange, Ltd.

Either of the "Westex" Cameras would delight a photographer. The "Westex Miniature"* takes 16 exposures $1\frac{5}{8} \times 1\frac{1}{4}$ on 8-exposure V.P. roll film. With Vidanar f/4.5 in 3-speed shutter it costs £3 12s. 6d., or with Radionar f/2.9 in Prontor shutter, £5 12s. 6d. The "Westex Four-Five" takes 16 exposures on 8-exposure $3\frac{1}{4} \times 2\frac{1}{4}$ roll film. It is self-opening, has direct-vision optical and reflector view-finders, Prontor shutter, f/4.5 anastigmat, and costs £4 8s. 9d. There are many other lines suitable as gifts in this firm's general catalogue.

Zeiss Ikon Ltd.



One cannot describe the most suitable gifts from a catalogue containing hundreds of equally desirable articles at prices ranging from one shilling to £100. All that can be done is to mention one or two items and suggest that readers should send for the beautifully illustrated catalogue that will be sent post free to all mentioning *The Amateur Photographer* who apply to this famous firm. The "Contax" and the "Contaflex" are probably too expensive to expect as gifts, much as they are coveted. The "Super Ikonta 530/16"* is a camera that has found fervent admirers since its introduction. It takes 11 pictures $2\frac{1}{4} \times 2\frac{1}{4}$ on standard $3\frac{1}{4} \times 2\frac{1}{4}$ roll film. With delayed-action Compur Rapid shutter, the price with Zeiss Tessar f/3.5 is £25 5s., or with f/2.8, £28 5s. An inexpensive line, excellently finished, as with all Zeiss Ikon products, is the "Nettar" $3\frac{1}{4} \times 2\frac{1}{4}$ Camera. It is self-erecting, and costs £3 15s. with f/6.3 Nettar anastigmat in Derval shutter. There are nine other variations of shutter and optical equipment of this camera to £11.

A CHRISTMAS PRESENT TO ONESELF

The question of a new camera, the right accessories to purchase with it, and so forth, can sometimes represent a bit of a problem when one happens to be tucked away in some obscure corner of the Shetland Islands or of Little England beyond Wales, and cannot get up to London. In such cases we like to think we can be of considerable service. Although by no means the largest photographic firm in Great Britain we have, beyond all possibility of dispute, the widest selection of modern miniature cameras and accessories. The advantage to all concerned of being as we are, a small, compact and highly individual concern as opposed to the large and imposing but impersonal organisation, is that we are able to offer a service of a really personal kind to our customers which would otherwise be out of the question. Where advice or assistance of any kind is wanted regarding the choice of suitable apparatus, or, of course, on technical problems relating to miniature photography, letters should be addressed to Mr. R. G. Lewis, personally, who will then be pleased to reply to them himself.

THE "NIGHT" EXAKTA

We personally recommend the "Night" Exakta to all photographers, both amateur and professional, who are looking for a reasonably priced miniature camera capable of doing work under the most adverse lighting conditions. The "Night" Exakta will secure well exposed negatives at 1/25th, 1/50th and often 1/100th sec. in artificially-lit interiors or in the streets at night. Apart from this special work, however, the f/1.9 Primoplan lens with which it is fitted, when used at ordinary apertures, gives results from portrait, landscape and architectural subjects, etc., indistinguishable in point of quality and definition from those obtainable when using a first-class lens with f/3.5 or f/2.8 aperture.

"Night" Exakta, fitted Primoplan f/1.9, shutter speeds 1/1,000th sec. to 12 secs.....£39 10 0

We shall be glad to take any make of Modern Miniature Apparatus in part exchange for the "Night" Exakta or similar camera. Our allowances against Miniature Apparatus are, of course, the Highest in the Trade.

A SPECIAL DEVELOPER FOR WINTER PHOTOGRAPHY

For winter photography in general and for all occasions where photographs are taken under poor lighting conditions, as is usually the case in stage, theatre and candid photography, the ideal developer is paraphenylene-diamine-metol. We now prepare this developer in 1s. 9d. tins (to make 20 oz.). Each tin may be used for five Leica type spools provided that a small increase in developing time is given for each successive development. Paraphenylene-diamine-metol developer produces remarkable shadow detail, gradation and contrast, but as opposed to all other types of paraphenylene developer, requires little or no previous increase in exposure.

THE FOLLOWING LIST REPRESENTS A VERY SMALL SELECTION OF OUR GUARANTEED SECOND-HAND MINIATURE CAMERAS AND ACCESSORIES, ALL OF WHICH ARE SUBJECTED BEFORE RESALE TO THE MOST CAREFUL TESTS. OUR USED MINIATURE CAMERAS MAY BE PURCHASED WITH THE SAME DEGREE OF CONFIDENCE AS NEW ONES. THE PURCHASE OF APPARATUS FROM US IS AT ALL TIMES A GUARANTEE OF ITS MECHANICAL AND OPTICAL PERFECTION.

A Few exceptional Cameras with Extra-Wide Aperture Lenses. Specially recommended for Winter and Artificial Light Photography in general.

Contax Model III, f/1.5 Sonnar lens. As new £63 10 0
Leica Model IIIa, f/1.9 Hektor lens. As new £45 0 0
Exakta Multispeeds Model B (latest lever-wind type), fitted improved Dallmeyer f/1.9 Super-Six lens and case. Indistinguishable from new.....£26 10 0
Contax Model I, latest 1936 model, guaranteed very slightly window-soiled only, f/1.5 Sonnar lens, with carton and instructions booklet.....£42 10 0
Another, as above, but second-hand. Condition as new.....£39 10 0

CONTAXES:

Contax Model III, f/2 Sonnar lens, ever-ready case. As new £55 0 0
Contax Model I, latest type range-finder, f/2 Sonnar lens. As new.....£29 10 0
Contax Model I, slow-speeds shutter, f/2.8 Tessar, Practically as new.....£19 10 0
Contax Model I, slow-speeds shutter, f/3.5 Tessar. Practically as new.....£17 10 0

LEICAS:

Leica Model IIIa, f/2 Summar lens, ever-ready case. As new in every way.....£35 10 0
Leica Model III, chromium, f/2 Summar lens. As new £31 10 0
Leica Model III, black, f/2 Summar lens. Practically as new.....£29 17 6
Leica Model III, chromium, f/3.5 Elmar lens. As new £24 15 0

WANTED FOR CASH

XMAS GIFTS!

SHOW YOUR FRIENDS YOUR HOLIDAY SNAPS!

The "K.W." Episkop is a wonderful new picture projector, specially designed for use in the home. It is mainly intended for projecting miniature size prints without having to make lantern slides, it can be used also for projecting cigarette cards, postage stamps, postcards, small flat objects, book illustrations or colour prints of any kind.

PRICE: "K.W." Episkop, including cable with switch and plug, picture carrier and 2 masks..... £5 15 0

"K.W." Episkop Lamp, 5/- extra. (Please state voltage when ordering.)

Silver Surface Screen, 26 × 26 in., 10/-.

Everybody's Reflex Camera
The "PILOT 6"

For 12 exposures 2½ in. square on 3¼ × 2¼ (8-exposure) film. Although amazingly inexpensive, the Pilot 6 is a real reflex camera, in every sense of the word, and gives you the same working efficiency as much more costly apparatus. Shutter speeds: 1/25th, 1/50th and 1/100th sec., also B. and T. Focussing on ground-glass screen with deep hood: a magnifier for fine focussing is provided.

PRICES:

No. 13 Pilot 6, with f 6.3 anastigmat lens.... £3 13 6
No. 14 Pilot 6, with f 4.5 anastigmat lens..... £5 5 0
No. 15 Pilot 6, with f 3.5 anastigmat lens..... £7 10 0

Supplementary Portrait Lens, Light Filters, etc., supplied. Write for Prospectus and Price List.

THE 'WALLET' TRIPOD

This new de luxe quality pocket tripod folds flat when not in use and weighs only 14 oz. It is of light metal construction throughout, the outer sections being covered in ribbed celluloid. In flat leather case. Price.... £1 10 0

"ELTRON" HEATER

The "Eltron" is the most convenient and quickest method of heating a developing solution to the requisite temperature. It is safe in use and can be immersed in a glass measure or other vessel and the solution quickly brought up to the temperature required.

Price 15/-.

SETS OF "OPTOCHROM" LIGHT FILTERS

For Rolleiflex, Leica and Contax Cameras.

Set of 4 filters, 1 each Yellow, Green, Blue and Red, in velvet-lined case.

To fit Rolleiflex lens .. £2 5 0
To fit Leica lens £2 10 0
To fit Contax lens, 27-mm. diameter..£2 0 0
To fit Contax lens, 42-mm. diameter..£3 0 0

THE "RHACO" CAMERA HOLDER

A neat, portable accessory, fitted with ball-and-socket head Can be attached to a fence, gate, tree, table or any other solid support for supporting any type of pocket camera.

Price.....7/6

Soft Leather Case, extra 2/6

"CORREX" ROLL-FILM DEVELOPING TANK

For V.P. films, 25/-
For 2½ - 3¼ films, 25 -
For 2½ - 4¼ films, 30 -
Correx Thermometer.....2 6
Correx Developing Powders, per carton of 6 pairs..1/6

"RHACO" DIRECT-VISION FINDER

When using the Rhaco Finder the camera can be held at eye-level. Price 8/6.

With blue glass lens...Price 10 -
Leather Case, 2/- extra.
State make of camera when ordering.

A NEW BOOK
by a world-famous authority

PHOTOGRAPHY

by **Dr. C. E. K. MEES**
Kodak Director of Research

This book gives the reader, in small compass, a complete background to photography and at the same time provides a mine of practical information, the result of years of study and experience.

AMATEUR PHOTOGRAPHER: "a book of outstanding interest and value . . . presents a vivid panorama of photography . . . a book to buy, to study and to enjoy."

63 Plates. 7/6 net of all booksellers

PUBLISHED BY G. BELL AND SONS, LTD.

FIRST and BEST

The world-famous **"N. & G." BABY SIBYL**

was the first miniature camera

IT IS BY FAR THE BEST AND IS BRITISH MADE

[USED BY ALL THOSE WHO WANT THE SUPREME. A REAL INSTRUMENT OF PRECISION

Lens front always parallel with film. **Rising and cross front** (not obtainable on majority of miniature cameras, but a most essential feature). Optical direct-vision self-erecting and closing viewfinder. "N. & G." high-precision shutter, ½ to 1/200th sec.—the most silent and vibrationless shutter in existence.

NOTE.—In many cases compactness has been obtained by elimination of desirable movements. The Baby Sibyl has all the movements for service and practical work. Compare the size and weight against any other camera yielding same size picture.

(4.5 × 6 cm. for Plates and Film Packs, 2½ × 1½ in. for Roll Films.)

SEND FOR ILLUSTRATED CATALOGUE OF "BABY SIBYL" AND ALL OTHER MODELS OF THE FAMOUS "N. & G." CAMERAS.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

NEWS AND REVIEWS

ITEMS OF GENERAL INTEREST FROM ALL QUARTERS.

At the Camera Club, 17, John Street, W.C., the annual exhibition of members' work is now on view. The exhibits include many excellent examples of fine pictorial photography, and the show should be visited by all readers of "The A.P." who have the opportunity. Admission is free. The Crawford Plate for the best picture in the exhibition has been awarded this year to Mr. Leo A. Leigh, for his print "Guapa."

Specto Ltd., of Farnham Royal, Bucks, have asked us to correct a statement made in our review last week of the "Specto" Projector for 9.5-mm. films. They inform us that the Camera Co. are not the sole agents for this apparatus, and the "Specto" has already been supplied to the Westminster Photographic Exchange, 111, Oxford Street, London, W.1, and Branches; The City Sale and Exchange, of 90/94, Fleet Street, and Branches, and The Amateur Ciné Service, of 52, Widmore Road, Bromley, Kent.

A new and comprehensive list of all photographic books, annuals and periodicals has just been issued by the Fountain Press, 19, Cursitor Street, E.C.4. All the books, etc., are clearly priced and are in print. A copy of this useful list will be sent free to any reader of "The A.P." on application to the above address.

New lists of sound and silent 16-mm. films have just been issued by the Wallace Heaton Ciné Library. A remarkable array of popular films to suit every taste is included, and the amateur cinematographer who is preparing his Christmas programme should hasten to obtain copies or he may be too late in getting the films he wants. The hire rates are reasonable and the subscription to the library, with books of coupons, are worth immediate attention. Full particulars and copies of the lists will be sent free on application to Wallace Heaton, Ltd., Film Library, 127, New Bond Street, W.1.

We have been informed that there has been a new Secretary appointed to the Ayr Amateur Photographic Society. In future all communications should be made to the Hon. Secretary, Mr. R. G. MacGregor, Glenclop, 24, Bereland Road, Prestwick.

The Long Eaton and District Co-operative Camera Club has recently been inaugurated and meets every fortnight. The Hon. Secretary and Treasurer is Mr. E. Bowyer, 37, Charlton Avenue, Long Eaton, who will be pleased to hear from all keen amateur photographers in the district who are not members of a photographic society.

A branch of the Windlesham Camera Club has now been formed at Woking, and regular meetings have been arranged for the season which commenced on December 2nd, at the premises of Sidney Francis. Any readers who are interested will be welcomed at the meetings, which are to be held the first Wednesday in every month, and applications for membership, etc., should be made to Mr. J. C. Hayward, Hon. Secretary, Windlesham Camera Club, Hallgrove, Bagshot, Surrey.

The Shropshire Postal Camera Club (Annual Subscription 2s. 6d.) has vacancies for a few keen pictorial workers, not necessarily connected with the county. Any readers wishing to join the club should apply to Mr. R. G. V. Dymock, 23, Sion Hill, Bath, Somerset, sending two or more unmounted prints (which will, of course, be returned) for inspection.

A revised edition of "Enlarging for All" (British Periodicals Ltd., 1s.) has just appeared. This little book covers the theory and practice of enlarging with all the detail that the amateur is likely to need. Half the book is devoted to a description of enlargers of various types, both vertical and horizontal, making clear the particular advantages of each. The remainder deals with the practical handling of the enlarger in use, and with the choice of a printing paper. Details concerned with the actual treatment of the bromide paper are omitted; these are fully dealt with in another booklet in the same series.

Members of the Old Citizens' Association who are photographers will be interested to learn that a Ciné and Camera Club for membership of which they are eligible is being formed. The organiser is Mr. K. H. C. Reeves, of Roselea, St. Augustine's Avenue, Thorpe Bay, Essex.

The Brighton and Hove Camera Club are organising an International Exhibition of Pictorial Photography in the Public Art Galleries, Church Street, Brighton, which will open on April 14th, and remain open until May 1st, 1937. There are two classes: (a) Portraits or Figure Studies, and (b) any other subject. The last day for receiving prints is March 15th, 1937. We have a limited number of entry forms available at this office, but further information and full particulars may be obtained from the Hon. Exhibition Secretary, 71, East Street, Brighton.

A photographic society is being started in the Heston and Isleworth district. Anyone interested in the venture who would like to become a member should communicate with the Hon. Secretary, Mr. A. E. Black, 16, Summerhouse Avenue, Heston, Hounslow, Middlesex.

The latest winner of the Wallace Heaton Open Competition was Mrs. M. E. Walker, of 15, Durham Villas, Kensington, W.8, to whom an award of 21s. has been made. Readers will find full particulars regarding this competition in our advertisement pages.

FACTS and FORMULÆ

ONE or more items of practical value to the amateur photographer are given under this heading in every issue. They are printed in either the vertical or horizontal form as shown here, and each is complete in itself.

These facts and formulæ are intended to be cut out and pasted on the thin cards of the standard size, 5×3, supplied for card index cabinets.

The collection, when completed, will form a concise guide to photographic practice that every regular worker will value for reference, and for that reason no copies should be missed.

"A.P." filing cabinets have been specially prepared for this card index and are now ready. The size of the box is 5½×3½×3 and each is supplied complete with a set of alphabetical index cards and 150 cards for pasting on the "Facts and Formulæ." They are obtainable from our publishers, Messrs. Iliffe & Sons Ltd., Dorset House, Stamford Street, London, S.E.1. Price 2s. 6d. post free.

53. COLOURING PRINTS

WHILE there is a certain prejudice against hand-coloured photographs, various colouring methods can be effectively used and are quite legitimate in the case of Christmas and Greeting cards.

Water-colours are most difficult to apply satisfactorily unless sprayed on with an air-brush, but with considerable practice prints may be treated with water-colours, provided the surfaces are properly prepared. Transparent colours only should be used.

A light print is desirable, and for portraiture a brown or sepia toned original is preferable. Glossy prints are more difficult to colour with water-colour than matt surfaces. The gelatine in either case should first be hardened by the application of an alum bath or diluted formalin and well washed and dried

The surface should then be rubbed over with:—

Purified oxgall	30 grs.
Methylated spirit	2 oz.
Water	8 oz.

A medium composed of pure gum arabic, dissolved in water, to which a few drops of glycerine have been added, will be found better than plain water for use with water-colours. Fairly large sable brushes should be used, and the colour applied in washes that should not be disturbed until thoroughly dry.

Special colours, dyes and stains are supplied by various photographic firms, with full instructions for use. These are used in the same manner as water-colours and are applied in thin washes.

Transparent oil colours, thinned with turpentine and megilp, offer the simplest method of colouring photographic prints. Ordinary artists' oil colours, obtainable in tubes, should be used. A little of the colour and megilp medium is applied to the surface with a wad of cotton-wool or rag and gently smeared over the required places: the unwanted colour is then wiped off. Smaller spots of colour can be applied with a brush, but in any case the colour should be kept on the thin side, and the print itself allowed to show through the colouring.

Another method for tinting matt surface prints is to use pastels, which can be applied either with stumps or wads of wool and subsequently fixed by steaming the print, or can be applied with the aid of a medium made by melting ¼ oz. of beeswax in a small jar standing in a saucepan of boiling water. Then add 12 grains of potassium carbonate dissolved in 1 dram of water. Remove from the fire and add 1 oz. of turpentine. Stir and pour into wide-mouthed bottles to cool. Use the soft pastels and work up a little of the desired colour with some of the medium, so that it can be applied as a transparent tint with the stump.

SHADOWS on

A Competition in finding subjects should enliven the Christmas Party.

Fig. 1. Shadows from objects on the table top. Lit from a high point at the back, f/5.6, 15 secs.

SHADOW effects are by no means confined to the proud possessor of a focussing spotlight, and although that apparatus opens up endless scope in the production of effective shadows, the accompanying illustrations were all taken with a 75-watt clear electric lamp suspended in an old cardboard box, which is shown in Fig. 3. The lid has been removed to show the bulb, opposite which is a hole in the side of the box in a line with the lamp filament.

The smaller the hole, the sharper the shadows, but the less the light, and, conversely, the larger the hole, the softer the shadows. Also the nearer the lamp is to the hole, the wider the beam of light, the most concentrated and sharpest beam being produced by arranging the lamp as far as possible from the smallest hole, but, in doing this, the available light is at a minimum.

In the accompanying illustrations, the lamp was about one-quarter of an inch behind a hole of the same diameter, and it gave sufficient light to take an object at two yards with an exposure of about fifteen seconds at f/8. This distance is obviously that of the lamp from the subject, the distance between camera and subject having no bearing on the exposure.

The shadows are best photographed on a white surface such as drawing-paper. This must not be glazed, nor should the picture be arranged on a polished surface, as reflection might be sufficient to fog the negative, particularly if the subject is lit from behind to produce forward shadows.

In some cases, especially with forward shadows, it is helpful to illuminate the subject either from one side or the front for a portion of the exposure in order to show detail in the object, but this must be done with care or the boldness of the shadow will be reduced.

Fig. 2. Very long shadows with the lamp-box about 10 ft. away, f/16, 2 mins.

Where a small hole is used in the box, it will be found that the device can be placed almost opposite the camera lens if a dark shield just cuts off the direct rays from the camera lens, without encroaching on the picture.

Particularly striking effects can be produced

Quite apart from definite shadow effects, it is sometimes useful to employ a narrow shadow behind an object in order to produce the illusion of a stereoscopic result. Such methods offer a bold shape which can help to knit a subject together, or cut an object clearly from a background in a simple treatment which is often more effective than a carefully-thought-out but complicated lighting arrangement. Under these conditions the general lighting must be arranged not to conflict with the shadow, and a light background can be shaded locally to put interest into the surroundings.

Shadows are an ideal subject for the winter evenings, and lend themselves to personal treatment. Results of all kinds, from bold conventional methods to bizarre and fantastic creations, can be produced at will. Subjects can be arranged to provide pleasing patterns, good compositions, or pure art, and they lend themselves to puzzle pictures and humorous adaptations.

The background in every case should be matt white or as light as possible. It may take the form of a sheet of drawing-paper on the table top, upon which the subject matter can be placed, or the object to be photographed can be placed on the table top and have a vertical white background arranged behind it. Paper may be used, but stiff card is easier to handle.

Fig. 3. The Lamp-Box.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

the TABLE TOP

By
E. F. SHIPPAM.

from glass objects such as wine-glasses and vases, on account of the refracting property of the medium which can be utilised to produce drawing in otherwise solid shadows.

Almost any plates or films can be used, but it must be remembered that whilst very rapid sensitive material will allow the shortest exposures, the most contrasty effects are obtained on very slow films such as "process." With care in the lighting arrangements, providing the room is quite dark, it is possible to produce sufficient contrast even with the fastest material, and much of the

Fig. 5. Heavy shadow on vertical background, using front lighting, f/8, 15 secs.

pleasure is withdrawn if it becomes necessary to find another occupation during interminable periods of lengthy exposure.

Bearing in mind that shadow pictures are usually most effective in a very contrasty form, it is sometimes advisable to slightly under-expose and greatly increase the developing time, even employing a contrasty grade of bromide paper when it comes to printing. It is fatal to half-do the result; it must either be taken with the definite object of retaining a full range of half-tones, under normal processing conditions, or be effectively produced for bold and contrasty effects, which are so definite in their character that there can be no suggestion that tones are lacking in the photograph.

Shadows can also be utilised as a background effect to other objects, suggesting a component part of the picture, outside the range of the lens. One might have the shadow of a wine-bottle behind a tray of glasses, or the

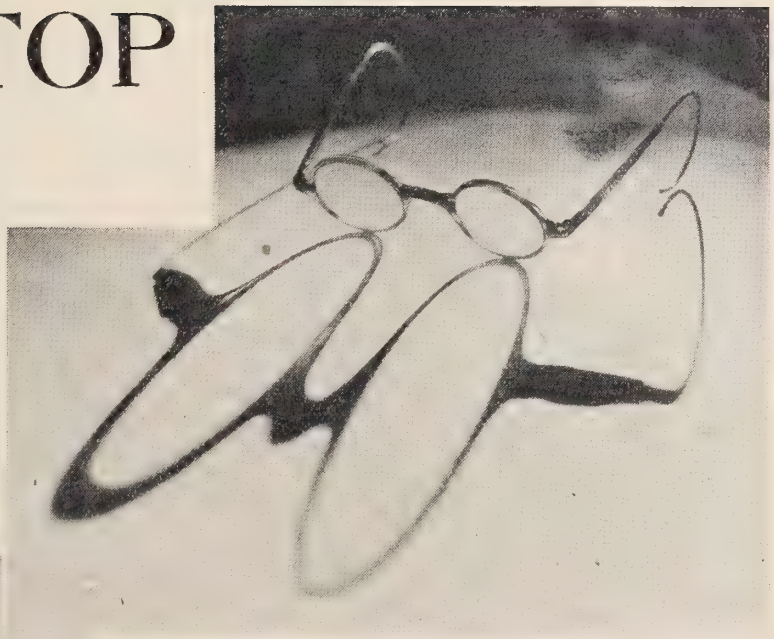

Fig. 4. Back lighting for forward shadows, f/8, 30 secs.

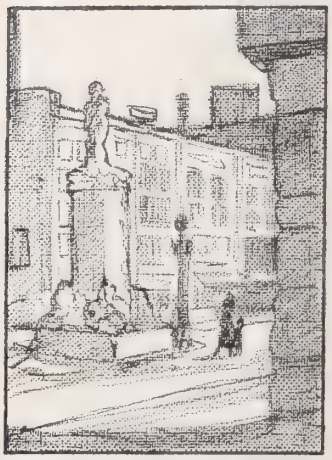
shadow of a pipe falling across the leaves of an open book.



Many variations on such themes as these can be thought out, and it is well to remember that many an object, not sufficiently "real-looking" to make a good photograph direct, can be made, with cunning, to cast a most convincing shadow.

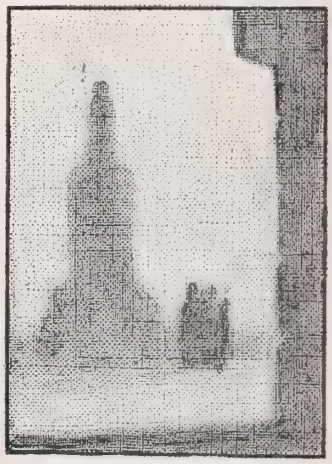


Fig. 6. Forward shadows from glasses, showing lines due to refraction, f/8, 20 secs.

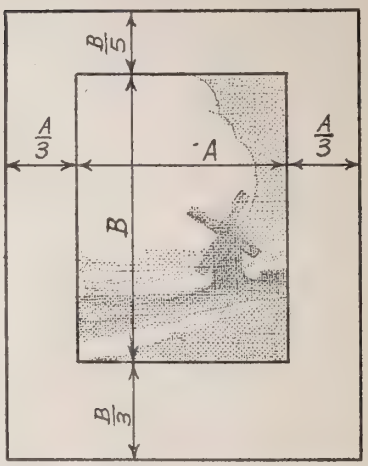
Picture Points

No. 29 (New Series) *by RICARDO*

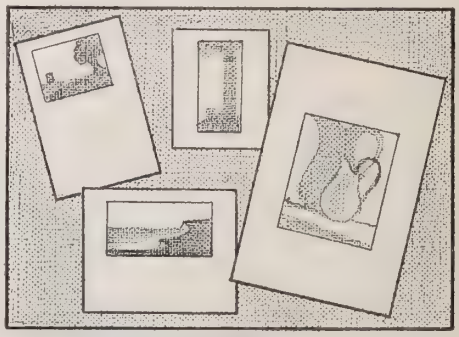


Mist—the Pictorialist's Friend.

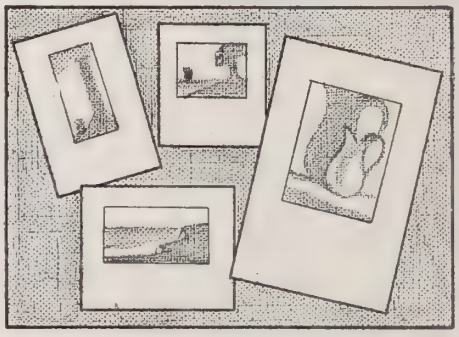
IF photographers, especially novices, would only regard the misty days and evenings in the same way that they do the brilliant sunny days, and use their cameras just as often, they would learn much more about the effect of massing in composition.

Far too much attention is paid to sharp definition all over the negative and print, and not enough to the shapes or masses of the various planes.

Study any print or picture in monochrome with the eyes half closed, so as to exclude all detail, and note the effect of the masses. If they look pleasing and well balanced then it is almost a certainty that the picture is good—with all its details. But the tendency with prints full of sharp detail is to be attracted only by the sharpness of definition.



An example is shown in the top sketch. A typical street scene, with foreground, middle distance and distance, it is spoilt by the inclusion of far too much fussy detail. The same scene on a misty day would be happily devoid of all these unnecessary trifles.



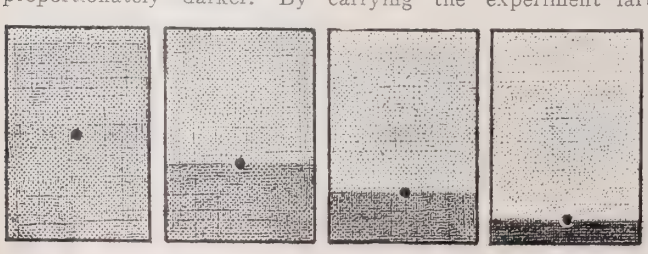
Placing the Print.

WHILE there are no hard and fast rules concerning the exact position of the print on the mount, we can, at any rate, apply a rule of thumb that will give an approximate position that will please most. The print should always leave equal margins on the right and left, but it is a mistake to make the lower margin the same as the top.

If the print is to be placed on a standard - sized mount the lower margin should be anything from 1½ to 2 times the top margin.

Where the size of the mount or the print is immaterial, then the diagram in the top sketch will provide a rough guide.

The lowest sketch shows how the bad placing of the prints in the sketch above it can be improved.



Vertical Tone Balance.

AS we have seen before in this series, the question of tone balance can only be decided by assessing the aggregate "weight" of the various tones in the print and balancing them mentally relative to the main point of interest, and that there cannot be any hard and fast rules to apply.

Once we can obtain an average of the four rectangular areas decided by a horizontal and vertical intersecting in the vicinity of the main point of interest, then the whole matter is simplified considerably.

As a preliminary exercise in balancing let us take only two areas as shown in varying degrees of tone in the left-hand diagram. The first section shows an all-over tone of grey with the point of balance in the mechanical centre.

In order to make it more interesting let us lower the point. At the same time we must balance the respective tones, the lower being a little darker and the larger area being proportionately darker. By carrying the experiment farther, we can see how it is possible to place the point quite near to the edge and still obtain a pleasing tone-balance. The right-hand sketch is typical of a picture analysed by No. 3 section.

The experiment would apply equally well if the point were higher instead of lower in the picture space. It is a useful plan to study the possible variations by making broad and simple sketches.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

Amateur Cinematography

NEWS, NOTES AND MATTERS OF INTEREST FOR ALL CINEMATOGRAPHERS USING AMATEUR CINÉ APPARATUS.

The Cinematographer Looks at Christmas Presents

By E. APPLEBY.

THE "still" photographer used to occupy a much more enviable position with regard to the Christmas present problem than the amateur cinematographer and his interested friends, but now the latter has equal opportunities of selecting suitable gifts for himself or his cinematographic friends.

Starting from the realms of very high prices, is it permissible to mention such a de luxe present as a talkie outfit? A hundred pounds is a deal of money to give for a Christmas present but, nevertheless, there are a few people who can stretch their pockets to this extent, and a selection of talkie outfits have now come on to the market, taking 16-mm. sound films.

Should the prospective amateur already possess a talkie outfit, library films could be hired for his Christmas showing. Some of the better known screen shows can be obtained from the film libraries in the sub-standard size.

But the number of talkie outfits purchased for presents will be very small, and the lower-priced ordinary projectors will attract far more attention. There are models in all categories and at extremely various prices, any of which would delight the recipient.

We might purchase a projector at seventy-five pounds, or we can go as low as five guineas for quite a number of the more modest makes. Of course, there is a considerable difference in the instruments, and also in their performance, but the man who has never had a projector before will appreciate quite a modest instrument, and will not grumble if his picture is only about twenty-four inches square. Later on, no doubt, he will crave for more elaborate apparatus, but for the present such an instrument can be quite confidently presented to him.

Perhaps the best field for the present-hunter is the realm of accessories. These have been produced in great variety with the growth of amateur cinematography, and very few amateur workers would refuse little oddments which, in the ordinary course of things, they would like but do not feel inclined to purchase themselves.

The primitive screen with which we were once content is no longer considered at all and the number of manufacturers producing different types of screen is increasing rapidly. Prices for small screens are as low as five shillings and sixpence, while, for the more ambitious, three or four guineas can easily be expended on the more aristocratic screens.

The home amateur, especially if he is a lone worker, very often does his splicing with the aid of a razor-blade and a wooden block with small nails for the perforations. It is amazing what a difference the present of a correctly-made splicer will make to this work. Prices for these range from thirty shillings upwards, and very nicely finished articles can be obtained in this direction.

Title-making, always the bugbear of the amateur worker whose ability to do good lettering is not at all marked, can be greatly simplified by the gift of a titling outfit or bench. Various models of these useful gadgets are now to be obtained. Prices range from about three guineas, with plenty of letters to cover the needs of most ordinary workers. More elaborate outfits can also be obtained which arrange for animated backgrounds, etc., and will give great scope to the amateur whose mind runs on artistic titles.

Although the time of year is not the best in which to use the more modest type of ciné camera, there is no reason why this should not be included in the list of presents, since many happy hours may be spent later on with the instrument, and the recipient can be getting familiar with the mechanism and general handling of the instrument before he runs his first film through.

Serviceable instruments can be obtained from seventy-five shillings upwards, and one can hardly recommend one instrument in preference to another, provided they are produced by a good maker. Here, then, the donor can make his own choice, inspecting the various refinements fitted to the various priced instruments at the dealer's. The latter will only be too pleased to point out the advantages of this or that gadget, and no fear need be felt in leaving the matter in his hands.

IF we get a real old-fashioned Christmas. Snowballing is not an occupation for which frequent opportunities occur. But it can provide the ciné camera with a splendid action-subject for a series dealing with "Games and Pastimes."

Fun with Magnetic Titles

By DAVID CHARLES.

YES, it is great fun, but very useful fun, too! Imagine for a moment a title which has the appearance of rapidly changing in character over the very wide range of appearances suggested by the accompanying illustrations. That is the closest approach which can be given in cold print to the effect which is seen on the screen.

These effects are not difficult to realise with the aid of the magnetic "Wondersign" Title Outfit, which many readers doubtless already possess. I propose to describe exactly how the effects shown in this set of "stills" were produced, leaving the reader to work out his own variations. Besides the magnetic letters, the only additional requirements are a piece of white cardboard or stiff paper, some iron filings, and a piece of muslin. The two last-mentioned are perhaps unfamiliar items in the sub-standard ciné laboratory, but the filings, at any rate, can be got wherever they sell materials for schoolboy science, or from any big drug store.

The "introduction" of the title may well commence by the letters "fading in." The letters are white, and arranged on white card. Since at this stage the magnetic property of the letters is not used, it is necessary to use the vertical method of supporting the camera and title-board, with the former pointing downwards at the board. It is better, too, not to rely on the normal lighting of the title-board, but to employ a photoflood on an independent stand. One starts with the lamp, in its reflector, well over the board. The white letters then scarcely show against their equally white background. Fig. 1 shows the resultant effect as it will appear on the screen.

On taking the lamp farther from the board, not only does its whole appearance become greyer, but the letters throw shadows of themselves on to the background. On removing the reflector, and lowering the lamp until it is more on a level with the title-board, these shadows become longer and sharper. The lower and the farther away the lamp goes, the more vivid is the blackness of the shadows. Fig. 2 shows one of the intermediate effects.

Now Fig. 3 is nothing more nor less than the *negative* of Fig. 2. That is to say that this effect is obtained simply by inserting a few frames of the negative following a portion of the positive. The effect of gradual or of sudden change from one effect to the other, or of the growth of the shadows in either, can be varied "to taste" according to the character of the title.

Magnetic Effects.

Next, the iron filings are brought into play. The cardboard, with the letters upon it, are temporarily removed and are laid on a sheet of newspaper spread upon the floor. Need I say that the practical titlist will have already arranged some means of restoring it to correct register on the board? The filings are put into the piece of muslin, the corners of which are then gathered together to form a bag. Holding this bag of filings about three or four feet above the floor, one taps the hand holding it with the free hand. A shower of fine grey powder descends and covers letters and board. It may require a few moments' practice, preferably in advance of the first actual title, to get this nice and even, but it is not difficult if the tapping is done gently and repeatedly, and if there is no attempt to hurry the job.

The magnetic letters begin to attract the filings, and with soft lighting they are still visible in the pervading gloom, as in Fig. 4. On tapping the cardboard very gently, more and more filings spring to attention and form "magnetic fields" around the letters, as in Fig. 6. If the cinematographer cares to suggest that the effect is wintry, I think he will not be contradicted. Even on these various effects ringing the changes in lightings and between negative and positive will afford him plenty of opportunities for giving an unusual form of life to many titles.

But the most vivid effect of action is obtained from introducing effect No. 5, of the vitality of which no indication can be obtained from the illustration. It must be tried to be believed! Lay a few of the magnetic letters on their backs (again on anything but their normal metal base). Cover them with a sheet of opaque white paper or thin card. Dust filings over this as before to produce an even grey tint. Now hold a corner of the cover and begin moving it in one direction or another. With a little imagination, assisted if necessary by soft-focus on the lens, one can introduce the suggestion of war in Spain, storms at sea, or wind over the heath. There are moments when the effects obtained almost resemble Oriental design. At any rate, it is great fun, and many of the "scenes" are worth recording. They can be used either in the way of backgrounds for titles, or alone. Having described their production, and having suggested some applications, I invite the reader to get more fun out of them for himself.

The Week's Meetings

Societies will have their meetings announced here if the syllabus is sent to us at the beginning of the session or from time to time.

Wednesday, December 9th.

Battersea Men's Inst. C.C. "Christmas Cards by Photography."
Bayswater and Padd. P.S. "Modern Aids to Indoor Portraiture." S. Schofield.
Bethnal Green C.C. "Chemistry of Photography."
Birkenhead Y.M.C.A. Criticism of Competition.
Birmingham P.S. (Ciné Sec.). "Talk on Agfa Films."
Borough Poly. P.S. "Thoughts on Art." T. F. Garnish.
Brighton and Hove C.C. "Press Button B." G. H. Dannatt.
Bristol P.S. Folio Exhibition. Criticism.
Bury P.S. "The Charm of the English Village." J. G. Birkby.
Cheltenham C.C. Beginners' Meeting.
Chorley P.S. "Pilgrimages to Old Homes." J. E. Balshaw.
Coventry P.C. "Photograms of the Year 1936."
Croydon C.C. "Print Production on Kodak Papers."
Darwen P.S. Competition Slides. L. & C.P.U.
Dennistoun C.C. Visit to "Daily Record" Exhibition.
Ealing P.S. "Waiting." Print Competition.
G.E. Mechanics' Inst. P.S. Institute Prize Distribution.
Hinckley and D.P.S. "The Historic Hastings Country." H. Browning Button.
L.M.S. (London) P.S. "A Year with Nature." J. E. Roberts.
Loughborough P.S. Whist Drive.
Northallerton and D.P. and C.S. Rolleiflex Slides.
Partick C.C. G.D.U. Portfolio.
Phœnix C.C. G.D.U. and S.P.F. Slides.
Solihull P.S. "Architectural Study."
South Essex C.C. Demonstration—"Combination Printing." W. E. Ginger.
S. Suburban and Catford P.S. Competition Evening.
Worcestershire C.C. "Successful Picture-Making for Beginners." E. Cave.
York P.S. Y.P.U. Circulating Portfolio.

Thursday, December 10th.

Accrington C.C. General Meeting and Supper.
Armley and Wortley P.S. "Ice and Snow in the Alps." W. R. Grist.
Ashton-under-Lyne P.S. Criticism of Exhibition Slides.
Aston P.S. "Mosques, Minarets and Mosquitoes." D. Gregory.
Blyth and D.C.C. "The Amateur Photographer" Prize Slides.
Bolton C.C. "General Lighting in Portraiture." C. E. Willis.
Brighouse C.C. Y.P.U. "Shield" Slides.
Bury P.S. "Warm Tones and Bromide Papers by Direct Development."
Camberwell C.C. Ladies' Night.
Cardiff C.C. Portrait Competition.
Coatbridge Co-op. C.C. Bromoil—2nd Stage and Finish.
Hampshire House P.S. "Building up a Film." G. H. Sewell.
Hull P.S. "The Story of Beverley Minster." F. Atkinson.
The Isle of Wight C.C. Members' Night. Hants Slide Section.
Keighley and D.P.A. "Enlarging for Beginners." J. Nicholson.
Kinning Park Co-op. C.C. G.D.U. and S.P.F. Colour Slides.
Letchworth C.C. E.A.F. Portfolio.
Liverpool A.P.A. "Ciné Show." Rev. F. Heming Vaughan.
Newcastle and D.A.C.A. Judging of Entries in 9.5-mm. and 16-mm. Competitions.
N. Middx. P.S. "Composition for Beginners." H. B. T. Stanton.
Oldham P.S. "A Chat on Photographic Screens." S. Bridgen.
Padiham and D.P.S. "Some Rambles in Lakeland."
Preston Scientific S. Ciné Group. W. P. Brotherton.
Richmond C.C. Members' Evening.
Singer C.C. G.D.U. Portfolio.
Stourbridge Inst. P.S. Competition. Communications.
Sunderland P.A. Beginners' Enlarging Night.
Todmorden P.S. Negative Retouching.
Urmston and D.P.S. Lantern Lecture and Slide Competition.
Watford C.C. "From Hypo to Exhibition Picture."
Wimbledon C.C. "A Dip into Devon." G. Herbert.

Friday, December 11th.

Royal Photographic Society. Joint Meeting of Kinematograph and Colour Groups.
Bethnal Green C.C. Voting and Criticism of last month's Competition.
Camping Club of G. Britain and Ireland. "Dufaycolor Photography."
Colne C.C. "A Two-days' Chara Trip in the Lake District." F. Sellars.
Dartmouth Lit. and Debating Soc. South London P.S. Portfolio.
Harrogate P.S. "The Road of the Romans." Riley Fortune.
Ilkeston Arts Club. "The Amateur Photographer" Prize Slides.
King's Heath and D.P.S. "Switzerland—In a Hurry." F. W. Pilditch.
Leigh Lit. S. "Holiday with a Camera in Holland." H. Riley.
Phœnix C.C. Annual Competition, Judging and Criticism.
Southend-on-Sea and D.P.S. "A Thousand Miles up the Amazon."
St. Helens C.C. Demonstration for Beginners. J. Gorse.
Walkden and District P.S. Allotted to J. W. Watkinson.
Wimbledon Ciné C. I.A.C. Fellowship Evening.

Saturday, December 12th.

Royal Photographic Society. Criticism of Competition Films. B. Wright.
Ayr Amateur P.S. "Daily Record" Exhibition Closes.
Howard De Walden P.C. Informal Discussion.
Wimbledon Ciné C. Dance at the Baths Hall.

Monday, December 14th.

Asbington and Hirst P.C. "The Complete Slide-Maker." Rev. H. O. Fenton.
Bexley Heath P.S. Lecturettes by Members of Woolwich P.S.
Blackburn and D.P.S. "Switzerland and Other Films." E. S. Maynard.
Blackpool and Fylde P.S. L. & C.P.U. "Flashlight Photography." J. A. Speed.
Bolton C.C. Council Meeting.
Bradford P.S. Print Night.
Camera Club. "Publishing." R. Hale.
City of London and Cripplegate P.S. Informal Meeting.
Darlington C.C. "How to Treat a Difficult Negative."
Derby P.S. Demonstration with Gevaluxe Paper. R. L. Beck.
Dewsbury P.S. Members' Lantern Evening.
Glasgow and W. of Scotland P.A. "Pictorial Composition." J. Roberts.
Ipswich and D.P.S. Social arranged by the Lady Members.
Kidderminster and D.P.S. "Children's Books."
Kingston C.C. "Faults in Negatives." Ilford Ltd.

Monday, December 14th (*contd.*).

Lancaster P.S. "The Amateur Photographer" Prize Slides.
Leeds C.C. "Development of Lantern Slides." H. B. Thomson.
Leek P.S. Competition Prints, 1935. Alliance.
Maidstone and D.P.S. The Latest in Colour Photography—Kodachrome.
Newcastle (Staffs) and D.C.C. Monthly Competition—Slides.
Oldham Equitable P.S. "Colour Photography." A. Easthorpe.
Oxford P.S. Lantern Lecture, "Through Enchanting Norway." F. R. Newens.
Preston C.C. Lancashire and Cheshire Prize Slides and Prints. W. Dempster.
Preston Scientific Soc. "The Laws of Hammurabi." Rev. B. H. Watts.
Southampton C.C. Annual Lantern-Slide Competition.
Southport P.S. "Lantern-Slide Making." R. C. M. Kermode.
S. London P.S. "Chloro-Bromide Papers." C. E. Falkner.
St. Helens C.C. "The Amateur Photographer" Prize Slides.
Wallasey A.P.S. Lantern-Slide and Holiday, etc., Competition.
Walsall P.S. "Pictorial Relativity." F. W. Lawton.
Walthamstow and D.P.S. "Some Folk and Fjords of Norway." K. Baker.
Wolverhampton P.S. "Successful Picture-Making for Beginners." E. A. W. Cave.

Tuesday, December 15th.

Royal Photographic Society. "The Present Position of Colour Kinematography."
Ayr A.P. Whist Drive.
Basingstoke C.C. Members' Slide Evening.
Beckenham P.S. Ciné Evening. S. T. Ternouth.
Birmingham P.S. Annual General Meeting.
Blackpool and Fylde P.S. President's Night.
Bournemouth C.C. Selection of Slides for the Hampshire Collection.
Bridge of Allan P.S. Discussion. Various Subjects.
Cambridge P.C. "The Maiden Voyage of the *Queen Mary*." W. King.
Doncaster C.C. "One-Man Show of Pictures." A. J. Ryde.
Dunfermline P.A. Members' Portfolio of Past and Present Work.
Exeter C.C. Western Counties Federation Folio and Lantern Slides.
Grimsby P.S. "Ciné *v.* Still Photography."
Guildford and D.C.C. "London River." W. E. Carrington.
Hackney P.S. "Photography of Interiors." W. H. Boon.
Halifax P.S. Christmas Social.
Hamilton P.S. S.P.F. Lantern Slides.
Hall Green P.S. Portfolio Prints and Slides.
Harpenden and D.P. and C.S. "The Manufacture of a Talking Picture."
Harrow C.C. Monthly Competition. Special Subject: "Clouds."
Howard De Walden P.C. Demonstration of Slide-Making.
Leamington and D.P.S. "Birds of the Hills and Moors." H. G. Wagstaffe.
Leeds P.S. "By Sea to the Lesser-known French and Italian Rivieras."
Leicester and Leicestershire P.S. "Wild Flowers." V. P. Jarvis.
Manchester A.P.S. Lantern Slide, Postal Club Slides.
Monkland P.S. "The Highlands." Jas. Sneddon.
Morecambe, Heysham and D.P.S. "Pictorial Photography." J. D. Johnston.
Newcastle and Tyneside P.S. Members' Print Competition Criticism.
Newport and Monmouthshire P.S. Members' Print Competition.
Norwich and D.P.S. Members' Lantern Slides Criticism. R. J. Delf and H. F. Low.
Norwood C.C. Lantern Lecture. F. J. Jones.
Nottingham and Notts P.S. Members' Night.
Palmers Green Ciné Society. Projection Evening.
Peterborough P.S. E.A.F. Lantern Slides.
Portsmouth Camera and Ciné C. "A Trip to Portsmouth." H. Eccles.
Preston Scientific S. "Glimpses of Germany and Austria." J. Rollinson.
Rotherham P.S. "Pictorial Work in Great Cities." A. H. Black.
Rugby and D.P.S. "Composition." M. O. Dell.
Sheffield P.S. "Out and About with Cycle and Camera." J. Shaw.
Small Heath P.S. Demonstration—"Enlarging." F. A. Bowen.
South Shields P.S. Cinematograph Night. A. G. Greaves.
Stafford P.S. Beginners' Night. "Developing." W. A. Lynch.
St. Bride P.S. Portraiture. Members' Demonstration.
Warrington P.S. "The Amateur Photographer" 1936 Prize Slides.
Whitehall C.C. "Tales of Travel—Chapter IX."
Willesden P.S. "Combination Printing." W. E. Ginger.
Winchester P.S. "A Cruise in the Mediterranean." J. H. Drummond.
Wood Green P.S. Club Portfolio.
Windlesham C.C. Ciné Evening. Mr. Donovan. E. H. Box.

Wednesday, December 16th.

Battersea Men's Inst. C.C. "Holiday Flashlight Work."
Bethnal Green C.C. Club Meeting. Discussion of Future Plans.
Birkenhead P.A. An Evening with Mr. J. H. Trace.
Birmingham P.S. (Ciné Sec.). Mystery Night.
Cheltenham C.C. "Bromide Enlargement." G. F. Harris.
Chorley P.S. "Infra-Red Photography." T. Cooper.
Coventry P.C. Chloro-Bromide Papers.
Croydon C.C. "Chat on Transparency Topics." D. S. Rose.
Darwen P.S. Ciné Night. "The White Hell of Pitz Palu."
Dennistoun C.C. "Press Photography." R. M'Leod.
Erdington and D.P.S. Inter-Club Visit to Hall Green Photographic Society.
G.E. Mechanics' Inst. P.S. "Thiocarbamide." J. Ainger Hall.
Hall Green P.S. Inter-Club Competition. Hall Green *v.* Erdington P.S.
Hinckley and D.P.S. Lecturettes. Messrs. Beardsmore, Haddock and Powell.
Ilford P.S. "Trees and Tree Photography." R. C. B. Gardner.
Leigh Lit. S. Whist Drive.
L.M.S. (London) P.S. The Double Trios Print Competition.
London School of Hygiene P.S. "Fesagol Developers." L. A. Leigh & Co.
Luton and District C.C. Reception of Exhibition Prints and Slides.
Northallerton and D.P. and C.S. "The Amateur Photographer" Prize Prints, 1936. R. P. Haw.
Northampton N.H.S. (Phot. Sec.). "Lantern-Slide Making." J. Dickens.
Partick C.C. Whist Drive.
Preston S.S. "Puppets." M. E. Boardman.
South Essex C.C. Members' Night.
S. Suburban and Catford P.S. "The New Kodachrome Process."
Tunbridge Wells A.P.A. Chloro-Bromide Demonstration. A. G. Batting.
Worcestershire C.C. Whist Drive.
York P.S. "With Camera and Rucksack in the Austrian Tirol." F. Watson.

Readers' Questions ANSWERED

GENERAL.—All communications for the Editor should be addressed: "The Editor, *The Amateur Photographer and Cinematographer*, Dorset House, Stamford Street, London, S.E.1," and in every case, without exception, must give the name and address of the writer.

CONTRIBUTIONS.—The Editor is glad to consider original, up-to-date manuscripts on photographic subjects. All contributions must be typewritten, or in very legible handwriting on one side of the paper only. Letters or communications arising out of matters already appearing in the paper are not paid for. The Editor disclaims legal responsibility for the safety of matter submitted to him, but he will endeavour to return rejected manuscripts, etc., when a stamped addressed envelope is enclosed. MSS. or prints that are not actually accompanied by a stamped wrapper or envelope can in no case be returned. Reproduction fees for prints are only paid by arrangement beforehand. The sending of a print, without any condition stated, will be taken as permission to reproduce it without fee.

ENQUIRIES AND CRITICISM.—Advice, Criticism and Information are freely given, but the following conditions should be read carefully before applying, as any communication which does not comply with the rules must be ignored.

(1) See "General" above. (2) Every question and every print for criticism must be sent separately through the post, and must be accompanied by a *separate* stamped addressed envelope. No exception can be made in any case to this rule, except so far as enquiries or prints from Overseas are concerned. (3) Neither enquiries nor prints for criticism must be enclosed with competition prints. (4) On the back of each print sent for criticism, in addition to the name and address of the sender, must be the title (if any), and the criticism coupon from the current issue. (5) Enquiries should be clearly written, on one side of the paper only, and should be specific and not general. Such enquiries as "How can I take interiors?" or "Can you give me some hints on outdoor portraiture?" are too general to be dealt with in this section. (6) All envelopes should be distinctly marked "Query" or "Criticism," as the case may be. (7) Prints are sent for advice or criticism on the distinct understanding that by so doing permission is given for their reproduction without fee. We endeavour to deal promptly with enquiries, but cannot undertake to answer by return of post, nor can we give precedence to any enquiry.

A selection of those replies is printed each week, but all questions are answered by post. Enquiries from abroad must contain a coupon also, but it need not be from the current number, and should be cut from the latest issue to reach the enquirer.

Subscription Rates: United Kingdom 17/4, Canada 17/4, Other Countries 19/6 per ann. post free from the publishers, Dorset House, Stamford Street, London, S.E.1. Telephone: Waterloo 3333. Telegrams: Amaphot, Sedist, London.

Enlarger Details.

I am going to make an enlarger. What is the minimum and maximum extension needed from a negative (24×30 mm. to 3¼×2¼) to the lens (2-in. focal length) for enlargements up to 8×10 in.? R. B. L. (Canada.)

To be able to make enlargements of all sizes from 3¼×2¼ to 8×10 from 36×24 mm. negatives your lens will have to be adjustable over the range 2.24 in. to 2.84 in. from the negative. We cannot tell you from what exact point on the lens these distances have to be measured, but it will probably be somewhere near the iris diaphragm. The range of movement necessary for focussing (0.6 in.) is, of course, an exact figure. The paper will have to be held at distances varying from 6¾ to 19 in. from the lens.

If your query implies that you wish also to enlarge from 3¼×2¼ in. negatives, we would point out that it is extremely unlikely that a 2-in. lens will cover so large a film; you will require a lens of focal length about 4¼ in.

Foreign Films in English Tanks.

I recently used an Agfa roll film, but when I came to develop it I found there was no sticker at the end of the exposed film to attach to the clip in the Ensign tank I use. Is this usual? And if so, how does one attach the film?

E. J. H. (Tamworth.)

We believe that the gummed paper at the end of the film was originally introduced by Messrs. Kodak in connection with their tank. Many German manufacturers, however, have made their films without reference to this type of tank, and the paper would be troublesome instead of a help in using most tanks of German origin. At any rate, the gummed paper is missing in all German films we have ourselves used.

We think, however, that you will find a scrap of surgical plaster a very effective substitute.

A Beginner's Troubles.

For years I have used a fixed-focus camera, and whenever there has been light enough for the small lens results have been excellent. Recently I acquired a camera with f/4.5 lens and Compur shutter, and now find that by the time I have guessed the distance, adjusted the focussing, chosen my shutter speed and cocked the shutter, my subject has disappeared, whereas with my old camera a picture would have been taken. Is there not such a thing as a fixed-focus lens working at f/4.5? P. M. (Sutton.)

If you care to stop the lens of your new camera down to the aperture of your old fixed-focus lens it will require as little focussing, and be as slow, as your old equipment.

You would, however, be better advised to learn how to use your new camera. We suggest that you fit a temporary focussing screen, and spend a spare hour in studying the effect of lens-aperture on focussing; this will teach you more than the written word could do about the way in which a lens behaves. Even an experienced photographer is slow in handling a new camera. We therefore advise you to indulge in a good deal of "camera drill," in which you go through all the steps of taking a photograph, but with your camera unloaded. This will eventually enable you to handle your new camera with promptness and accuracy.

Spotting Prints.

I have used lamp-black water-colour with some success for spotting the dark and intermediate tones in my prints, but cannot make it sufficiently light for spotting sky or sea. Do I get a tube of pale grey water-colour for this? Or should I mix the lamp-black with Chinese white?

P. G. C. (Surrey.)

The colour you already have is all you need, but you are evidently putting far too much paint on the brush for the lighter tones. By adding sufficient water you can control the depth of colour, even making it so light that it is practically invisible.

Photo-electric Meters.

Using a photo-electric meter which includes light from all parts of the subject to be photographed, it seems to me that no allowance will be made for any small portions of the subject which may be very dark. In that case the use of such a meter is not just automatic, and it would seem that considerable experience would be required to make the necessary allowances. Would it not be equally satisfactory, therefore, to use a simple exposure calculator? F. M. (Newcastle.)

With an exposure calculator you have to estimate both the brightness of the light (by time of day, date, state of sky, etc.) and the darkness of the subject, taking into special consideration the darkest parts of this. Using a photo-electric meter, you actually measure the combined effect of the brightness of the light and the *average* darkness of the subject, leaving you nothing more to estimate than the subject's contrast. The meter scales are set to allow for subjects of normal contrast, and in such cases the indicated exposure may be given without further consideration. In subjects of high contrast the darks are darker than in an average subject so that extra exposure is needed—and here begins the factor of personal estimation. But there is so little left to estimate that if you once recognise that modification of the readings are sometimes necessary, and take care that the extra exposure, when needed, is generously estimated, you will obtain perfectly satisfactory negatives with no experience at all.

Enlarging from Ciné Films.

Can you tell me if it is possible to "shoot" a film of, say, children at play with a 9.5-mm. ciné camera, and to make a perfectly sharp enlargement of one frame which shows the best expression of the children's faces? W. M. (Leicester.)

Although a film may look perfectly sharp and clear when projected you cannot expect to get a really good enlargement from any single frame. Provided you bear in mind that the picture on a 9.5-mm. film is very much smaller than that on a standard-size film, you can get some idea of the possibilities by studying the subjects shown outside cinemas, where the coarse and grainy ones are made from single frames, but the good, sharp ones are taken singly with special cameras.

In addition to the question of grain, you must remember that in a film of children at play each individual frame is likely to be unsharp through movement of the subject. This, unnoticed on the screen, would show up terribly in an enlargement.

Selling Prints.

Could you give me a rough idea of the price I should ask for photographs which I might sell to a firm who make calendars? My negatives are 4.5×6 cm. in size, but will enlarge easily to whole-plate or more. Should I send contact prints or enlargements? W. H. G. P. (Liverpool.)

The selling of photographs for calendar purposes and so on is always a matter of negotiation. There are no such things as fixed prices. Your best plan will be to ask for offers, and decide whether or not they are worth accepting. In submitting prints it is far better to send whole-plate copies than smaller ones, but we do not think anything would be gained by exceeding this size.

THE PICTURE HUNTER

Dr. Julian Smith (Australia)

84 Charming Pictures

PHOTOGRAMS OF THE YEAR 1937

The Annual Review of the World's Pictorial Photographic Work

Edited by F. J. MORTIMER, Hon. F.R.P.S., Editor of "The Amateur Photographer and Cinematographer"

"PHOTOGRAMS OF THE YEAR," now making the 42nd annual appearance, maintains the high standard of artistic achievement which has characterised it from the first number.

This year's subjects range from everyday scenes and still-life studies to landscapes, portraits and architecture. Beauty, art and technical skill are blended to produce an outstanding volume of photographic excellence.

Keen photographers everywhere will find pleasurable occupation in making a careful study of these splendid examples of the art of the camera, and of noting the latest developments in technique.

Obtainable from leading Booksellers, or direct from the Publishers

ILIFFE & SONS LTD., DORSET HOUSE, STAMFORD ST., LONDON, S.E.1

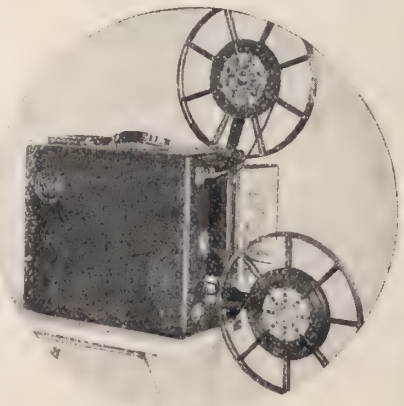
MAKES AN IDEAL CHRISTMAS GIFT

The "INVISIBLE CHAMBER"

BEWARE of the "Invisible Chamber" when you consider purchasing any "Talkie" Projector. The essential part of a sound projector is the amplifier, and this "invisible chamber" is seldom examined on buying a 16-mm. talkie, yet it is the main portion of the apparatus.

For "long life" and future satisfaction this amplifier must have large resistances, transformers and "heavy duty" wiring, or a new amplifier will be needed in a very short time.

INSIST - EXAMINE THE "INVISIBLE CHAMBER."



Ask your dealer to let you see inside any "De Vry" amplifier, examine carefully its heavy duty transformers, wiring, and strong resistances "like soldiers on parade," you will then appreciate its beautiful workmanship and why a "De Vry" will **never** let you down.

"THE CHALLENGER"

The amazing new DE VRY TALKIE that challenges the world.

The only 16-mm. Talkie in the world with:

DOUBLE EXCITERS — 35-mm. SOUND HEAD
DUAL FAN COOLING — "BALANCED WEIGHT" Cases

16-mm. De Vry Challenger Projector, sound or silent speeds, direct illumination via 2-in. diameter condensers and reflector, triple upright claws, **11 watts** genuine volume, tone control, microphone and gramophone fittings, etc., **double exciters,** slide one in position if other fails, **without stopping the show** (patent De Vry feature), 35-mm. sound head (similar to the 35-mm. De Vry theatre types, for purity), dual fan cooling, flickerless rotation shutter giving maximum light value, ball-bearing idler sprockets (only De Vry has ball-bearing idlers), dual shuttle, centre "one oiling" point, double sound filter, the De Vry Famous "matched sound system," automatic pilot, illuminated controls on onyx marble panel, new "non-scratch gate" (film held by edges only in the De Vry), 1,600-ft. capacity, large dynamic speaker, in two "balanced weight" carrying-cases, complete.

500-watt model f/1.8, etc. **£118 0 0**
750-watt model, f/1.6, etc. **£125 0 0**

PERFECT VENTILATION FOR YOUR DARK-ROOM!

All the difficulties of dark-room ventilation are overcome by the installation of a Vent-Axia Stale Air Extractor.

No longer need you work in discomfort for want of a constant supply of fresh, clean air! The Vent-Axia draws out electrically all stuffiness, fumes and odours, and keeps the atmosphere free from dust—without creating draught or noise. *It is absolutely light-proof.* It fixes easily in any convenient wall, door or panel, and costs next to nothing to run—100 hours for one unit of electricity. It is the only stale air extractor for dark-room use on the market at a convenient price.

Over-all diameter 9½". Requires only 6⅝" diameter hole cut in window, wall or partition. No bolts or screws. The double cowl guarantees absolute screening from exterior light. Casing in brown BAKELITE. ALL-BRITISH

£5 : 5 : 0

Standard Model for general domestic and office use

£4 : 14 : 6

Similarly constructed units for INTAKE instead of extraction are available, as well as special models for building into walls.

The very wide scope of a Leica

ONE big reason for the enormous following that LEICAS have obtained is their truly notable versatility. Literally, you can do the work of a battery of ordinary cameras with just one compact and handy Leica. Landscapes, seascapes, genre studies, architecture, sports scenes, groups, portraits, distant telephoto work, microphotography—all these, and a lot more, are well within its generous scope. A LEICA, in truth, represents not just one camera, but a dozen.

- Let "the WESTMINSTER" show you how a liberal allowance for your
- present camera, in EXCHANGE, and Westminster Out-of-Income facilities,
- can help you in realising your ambition and acquiring a LEICA.

Leicas cost from £16 upwards. Below is shown the Model IIIa, with f/2 Summar lens, automatic focussing, shutter speeds to 1 1,000th sec at £43, or 9 monthly payments of £5 0s. 4d.

"Surely that's a Chloro-Bromide Enlargement!" (exclaimed the visitor to his exhibitor friend)

EXHIBITOR: Yes; do you like it?
VISITOR: I always admire the pleasing warmth of tone given by chloro-bromide paper, but I find those papers so slow for enlarging.
EXHIBITOR: I'll let you into a secret. Use Criterion "Mezzotone" Paper. It's unique among chloro-bromides, having a speed approximately that of bromide paper.
VISITOR: Thanks for the tip. I like the surface; it looks like a crushed rough. What is it?
EXHIBITOR: That's "Lustra." Now another tip. Use their Cri-tona with Mezzotone Paper. By just immersing the print in this solution for a minute or two it intensifies the whole image and gives wonderful brilliance. Also, it tones to whatever warmth you require.
VISITOR: I'll make a note to get some when ordering the paper. Let's see the lantern slide exhibits.
EXHIBITOR: Most of these are on Criterion "Mezzotone" Lantern Plates, for the good reason that they too are absolutely unique, yielding warm tone by straight development, with printing speed similar to bromide. Such speed enables you to make slides by reduction.
VISITOR: That slide surely has been through the thiocarbamide process.
EXHIBITOR: Funny you should pitch on that. It so happens it's one of mine. That tone was not obtained as you think. It was given by Cri-tona. You get this delightful tone or extreme warmth of sepia, as you like.
VISITOR: It's very good of you, giving away your secrets. I'm off to my Dealer's now to get supplies. Bye-bye.

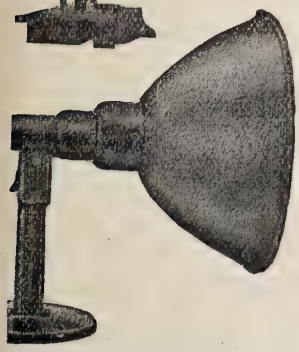
NERON NITRAPHOT

REFLECTORS

FOR INDOOR PORTRAITS



TYPE S

A new Reflector with plunger switch, for Neron Nitraphot Photoflood lamps. By using the switch on the base of the reflector, the "life" of the lamp is economised—it need not be switched on until all is ready for making the exposure. Complete with 9 ft. flex.

PRICE 10/6

Nitraphot Photoflood Lamps, 2/6 each.

Please state voltage when ordering.

TYPE K

This Reflector is for use with high intensity Neron Nitraphot lamps with screw fitting. Thumb switch in handle, adjustable support, removable cast-iron base, can be used on tripod if desired.

PRICE 12/6

200-watt Neron Nitraphot Lamp, 7s. 6d.

500-watt Lamp, 20s. 0d.

24 monthly payments of £2 7 11.
15 monthly payments of £3 14 3

Leica, Contaflex, Super Ikonta, Exakta and every miniature camera in stock. All on easy terms.

We have made that "What shall I give him" problem easier this Christmas. If he likes the talkies he'll be delighted with a Filmosound apparatus, and so will all his friends. Then for the best silent entertainment there's the Siemens projector and the new Kodascope E; or if he has a good modern projector, give him a Wallace Heaton Film Library subscription, and he'll think tenderly of you every time he takes a film out during the coming year. Then there's a simply wonderful range of stock films he can **own,** to fit in with his personal or library ones for the longer programmes. You could hardly go wrong, either, if you got him a reel or two of the amazing new Kodachrome film for indoor colour shots—and you can be "in it" when he films the party!

If he favours "stills," your choice of something he really wants will be even easier. A good modern miniature camera like the Leica IIIa, or the Contax III would endear you to him for life. He'd be delighted, too, with a Rolleiflex, or, if it won't quite run to that, a Rolleicord at the newly reduced price. Precision cameras both, and big prize-winners, too! There are books, too, on every phase of modern ciné and still photography that make excellent little gifts for both the novice and the serious worker.

Should he already be the proud possessor of a miniature camera, then you are indeed fortunate. No miniaturist owns **all** the accessories his soul craves for. Special purpose lenses and filters and numerous attachments for making his little friend even more versatile would be as gratefully received as a good exposure meter by any owner of a miniature—or a ciné camera for that matter.

Put **your own name** down on your gift list, this year. It may sound selfish—but you will get a tremendous thrill hunting through our stock for the one thing you want most. See the exhibition of modern work in our galleries. It is free—as is the expert advice of our courteous staff.

ROLLEICORD REDUCED in PRICE

JUST IN TIME FOR CHRISTMAS!

Rolleicord represents more amazing value than ever.

Automatic film wind. New type reflex hood and larger magnifier. Depth-of-focus and focussing knob combined. Engraved exposure plate. Takes all Rolleiflex accessories, excepting angle mirror. Takes 12 exposures on $3\frac{1}{4} \times 2\frac{1}{4}$ roll film for 1/-.
With Zeiss Triotar f/3.5 and Compur shutter, 1/300th, T. and B.....**NOW £16:10:0**

24 monthly payments of 14s. 10d. 15 monthly payments of 23s. 2d.

F/4.5 Model.....**£14 10 0**

ROLLEIFLEX.—The famous camera which has won the *Daily Herald* big first prize two years in succession. With f/3.5 Zeiss Tessar lens..... **£25:0:0**

Nine monthly payments of 58/4.

★ ***ANY PURCHASE CAN NOW BE BOUGHT ON FIFTEEN OR EVEN TWENTY-FOUR EQUAL MONTHLY PAYMENTS. HIGHEST ALLOWANCES ARE MADE ON YOUR USED APPARATUS IN PART EXCHANGE. SEND 2d. POSTAGE FOR LISTS.***

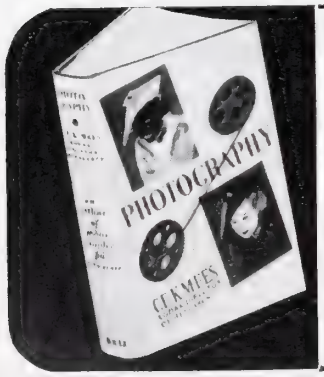
The Snapshotter's Saturday Night



You don't have to move very far from your own fireside in order to find plenty of perfectly good picture subjects. And you don't have to go further than your nearest Kodak Dealer for the Kodak "S.S. Pan." Film and Kodak Night Photography Aids that enable you to take these subjects with a minimum of bother and a maximum of success.

3 "Photoflood" Lamps in "Kodaflector" Reflectors. ½ sec. at *f* 11.

KODAK SUPER SENSITIVE PANCHROMATIC FILM

Photography

by Dr. C. E. K. Mees
Kodak Director of Research.

A Book You Ought to Read

A wonderful survey of photography in all its aspects by a master of the subject. Based on the lectures given by Dr. Mees at the Royal Institution last Christmas, this book deals with the history, science and practice of photography and cinematography in a simple, lucid way. From Kodak Dealers and Booksellers, price 7/6.

and the KODAK NIGHT PHOTOGRAPHY AIDS

"Photoflood" Lamps, 2/6 each. "Kodaflector" Reflector, 3/-. "Kodaflector" Outfit, including Reflector, Stand, 9 feet of flex, lamp-holder and plug, 7/6.

Ask your Dealer for free Kodak Night Photography Booklet, or write for copy to Mr. A. P. Talbot.

WALLACE HEATON'S NEW EASY PAYMENTS

WHAT THEY MEAN TO YOU!

An entirely new proposition in easy payments with tremendous possibilities for every amateur photographer. The most luxurious Still or Ciné outfit can be yours by systematic payments of small amounts such as you can easily pay. Anything over £5 may be bought on 15 or 24 monthly payments—and goods below £5 on 15 monthly payments. After the first payment, you have the use of the apparatus. You may have imagined a Leica IIIa, or even a Talkie outfit, right out of your reach—but a moment's thought will show that you can buy either, out of income, quite easily.

FOR INSTANCE

You can buy and use the £43 Leica IIIa for only **9/8** per week.

YOU CAN EVEN GET A COMPLETE TALKIE OUTFIT G.B. (GEBESCOPE) FOR AS LITTLE AS 21/6 PER WEEK.

You can buy and *use* a £7 10s. camera while you are paying for it at approximately **2/6** a week, and the same applies to a £15 camera for about **5/-**.

ANYTHING WE SELL CAN BE YOURS TO USE AFTER MAKING THE FIRST PAYMENT.

Whatever you choose, still or ciné—new or second-hand—is included in this amazing new easy payment plan. Only 5 per cent is added to cash price for 15 monthly payments or 7½ per cent for 24 monthly payments.

A customer writes : 5/4/36.

". . . Please accept my heartiest thanks for concluding our easy payment transaction in such a straightforward and efficient manner." J. R.

YOUR OLD CAMERA TAKEN IN PART EXCHANGE AGAINST A FRESH PURCHASE LESSENS THE COST OF YOUR NEW APPARATUS AND MAKES THE EASY PAYMENTS EASIER STILL.

The part exchange allowance acts as your first instalment, and the balance is distributed evenly over a further 23 or 14 monthly payments.

Nothing could be easier. We make no enquiries from employers, nor do we require harsh agreements to be signed, and our forms of application and agreement are of the simplest possible nature. We believe in giving the customer a square and easy deal.

We shall be very glad indeed to give you all the information necessary, make an approximate offer on your own apparatus if desired and tell you how much any outfit will cost you on easy payments.

NOW PLEASE REFER TO OUR ADVERTISEMENT ON THE INSIDE BACK COVER.

Another customer says : 27th May, 1936.

"I have now paid the final instalment on the camera, and I am satisfied in every way. Again I would like to make use of your easy payment system. Kindly send on the necessary form at your earliest."

The remaining eleven weekly subjects for this competition are :

Beautiful Women, Architecture, Winter Sports, Quick-action Pictures, "New Angle" Shots, Birds, Animals, etc., Indoor Portraits, Flowers, Figure Studies, Boats and Seascapes, Pictorial Subjects. Why not prepare your entries in advance?

COUPON which must be affixed to the back of each entry.

WALLACE HEATON LTD.
"LANDSCAPE" COMPETITION

Closing date, January 13th.

This coupon is also available for the Wallace Heaton "Open" Competition for the week December 16th to 22nd.

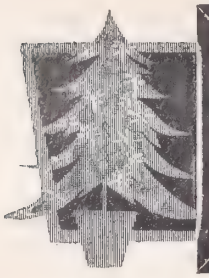
"LANDSCAPES"

IS THE SUBJECT FOR WALLACE HEATON'S

PHOTOGRAPHIC COMPETITION

FOR THE WEEK JANUARY 7th TO 13th, 1937.

TREMENDOUS SCOPE FOR EVERY AMATEUR — AND ALL MAY ENTER WITH ANY CAMERA THEY CARE TO USE!



You have four whole weeks in which to prepare your entries—so get busy now!

Each week we give one guinea for the best picture received—each week we give you a different subject. Everybody has an equal chance of winning a prize, as well as selling us his picture for two guineas. After three months all pictures received will be judged for the final first prize of £25 cash. There are no restrictions with regard to make or size of camera or materials used, and it doesn't matter where your negative was developed and printed. Either contact prints or enlargements up to 15×12 in. (mounted or unmounted) are eligible, but not less than 8×6 is recommended. No retouching or faking is permitted, except simple spotting to remove defects. We give you four clear weeks to prepare your entries. All entries for the Landscape Competition must be sent in between January 7th and 13th. The complete series ends on March 31st, 1937, when the big cash prize-winner will be chosen. An additional 21/- will be awarded to prize-winner if his enlargement was made by us. For photographs which appeal to us, not necessarily prize-winners, we reserve the right to purchase the copyright by payment of £2 2s.; in the case of weekly prize-winners, by the payment of an extra 21/-. The copyright of the £25 prize-winning print must be made over to us without further payment. Acceptance of the rules is a specific condition of entry.

21/- AWARDED FOR EACH WEEK'S BEST PICTURE **£25** FOR THE BEST SENT IN DURING WHOLE COMPETITION

The Wallace Heaton "Open" Photographic Competition is still running—Entries can be sent in up to Dec. 31st, 1936. See coupon.

16-mm. Ensign Silent Sixteen 180, all volts., complete with resistance, motor drive. List £28 5s. **£13 17 6**

16-mm. Model C Kodascope, 100 watts, complete with resistance. Perfect order. Cost £18 18s. **£7 19 6**

16-mm. Arrow 500-watt Projector, complete with transformer for all volts, A.C. only and de luxe carrying-case, 2-in. Dallmeyer Superlite lens, silent running, brilliant, flickerless projection. As new and unused **£27 10 0**

8-mm. Keystone, 200 watt, bronze model, quiet motor, flickerless projection, with resistance all volts., A.C./D.C. List £15 14s. 6d..... **£13 2 6**

16-mm. Keystone, 300-watt, complete with resistance, all volts., A.C./D.C. Perfect order and condition. List 18 guineas **£13 17 6**

8-mm. Kodascope 8-30, complete as listed at £9 9s., in box, all volts..... **£7 19 6**

9.5-mm. Paillard-Bolex Model P.A., 400-watts, forward, reverse, stills, fan-cooled, wide-aperture lens. List £25 10s..... **£19 17 6**

16-mm. 750-watt Victor, 2-in. Maxlite lens, forward, reverse, rapid auxiliary rewind, 1,500-ft. capacity, complete as listed at £63. Perfect condition **£52 17 6**

16-mm. Ensign 300-B, complete for all volts., 300-watt illuminant, self-contained outfit in case. List £79 10s. **£24 17 6**

17.5-mm. Pathescope Home Talkie, complete as listed at £60. Almost unused, fully guaranteed **£47 10 0**

9.5-mm. Pathescope Ace, complete with all voltages A.C./D.C., resistance. Listed 37s. 6d. Perfect **28s. 6d.**

16-mm. Agfa Domestino, 100 watts, all volts., in case. Listed £17 15s..... **£14 17 6**

16-mm. Agfa Super Movector, 75-volt 375-watt illuminant, ammeter controlled, 2 or 3 bladed shutter, complete with built-in transformer for A.C. mains, all volts, and subsidiary resistance for D.C. mains, all volts., in wooden carrying-case. Listed £75 **£64 17 6**

9.5-mm. and 16-mm. Bolex G916, 500-watt lamp, all voltage resistance, universal mains, complete in case. Cost £53 15s..... **£39 17 6**

CINÉ CAMERAS

9.5-mm. Dekko Camera, multi-speeds, f/1.9 interchangeable lens. As new. Listed £10 18s. 6d. **£8 7 6**

16-mm. Cine-Kodak B.B., 2 speeds, f/1.9 interchangeable anastigmat, complete with 3-in. f/4.5 Telephoto and combination carrying-case. Fully guaranteed **£24 17 6**

16-mm. Cine-Kodak K, interchangeable f/1.9 Kodak anastigmat, 100-ft. or 50-ft. capacity, 2 speeds. Listed £35. As new..... **£27 10 0**

16-mm. Ensign Autokinecam, fitted 1-in. f/1.9 lens, interchangeable mount and case..... **£12 17 6**

9.5-mm. Pathescope Motocamera H, latest model, f/2.5 anastigmat lens, very quiet running. List £6 6s. **£5 7 6**

16-mm. Bell-Howell Filmo 70, 1-in. f/1.8 Cooke anastigmat, interchangeable, 3½-in. f/3.3 Cooke Telekinic, complete with matched view-finders, in carrying-case **£24 17 6**

9.5-mm. Pathescope Motocamera B, f/3.5 anastigmat. As new. Cost £6 6s..... **£4 12 6**

16-mm. Siemens Model C, f/1.5 Meyer focussing anastigmat, complete with Leitz mounted range-finder and case. List £55 10s..... **£37 10 0**

Give a.. Rolleicord

Here's the camera gift you can choose with confidence—a firmly established popular favourite which will give perfect pictures all the year round.

Rolleicord offers facilities which you don't get from an ordinary camera. It shows the picture full size and right way up on the ground-glass screen, and simply won't allow for getting "dud" pictures. It's the easiest camera anyone could wish to operate, and it's very economical, too. It takes 12 pictures on 8-exposure $3\frac{1}{4} \times 2\frac{1}{4}$ roll film for 1/-, and is designed to take plate back, ciné film attachment, and all Rolleiflex accessories except only the angle mirror. It is fitted with Zeiss Triotar f/3.5 lens and Compur shutter speeded to 1/300th sec., T. and B. Body is of neat leather-covered finish.

NOW REDUCED TO **£16:10:0**

There is also the f/4.5 model at **£14 : 10 : 0**

Here's one of the secrets of **CONTAX** *superiority*

● THE DETACHABLE BACK OF THE CONTAX.

(1) Facilitates cleaning—very necessary, because dust will accumulate inside a camera and cause pinholes on the negative if not removed.

(2) Permits the use of plates in dark slides for scientific work and special branches of photography, when the Contax plate back forms part of a Contax equipment.

● Choice of thirteen interchangeable Zeiss lenses, f/1.5 to f/8, focal lengths 1⅛ to 20 in., unobtainable on any other camera. The quality and resolving power of Zeiss lenses are known the world over. ● Long base distance meter coupled to lens focussing—combined in one aperture with view-finder in Contax II. ● All-metal incorrodible focal-plane shutter, accurately speeded from ½ to 1/1,000th second—1/1,250th second in Contax II. ● Shutter speeds can be altered both before and after setting—the complete scale of speeds is always visible in Contax II. ● Delayed-action release in Contax II, the only miniature camera so equipped.

CONTAX

Ask your local dealer to demonstrate to you the Contax. Name of nearest dealer, together with Zeiss Ikon publication, "Unfettered Photography," describing all Zeiss Ikon miniatures, will be sent free on request.

Topics of the Week

As mentioned in a previous issue, the entire British Section of the recent London Salon of Photography was invited for exhibition in various centres in America during 1937. The collection, which consists of over 200 pictures, by 87 British pictorialists, is a very representative one and is now on its way to New York, where it will be exhibited in January, under the auspices of the British Chamber of Commerce, in the British Building in the Rockefeller Centre, New York, until the end of the month. The collection will then be displayed at Philadelphia, Chicago and San Francisco in suitable galleries. In each city the British Chamber of Commerce will sponsor the exhibition. The invitation and organisation of this exhibition of British work in America has been undertaken by the Oval Table Society, which has its headquarters in New York. This Society is devoted to the furtherance of pictorial photography in America and under its ægis the National Salon of Photography, 1936, was recently held at the Vanderbilt Gallery of the American Fine Art Society in New York. The President is Pirie Macdonald, the Secretary is Joseph M. Bing, and many of the leading pictorial workers of America are on its Council.

The Glamour of the "Still."

Mr. Anthony Asquith made a teasing speech in opening the exhibition of cinematography at Russell Square. He said that it was an open trade secret that the true vampire, the real siren of the cinema, was not Miss Marlene Dietrich, Miss Greta Garbo, or Miss Mae West, but the innocent-looking still camera-man. How often had they been passing a picture-house when a "still" had caught their eye, and they had hesitated, looked a little more closely, and been lost. It showed the most beautiful cornfield with white clouds riding high, or, if one's tastes ran in a different direction, it showed a young woman suspended by one leg and a frayed rope over a seething sea of octopuses, and "before you know where you are you have paid your one-and-three," to find, as likely as not, that neither of these scenes occurred in the film, or only in an inferior form. He had often thought of suing the still camera-man for extortion, enticement, breach of promise, and false pretences. Mr. Asquith added that seldom had the vampire appeared in more seductive form than in the exhibition of "stills" in the present show. Mr. Asquith was introduced to the audience as one of the few people sincerely interested in British film production who had resisted the gilded vortex of Hollywood.

The Hunting Season is now in full swing and many attractive pictures are to be obtained in all parts of the country.

The scattered interest typical of a hunting scene has been avoided in this picture by choosing a high viewpoint and allowing the line of the road to dominate the composition.

Why Trouble About Nature?

The question whether natural colours as seen in sunlight are the most desirable when viewed in a dark hall was raised in a recent society discussion, and one daring speaker appealed to an artistic film director to make what he called a sepia film, by which he meant a film in reds and browns, or, to put the matter in another way, to paint his own picture, and leave nature to take care of itself. Why, indeed, keep to nature? Some would say the "Silly Symphonies" are an improvement on nature. They are in pastel shades, not natural colours, and they are the most successful colour films yet made. It is admitted that no two-colour system can produce natural colour photography, but why bother?

"Photograms of the Year"

THE new volume of *Photograms of the Year* just published well justifies the description given it in an American publication, where it is said that "through its tradition of dignity and conservatism, it still maintains first place as a guide to the year's progress in real photographic art."

The new edition—which is the forty-second consecutive annual issue—contains eighty-four pictures selected from among the finest work produced by the camera in the past year. They range over every subject and exemplify every style that attract and please the modern pictorial photographer. There is not a single one among those reproduced that is not worthy of the most careful study and examination, and there is not one from which every photographer, no matter whether he be an exhibitor or just one of the many that make prints to provide pleasure for himself and his friends, cannot derive interest, inspiration and additional skill in handling and presenting his subject.

As in previous years, critical and appreciatory notes of the pictures are contributed by Mr. C. J. Symes. It is often difficult for those not accustomed to the study of pictorial work to appreciate and understand all the qualities of a picture, even though they may feel to the full their æsthetic appeal; these notes will be of the greatest possible assistance and value to these non-analytic students. Those who, on the other hand, feel competent to criticise a picture in detail will still find the critical notes interesting, even if from another angle; they will be able to form their own opinions of the pictures and then to compare their conclusions with those of Mr. Symes.

The Editor of *Photograms*, Mr. F. J. Mortimer, in an article dealing with "The Year's Work," points out that at the present time pictorial photography appears to be freeing itself from the fads and fancies that have afflicted it in the past—even the quite recent past—and is settling down into a saner phase in which pictorial merit takes precedence of fashion, and beauty is valued more highly than mere novelty.

Certainly the pictures reproduced bear out this summary of the position, though it would be quite wrong to conclude that originality is lacking—it is not, but it has not been accepted as a substitute for more enduring merit.

A number of contributions from the Dominions and from foreign countries give a composite picture of the progress of pictorial photography all over the world. In almost every country there are advances to be chronicled—more work, better work, and happier work is being done everywhere.

A very valuable incidental feature of *Photograms*, the list of British photographic societies and camera clubs, is again incorporated in this year's volume, and it is to be noted that this very comprehensive list includes amateur cinematographic societies and postal clubs.

Photograms of the Year 1937 is the ideal gift book for all photographers and for all interested in pictures; a copy will make a Christmas present that will be appreciated in every quarter. It is obtainable from all booksellers, newsagents and bookstalls, or direct from the publishers, Messrs. Iliffe and Sons Ltd., Dorset House, Stamford Street, London, S.E.1. The price is 5s. in paper covers and 7s. 6d. in cloth boards, postage being 6d. in either case. A. L. M. S.

READERS' PROBLEMS

Selected queries on topics of general interest to readers will be fully dealt with under this heading week by week. Other replies appear as usual on the last page.

Alpine Photography.

I am in Switzerland at the beginning of each year, and my photographs turn out well on the whole. I am often, however, dissatisfied with the tone values in the landscapes and snow effects. Can you give me a tip or two on this particular feature? *R. E. M. (Highgate.)*

We could have offered more definite advice if we could have seen some samples of both your negatives and prints, and had known something of your usual methods of working. As it is, we think our best course will be to outline the procedure best calculated to secure satisfactory results, and you can then decide what modifications you can make.

As you are aware, the light on snow is often of a yellow, orange or reddish colour, while the shadows are more or less definitely blue or violet. The same sort of thing applies in the case of clouds and snow-clad peaks against blue sky. These colour differences are often very marked when examining the image in a reflex camera.

The reddish tones, even if pale, suggest the need for panchromatic material, and the blue tones for a yellow filter. The factor of the filter must be found by experiment with the particular emulsion used.

Exposure must also be carefully considered, especially in connection with the extent and distance of dark objects and deep shadows, and the desirable detail to be shown in them. Pine woods in the foreground, for example, are a frequent stumbling-block. There is the common difficulty about striking a happy medium between the exposures appropriate to the lighter and the darker parts of the subject respectively.

As usual, it is important to make sure that the exposure is sufficient to register the detail in the darker parts of the subject whenever they play a prominent part in the picture. It is equally important not to carry development so far that the lighter tones acquire such density that they are not differentiated in the print. Perhaps your dissatisfaction with some of your results is a tendency to "soot and whitewash," a common fault in such subjects—and a fatal one.

With very contrasty subjects, provided you use plates or film packs, you should make use of the water-bath dodge, which we have often explained. Finally, you will often find it advisable to select a paper with a long scale—one of the "soft" variety.

Conjugate Foci.

In working out the measurements for an enlarger how can I find, for different degrees of enlargement, the distance from lens to negative and from lens to easel? *S. J. (Sudbury.)*

The two distances are known as the conjugate foci, and can be easily found for any degree of enlargement (or reduction). It is, of course, necessary to know the focal length of the lens to begin with.

Let F be the focal length of the lens, and N the number of times of (linear) enlargement—2 times, 3 times, etc.

(a) Lens to easel $= (N+1) \times F$

(b) Lens to negative $= F + \frac{F}{N}$

That is, for (a) add 1 to the number of times of enlargement, and multiply by the focal length. For (b) divide the focal length by the number of times of enlargement, and add to the focal length.

Suppose we want to enlarge to 2 diameters with a lens of 6-in. focal length:

(a) $(2+1) \times 6 = 18$ in.
(b) $6 + \frac{6}{2} = 9$ in.

Copying same size (1 diameter):

(a) $(1+1) \times 6 = 12$ in.
(b) $6 + \frac{6}{1} = 12$ in.

That is, the distances are each equal to twice the focal length of the lens.

Here is a slight simplification. For (a) multiply the focus by degree of enlargement, and add focus. For (b) divide (a) by degree of enlargement.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

The FINISHING TOUCH

It is surprising to find how many amateur photographers there are who seem to consider mounting a matter of minor importance which bears little or no relationship to the finished print. In the following article some practical hints are given on this subject which may prove of value to those preparing prints for Christmas gifts.

THE successful photographer is an artist. By this it is not meant that he need be a master of the brush, but that he has developed the ability mentally to visualise tonal values and to discern good proportion. This ability is essential when deciding upon the composition of a picture.

The worker who possesses this faculty will naturally utilise it when mounting his prints, and devote as much attention to proportioning his mounts correctly as he does to processing his prints. He realises that the finished result is incomplete as a work of art unless both print and mount are in perfect harmony.

Choosing the Mount.

When choosing a mount it is well to remember its function—namely, to display the picture, and not, as seems to have been thought in the earlier days of photography, to offer a counter attraction.

It is most important only to buy photographic mounts or mounting paper sold definitely for the purpose, since these are free from chemical impurities.

As the percentage of prints most workers wish to mount is usually relatively low, it is worth while to select mounting papers of good quality. "Heavy-weight" should be used for sizes up to 15×12 in. For larger sizes, where a stouter base is required, the mount can be pasted carefully on ordinary white cardboard, or card mounting boards can be used.

As a general rule prints on a cream paper look best on cream mounts, and white prints on white mounts, but occasionally, if it is desired to emphasize warmth, a cream print may be mounted on a white base, and, conversely, coldness may be stressed by placing a white print on a cream base.

Before mounting, the print should be properly finished and trimmed. Its appearance will frequently be enhanced by applying a narrow black border. This will "tie in" the composition and prevent the eye running off the picture. This line may be printed in, but one drawn with carbon pencil is to be preferred, for the following reasons:—

(a) It is rarely possible to decide upon the exact trim when viewing a picture under the enlarger; (b) carbon is dead-black and shows up against the deepest tones in a print.

The line may be "fixed" by passing the edges of the print through a jet of steam emerging from a kettle spout. Care must be taken not to allow it to remain long in any one position lest the gelatine melts.

Placing.

It is impossible to set down a rule for determining what size mounts are required for different sizes of pictures. Experience and artistic discernment are the only guides which can assist the worker. A few general remarks may be useful:—

(a) Remember that for any one print there is only one size of mount which will ideally suit it.

(b) An equal margin of mount showing at the sides and top of a picture, with a somewhat larger one at the base will usually look best.

(c) If a print has unhappy proportions, endeavour to overcome these by placing it on a better proportioned mount.

In addition to the border, many prints can be given further "kick" if framed by a light double line on the mount. These lines are more easily drawn before mounting. Mark the position of the print, and then draw the framing lines in pencil.

For strong black-and-white prints, the lines can be ruled with a ruling pen in indian ink. For those of exceptionally warm tone an ink such as Vandyke brown may be used with advantage. The importance of dead accuracy need not be stressed, as nothing is more annoying than a crooked print or lines slightly out of alignment.

Mounting.

Mounting itself is a simple matter. For obvious reasons it is advisable to use an adhesive which is unaffected by damp. A good white dextrine mountant can be used with satisfactory results. This is obtainable as a thick white paste in tubes or pots.

Whatever type is chosen it should not be spread over the entire back of the print, but in a narrow band along the top and half-way down each side, keeping the adhesive a quarter of an inch from the edges. Avoid a thick coat, and allow the mounted prints to dry under pressure.

Dry mounting has many advantages over other methods. Not only is it clean and unaffected by damp, but it unites a print to the mount in a way no other adhesive can do, the finished result is perfectly flat and it also enables the use of more ambitious treatment.

An Effective Mount.

One method which displays the print to advantage is the following: For this, in addition to the mount and photograph, Japanese tissue and black mounting paper are required.

As before, a thin black border is given to the print. The tissue is cut larger than the photograph (half to three-quarters of an inch at top and sides and one and a half to two inches at the base). Owing to the translucent nature of the former the black paper is visible when mounted underneath. To obtain this effect it should be cut slightly smaller than the tissue. The resulting grey tone forms a perfect link between print and mount.

First attach the underlay of black paper, then the Japanese tissue, but this is not mounted beyond the limit of the print. When marking the position of the former mark also that of the print, which is then mounted on the overlay.

If a number of similar prints are being mounted, templates made from sheet tin the sizes of the underlay and tissue will save endless time.

Titling.

The writing of a title or signature should not be done carelessly. Many workers seem to think a big dashing signature or heavy title necessary for even small prints. It is better to have no title at all than one badly written or out of proportion.

Because of its beauty and legibility Roman type is the ideal form of lettering, and should be used. Care must be taken to get the letter forms correct, as nothing lets a print down more in the eyes of the critical than badly proportioned type. Quarter-inch lettering, very lightly pencilled, is quite large enough for 12×10 photographs.

J. H.

FIGURE at HOME

By TREM PASSINGHAM.

"Those Thrillers." 5 secs., f/4.5. Agfa Pan.

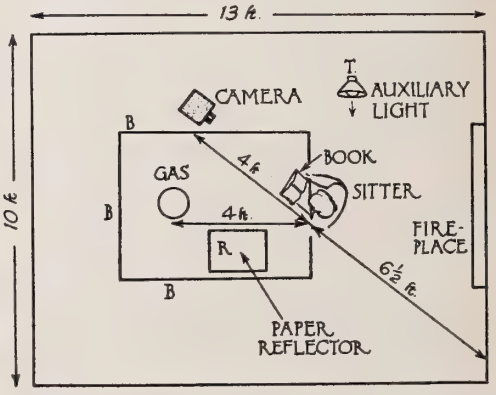

Diagram showing arrangement of sitter, lights, reflector and camera in making the picture "Those Thrillers." The spots marked "B" would have been unsuitable for the subject with this lighting.

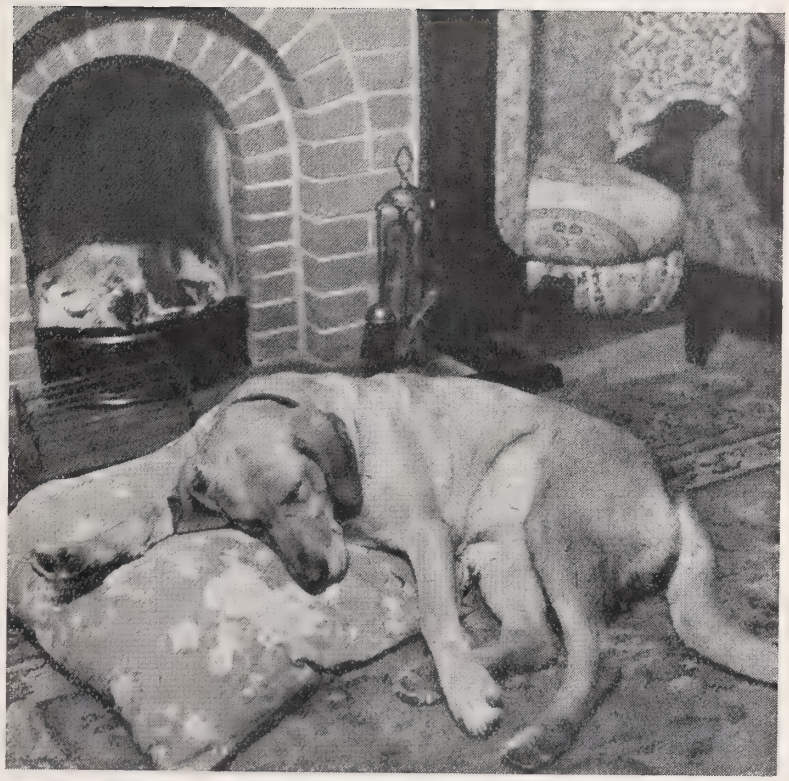
IF your house is lighted only by gas, or if you have electric light but cannot afford a set of photographic lighting equipment, don't let your camera hibernate in a cupboard. With the ordinary lighting, a tripod and a few easily contrived "gadgets," you will find it pleasurably simple to make quite effective home portraits and figure studies of very satisfactory quality.

To ensure success you must do a little careful preliminary planning. Load the camera with super-sensitive panchromatic film, the faster the better, as the length of exposure is thus greatly reduced. No light filter is necessary.

Aim at getting into your photographs that touch of sincerity which makes a convincing portrait, not a mere likeness. Your sitter should be occupied and interested, not just sitting. The rug-maker of my illustration was enthusiastically busy with her pattern while the camera and lighting were being arranged, so that when the exposure came she was not in the least tired or bored.

The clothes of the sitter are important; fairly plain self-coloured materials, not too light, are best if the background is dark, and vice versa.

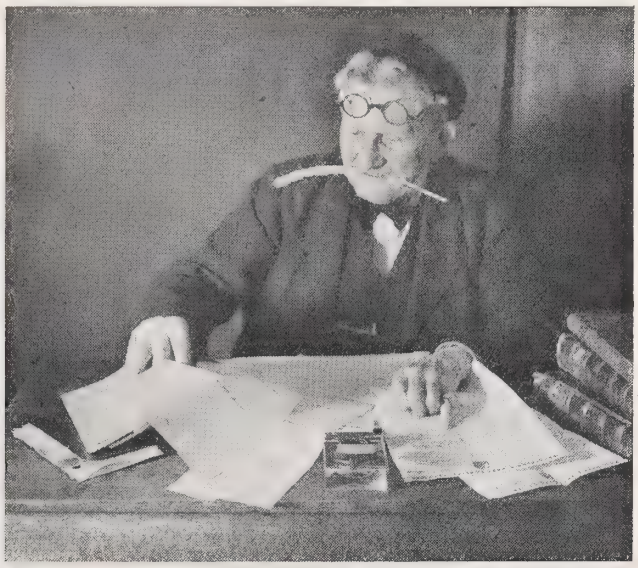
The length of exposure varies with the square of the distance of the subject from the light, so the face of the sitter should usually be at a distance of, say, four to six feet. With one incandescent gas burner at five feet and Kodak or Selo S.S. Panchromatic film 10 to 12 seconds at f/8, 7 to 8 seconds at f/5.6, and 5 seconds at f/4.5 should be enough. With one 60-watt electric light use three-quarters of these times.



"The Rug-maker." 5 secs., f/5.6. Agfa S.S. Pan.

To obviate movement during these time-exposures it is advisable for the subject to be steadied by leaning on elbows or against furniture.

Now turn to "Those Thrillers," which is a typical



STUDIES by Artificial Light

example. The diagram shows how the camera and subject were placed, with a good space between subject and background, thus rendered dim in the picture. Any light-coloured objects which would show up in the photograph should be removed from the background. As the single top-light would have thrown harsh shadows on the lower parts of the face, light had to be reflected on to it from below by using a large piece of white paper (R in diagram) under the gas, slightly propped up to reflect the light in the desired direction. The book also acted as a reflector. Finally, it was necessary to illuminate the chair on the sitter's right by directing the rays of an ordinary electric torch from a side table (T in diagram), thus giving a pleasing sheen to the hair. The torch must be so arranged that its beams fall on the hair and not on the face, or a very harsh effect will result.

"Warm Comfort." Flashlight. 4 grs. Agfa powder at 6 ft., f/5.6. Kodak S.S. Pan.

The picture "Warm Comfort" is included to show how flashlight throws up unwanted details in the background. This is very difficult to avoid, owing to the searching quality of flashlight. It is very suitable for some subjects, but the mass of detail it reveals is not disclosed until after the negative has been developed. By using a single light, either gas or electric, or photoflood lamps in reflectors, if they can be afforded, the light can be concentrated and is more under control. It is highly desirable for the production of successful pictures of this sort that the interest should be centred on the figure itself.

"The Family Lawyer."

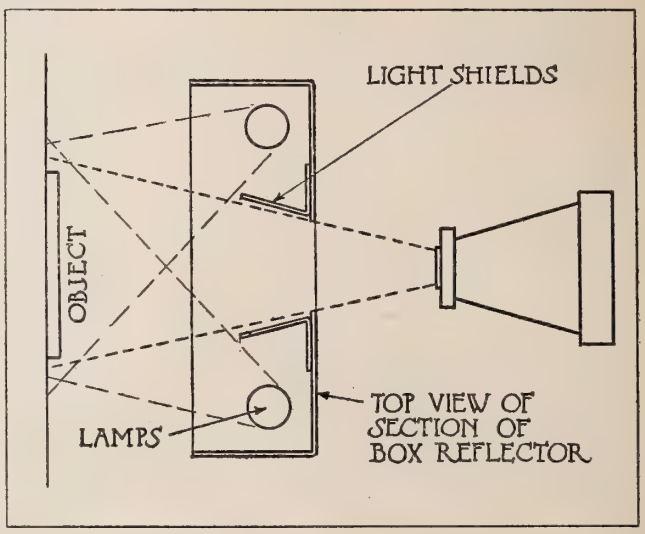
"Concentration." 7 secs., f/5.6. Kodak S.S. Pan.

Working on the lines described above, you can get studio effects, using the real backgrounds of your home.

Readers' Hints, Tips and Gadgets

ILLUMINATION DEVICE FOR COPYING.

AN extremely simple and efficient device for copying small originals can be made from materials to be found in nearly every home, at trifling cost.



Obtain a box 18–24 in. long and some 10 in. wide. A depth of 4 in. will do. Remove a quarter or one-third from the back, and make a hole one inch in diameter at each end for standard lampholders, wired in parallel to an adapter.

If the box is now placed on one of its long sides on the table, and its open side towards the object, it will be found that the latter can be brilliantly and evenly illuminated. To prevent any direct light reaching the camera, cardboard shields are arranged as shown. Paper reflectors can be fitted if desired, or, for the utmost power, tinfoil, or tinplate.

Using two 60-watt frosted bulbs, and a lens at f/8, with a plate rated at 100 H. & D., exposure is about fifteen seconds.

It is essential that the camera have a focussing screen, and be mounted on a firm, but movable base. An adjustable clamp and a 14-lb. weight will serve. Should only single extension be available, experiments can be made with supplementary lenses of varying foci (6–12 in., for example). A friendly optician would lend a few old spectacle lenses. With these, of course, a small stop must be used. If difficulty is experienced in getting very small objects in focus, move the object, not the camera. Paper negatives could be printed with this apparatus.

M. K. KIDD.

CHRISTMAS GIFTS FROM SPOILT PLATES.

IN spite of the enormous number of roll-film users to-day, and the influx of "miniature" workers, there are still many users of plate cameras, of quarter-plate size and larger. The following suggestion should be welcomed by these photographers as indicating not only a method of disposing of old and spoilt glass negatives, but also providing some attractive Christmas and New Year gifts.

Fig. 1. Prints mounted between glass, some with calendars attached.

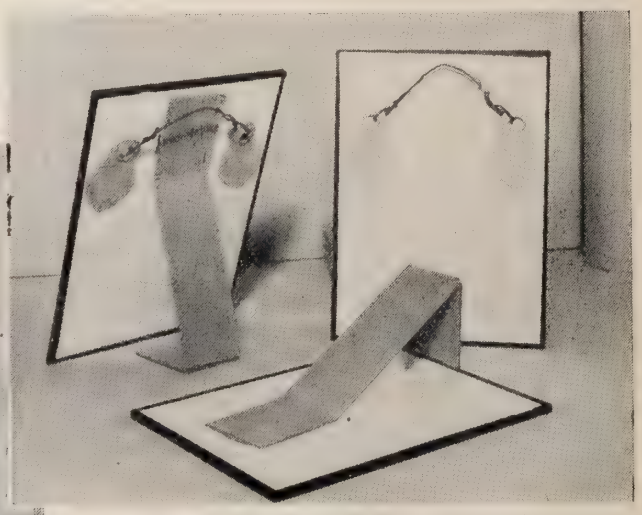


Fig. 2. The backs of the mounted prints.

First clean the negatives by removing the film in very hot water with a stiff nail-brush. Prints of suitable subjects are made, and of the same size as the plates. Each print is then sandwiched between two clean glasses and bound with passe-partout binding-strip, as shown in the illustration (Fig. 1). If necessary a calendar can be attached to make it suitable for the present season.

From the local sixpenny stores stick-on hangers for passe-partout work can be obtained and fixed to the backs of the mounted prints, or struts can also be obtained, which will enable them to stand up. This is shown in Fig. 2.

If necessary, titles can be added to the prints in white ink before they are bound up, or titles and greetings can be neatly written on a separate slip of black or coloured paper and affixed either to the print or the back.

L. GORDON PAULE.

"So tired"

But an ideal subject for an indoor picture

ENSIGN INDOOR LIGHTING OUTFITS

ENSIGN MULTIFLOOD

The Ensign Multiflood can be turned in any direction, and will hang or stand anywhere.

Brilliant light just where you want it.

The large 12-in. reflector mounted on a universal joint enables the light to be projected in any direction. The stand will stand anywhere, hang on the back of a chair or from a picture rail. Outfit includes reflector with Bakelite lampholder, 6 ft. of flex and plug, and universal head stand. Packed complete in box. PRICE, without lamps..... **6/-**

OSRAM PHOTOFLOOD LAMP, any voltage, **2/6.**

ENSIGN PHOTO-SPOT

Portable Spotlight Outfit

To obtain really original and dramatic lighting effects a good spotlight is essential. The Ensign Photo - Spot packs away into a small space and operates from any home lighting point. No. 2 Outfit, with case and spotting attachment (without lamp)..... **£1 17 6**

Osram Photoflood Lamp, any voltage.....**2/6**

ENSIGN SYNCHROFLASH OUTFITS

For Synchronised Indoor Snapshots by Flash-bulb or Flash-powder. A simple means of ensuring perfect flashlight pictures. Both the shutter of the camera and the flashbulb are controlled by the camera release. Easily fitted to the camera. Models for all types and shutter. Prices from **10/6**

ENSIGN PHOTO FLASH-BULB OUTFITS

Operated from an ordinary torch battery, these Outfits ensure instantaneous pictures, without smoke, smell, or noise.

THE SHAPE OF THINGS TO COME

We have sometimes heard it questioned whether miniature photography is likely to be a phase followed by an overwhelming reaction towards larger cameras. Here are our views on the subject, supported by a little inside information. The miniature camera is here to stay ; furthermore, it will get smaller and smaller. Eventually, we think that a $2\frac{1}{4} \times 2\frac{1}{4}$ negative will be considered the very limit in size, and that the 24×36 mm. negative will be thought a medium size. In support of our theory we will adduce the fact that there are shortly arriving in England several high-class precision cameras for 24×24 mm. negatives. The most outstanding of these is the " Robot," which has achieved tremendous popularity during the eighteen months it has been on the Continental market. This camera has interchangeable lenses, an ingenious patent focussing system, and a clockwork shutter which is wound once for every twenty-five exposures. Pictures can be taken at machine-gun speed, as the act of depressing the release both fires the shutter and transports the film. Besides this, there are a number of *genuine* vest-pocket miniature cameras in the offing—one example of which is now practically ready for release. This takes single 24×36 mm. exposures, has a built-in range-finder, exposure meter, and a set of filters, but is little bigger than a match-box. In the forthcoming number of *The Amateur Photographer* we propose to give some more information relating to cameras of revolutionary design which will shortly be on sale in England, and will, of course, first be seen at R. G. Lewis'.

We are the leading Leica firm. Besides the cameras themselves we stock and should be glad to demonstrate all the auxiliary scientific apparatus, copying equipment, projection apparatus, etc., that go to make the Leica the " universal " camera.

We should be pleased to take any existing instrument, particularly miniature cameras, in part exchange for a Leica.

Leica IIIa, f 3.5 Elmar.....£34 0 0
Leica IIIa, f/2 Summar.....£43 0 0

THE FOLLOWING LIST REPRESENTS A VERY SMALL SELECTION OF OUR GUARANTEED SECOND-HAND MINIATURE CAMERAS AND ACCESSORIES, ALL OF WHICH ARE SUBJECTED BEFORE RESALE TO THE MOST CAREFUL TESTS. OUR USED MINIATURE CAMERAS MAY BE PURCHASED WITH THE SAME DEGREE OF CONFIDENCE AS NEW ONES, THE PURCHASE OF APPARATUS FROM US IS AT ALL TIMES A GUARANTEE OF ITS MECHANICAL AND OPTICAL PERFECTION.

A Few Exceptional Cameras with Extra-Wide Aperture Lenses. Specially recommended for Winter and Artificial Light Photography in general.

Makinette, a special model with special front, Leitz view-finder, f/2 Supracomar lens, Rapid Compur shutter. (Cost approximately £30).....£15 15 0
Contax Model III, f 1.5 Sonnar lens. As new £63 10 0
Leica Model IIIa, f/1.9 Hektor lens. As new £45 0 0
Exakta Multispeeds Model B (latest lever-wind type), fitted inproved Dallmeyer f/1.9 Super-Six lens. Indistinguishable from new.....£26 10 0
Contax Model I, latest 1936 model, guaranteed very slightly window-soiled only, f/1.5 Sonnar lens, with carton and instructions booklet.....£42 10 0
Another, as above, but second-hand. Condition as new £39 10 0

CONTAXES :

Contax Model III, f/2 Sonnar lens, ever-ready case. As new £55 0 0
Contax Model I, latest type range-finder, f 2 Sonnar lens. As new.....£29 10 0
Contax Model I, slow-speeds shutter, f/2.8 Tessar. Practically as new.....£19 10 0
Contax Model I, slow-speeds shutter, f/3.5 Tessar. Practically as new £17 10 0

LEICAS :

Leica Model IIIa, f/2 Summar lens, ever-ready case. As new in every way.....£35 10 0
Leica Model III, chromium, f/2 Summar lens. As new in every way.....£31 10 0
Leica Model III, black, f/2 Summar lens. Practically as new.....£29 17 6

LEICAS (contd.) :

Leica Model III, chromium, f/3.5 Elmar. As new £24 15 0
Leica Model II, chromium, f/2.5 Hektor lens. As new £22 10 0
Leica Model II, chromium, f/3.5 Elmar lens. As new £21 10 0
Leica Model II, black, f/2.5 Hektor lens. As new £20 10 0
Leica Model II, black, fitted magnification for range-finder, f/3.5 Elmar lens. Excellent condition £19 10 0
Leica Model I, non-interchangeable, f/3.5 Elmar, case. Good condition.....£7 15 0
Leica 250, f/2 Summar lens, ever-ready case. Cost £57. Excellent condition.....£40 0 0
Leica Model III, black, f/3.5 Elmar, case. As new £23 15 0
Leica Standard Model, f/3.5 Elmar, ever-ready case. Excellent condition £11 17 6
Leitz 5-cm. f/2 Summar, non-collapsible... £9 17 6
Leitz 9-cm. f 4 Elmar. As new.....£8 17 0
Leitz 13.5-cm. f/4.5 Elmar (chromium, coupled). As new.....£10 0 0
Universal Finder, black, as new, £3 : Chromium, as new, £3 5s. ; Chromium Angular Finder, as new, 32s. 6d. ; Negative Viewer with opal plate, 32s. 6d. ; Flashlight Attachment, £3 ; Reflecting View-finder, 25s. ; Megoflex Attachment, £3 15s. ; Frame Finder, with adjusting mask, 25s. ; Fikus Lens Hood, 12s. ; Slow-speeds Attachment, £2 ; Swing Filter for Valoy (Fylto), 25s. ; Leitz Micro Attachment, in case, as new, £7 ; Leitz Universal Setting Device, Bazoo, as new, £2 17s. 6d.

Other Miniature Cameras fitted with coupled range-finders :

Nettax (only a few weeks old), 2 filters, ever-ready case. As new. Cost £34 10s.....£26 10 0
Super Nettel, f/2.8 Tessar, case. As new....£17 10 0
Dollina II, f 2.8 Tessar. As new.....£13 17 6
Voigtlander Super Bessa, f/4.5 Helomar lens, filter, Compur Rapid. As new.....£12 10 0
Super Ikonta 530/16, f 2.8 Tessar. As new..£20 0 0
Super Ikonta 530/2, f 3.8 Tessar, Rapid Compur, ever-ready case. As new.....£17 17 6
Super Ikonta 530/2, f 4.5 Tessar, Rapid Compur, case. As new £13 18 6
Super Ikonta 530/2, f 4.5 Tessar, normal Compur, case. As new £13 0 0
Plaubel Roll-Op, fitted f/2.8 Anticomar lens. As new £15 15 0

MINIATURE REFLEXES :

10.5-cm. f 4.5 Xenar Telephoto, for Reflex-Korelle. As new.....£5 18 6
Reflex-Korelle, f/2.9 Radionar, ever-ready case. As new £10 10 0
Ikoflex I, f/4.5 Novar, Derval shutter. As new £5 17 6
Welta Superfekta, f/2.8 Tessar, 2 filters. As new £18 10 0
Primarflex, f/3.5 Tessar. As new.....£27 10 0
Exakta Model C, latest lever wind, f/2.8 Tessar, 3 slides and focussing screen. As new.....£24 10 0
Exakta Model B, f 2.8 Tessar, ever-ready case. As new.....£21 10 0
Exakta Model B, f 3.5 Tessar, case. As new £17 10 0
Exakta Model A, latest lever wind, f/3.5 Exaktar £11 15 0
Exakta Model A, f/3.5 Tessar, Excellent condition £13 17 6
Exakta Model A, f/2.9 Xenar. Excellent condition £12 17 6
6-in. f/5.6 Dallon Telephoto, for Exakta. As new £6 10 0
Sashalite Synchronised Flash Attachment for Exakta 30s. 0d.
Reflex-Korelle, improved shutter, f/2.8 Tessar. As new.....£15 10 0
Pilot, f/3.5 Tessar, Compur. Excellent condition £11 17 6

MINIATURE REFLEXES (contd.) :

Automatic Rolleiflex 6×6, f/3.5 Tessar, Rapid Compur, case. As new.....£19 17 6
Automatic Rolleiflex 6×6, f/3.5 Tessar, Compur, case. Excellent condition £15 15 0
Automatic Rolleiflex 4×4, f/2.8 Tessar, case. As new £15 15 0
Automatic Rolleiflex 4×4, f/2.8 Tessar, Rapid Compur, case. As new.....£19 17 6
Rolleicord, f/3.8 Triotar, ever-ready case. As new £11 7 6
Rolleicord II, f/4.5 Triotar, ever-ready case. As new £11 10 0
Rolleicord II, f/3.5 Triotar, ever-ready case. As new £12 17 6
Noviflex, f/2.9 Trioplan, filter, case. As new £9 17 6
Voigtlander Superb, f/3.5 Skopar, filter, Proxars. As new.....£11 15 0
Foth-Flex, f/3.5 anastigmat. Excellent condition £6 10 0
Welta Perfekta, f/3.5 Trioplan, Compur.....£8 7 6
Rubyette Model II, revolving back, f/4.5 Dallmeyer lens, 3 slides. As new.....£8 17 6

MISCELLANEOUS :

Ensign Autorange, fitted f/4.5 Ensar, Compur shutter, case. Excellent condition.....£7 15 0
Foth-Derby, f/2.5 lens. Excellent condition..£5 5 0
Dolly Certo Super Sport (for 12 or 16 pictures on $3\frac{1}{4} \times 2\frac{1}{4}$ film), f/2.8 Tessar, in immediately detachable Compur shutter, 3 slides, focussing screen. As new £11 15 0
Voigtlander Virtus (16 on $3\frac{1}{4} \times 2\frac{1}{4}$), f/3.5 Skopar, Excellent condition.....£6 5 0
Ikonta 520, f/3.5 Novar, Rapid Compur. As new £6 10 0
Baldax (16 on $3\frac{1}{4} \times 2\frac{1}{4}$), f/3.5 Trioplan, Compur. As new £5 15 0
Nagel Vollenda (V.P. size), f/4.5 Radionar, Pronto shutter. Excellent condition.....£3 17 6
Plaubel Makina Model II, f/2.9 Anticomar lens, coupled range-finder, 3 slides and F.P. adapter..£25 0 0
Tele-Makinar Lens, for Makina. As new..£7 15 0
Planovista, only a few weeks old, f/2.7 Plasmat, Rapid Compur, case. As new.....£11 15 0
Planovista, f/3.5 Trioplan. As new.....£8 10 0
Dollina I, f/2.9 Radionar, Compur shutter. As new £6 17 6
Kodak Retina, f/3.5 Xenar, filter, case.....£6 19 6
Kodak 620 Duo, f/4.5 lens, 6-speed shutter. As new £4 0 0
Kodak 620 Duo, f/4.5 lens, Compur shutter. As new £6 18 6
Kodak 620 Duo, f/3.5 lens, Compur shutter, case. As new.....£7 17 6

ELECTRIC EXPOSURE METERS :

All guaranteed to be as new.

Photoskop, in case (cost £5 5s.), £1 5s. ; New Model Avo, £2 ; Zeiss Helios, £3 5s. ; Weston Model 627 (latest but one), Universal, £3 ; Leica meter, £3 ; Sixtus, £3 18s. 6d. ; Prinsen, £2 ; Largodrem, 17s. 6d.

ENLARGERS :

Praxidos Automatic 6×6 cm., No. 506, with tall lamphouse and double condenser. Cost £21 13s. 6d. As new £15 15 0
Ensign Automatic Miniature Magnaprint. As new £6 5 0
Vertex 6×6, f/4.5 lens, Shop-soiled only....£6 18 6
Leitz Fylab, to take Leica lens.....£6 5 0
Zeiss Automatic Miraphot for $3\frac{1}{4} \times 2\frac{1}{4}$ negatives, f/4.5 Tessar.....£7 15 0
Zeiss 9×12 cm. Automatic Miraphot, f/4.5 Tessar. As new £9 15 0
Ensign Midget Magnaprint, f/6.3 lens. As new £3 10 0

Write for our special booklet, " Miniature Enlargers," in which all types of instruments are fully described and discussed.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

"MINIATURE" NOTES

Short articles, illustrations, hints and tips, formulæ, reviews, queries and replies dealing with Miniature Camera work will appear under this heading every week.

The Miniature-sized TRUE REFLEX

By C. A. BROMLEY.

MANY a user of an "old-fashioned" quarter-plate reflex must hesitate before he decides to change his cumbersome but faithful old friend for the more portable miniature camera. To a photographer accustomed to seeing every subject in full detail on the focussing screen before he makes an exposure, the view-finder, however accurate, and

Fig. 1. In the Library.

however clear and sharp the picture that it gives, must seem at best something of a makeshift. And a range-finder, even though used in conjunction with a depth-of-focus table, gives no really vivid picture of the amount by which a background or a secondary subject will be out of focus.

For the reflex user who wishes to "go miniature" without revising his methods of work the solution is obvious—get a miniature reflex. Of these there are two kinds: the twin-lens, and the "true reflex" in which a single lens is used both for finding and taking in exactly the same way as in the larger cameras of the same kind.

The True Reflex.

Personally, I prefer the single-lens reflex, as it not only gives in its finder exactly what will appear on the negative, but also possesses the advantage of permitting a change of lens without difficulty—no second finder lens is required, and there is no range-finder coupling to do. Screw in the new lens, whether properly designed and fitted for the camera or not, and if the picture is right on the screen it will infallibly be right on the negative.

Of the available "true reflex miniatures," I chose the "Exakta," mainly because I fell in love with some of the points in its design, besides approving of the limitation to eight as the number of exposures on each spool of film. The winding of shutter and film by a single knob makes double exposures impossible, while the refusal of the mirror to drop until the shutter is wound gives due warning that the camera is not ready for taking a photograph.

As a normal-focus lens for general use, embracing the usual angle of view, a 3-in. lens working at f/2 was chosen. The wide aperture, besides having the obvious advantage of speed, is a great help at times for focussing in a bad light, even if, as in taking an interior, the lens is ultimately stopped down.

Figure Work.

For figure work where near approach to the subject is not possible, for portraits in which distortion would be evident if the camera was brought too close, and for landscapes where a narrow angle of view is desirable, I added a second lens of telephoto type, having a focal length of just under 6 in., and an aperture of f/5.5. This gives a magnification of nearly two diameters over the image thrown by the normal lens, and proves in practice to be of the greatest possible value.

But there is, of course, no question but that the lower speed of a telephoto lens and the greater susceptibility to camera-shake of the enlarged image, do tend to limit its use to occasions when light is plentiful or a tripod possible.

Fig. 2. At the Water's Edge.

In spite of its small size and ready portability, there are few subjects outside the range of such an equipment as this. In common with all the miniatures, whatever their type, the camera can be handled rapidly enough to catch the fleeting subject before it is too late. The change from plates to films, once thought of as being a handicap to serious work, has in recent years quite ceased to be so, for fast panchromatic emulsions, at one time the exclusive preserve of the user of plates, are now on sale in roll-film form in every shop.

The change to films and the small size of the negative have turned out in my case to be a help to good work. The small size of the negative involves making all prints by projection, and while focussing the enlarger it soon becomes second nature so to adjust the image that all unwanted parts are

Fig. 3. Trafalgar Square at Twilight.

omitted altogether from the prints. The result is that the prints, even if small in size, are in each case the best composition the negative will yield. In effect, the prints are trimmed but yet remain full size.

Depth of Focus.

Compared with the 2-in. lens of the true miniature camera of 24 × 36 mm. picture size, the 3-in. lens used on the "Exakta" naturally has rather less depth of focus. At the full aperture of f/2 it still has as much depth as an ordinary 5½-in. lens used at an aperture a little smaller than f/3.5; Fig. 1, which was taken at f/2, shows very good distribution of sharpness over the various planes. It had an exposure of 1 sec. by ordinary room lighting—to be exact, two 60 candle-power lamps in shades.

The depth of focus is again exemplified in the picture of the swans (Fig. 2), where it will be seen that the background, though blurred, is neither unrecognisable nor offensively out of focus.

Another photograph that the quarter-plate reflex could not have managed—at least under the same conditions—is that of Trafalgar Square at twilight.

This is really the most difficult time of all to get a good photograph, for the light, although terribly weak, is in character very like that of full day. In consequence, the large black areas of under-exposure which are perfectly acceptable in a true night photograph cannot be allowed, and full exposure is needed. Fig. 3 was given 1/10th sec. at f/2.3 on a super-speed panchromatic film, using a pale filter to keep the character of the sky.

Loading in the Hand

By DAVID CHARLES.

DAYLIGHT loading does not necessarily mean loading in sunlight, although I have seen people try it. Nor is it easy to load and unload a camera whilst holding it "in the hand." The proper place and method are in the shade and on the lap or other steady and comfortable support, so that both hands

How not to load a Retina.

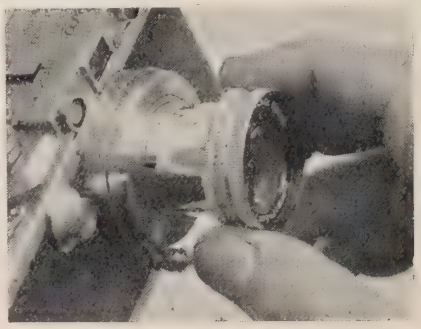
are free. Yet films can be changed in the open air, and the writer has done so on many occasions when circumstances have demanded it. For instance, when making a long series of views there may be nowhere to sit excepting upon the mud-flats or the seaweed-covered timbers. Even a coal truck is a better support for the camera than none, for it is usually possible to find an old letter or a pocket handkerchief to spread between the grit and the camera. Even if there is no wall or tree to cast a safe bit of shade, the shadow of one's own body is always available, though some people seem to forget its existence.

Taking Precautions.

But even with the sun right overhead, and with nothing to sit on, reloading can still be done, by taking certain precautions. But *not* like the man in the illustration. The camera should be entirely closed up before opening the back, and the back, when opened, should not be allowed to hang free, but should be rested against the coat. This prevents straining the joints of the camera, as well as possible smearing of the lens surface with the fingers. Then it is advisable to avoid having the film uppermost, since the strongest light is there to creep in where it can. Keeping the films between the camera and the coat is better. Also the work must be done neatly and swiftly; with ordinary spools no more red paper than is absolutely essential for a good start should be wound on, and a finger should be kept on the roll to prevent any slight loosening, which will assuredly allow the strong light to enter and to fog at least the edges of the film. All these remarks apply just as much to taking out an exposed film as to the putting in of a new one.

"At the Ready"

By G. K. SEAGER.



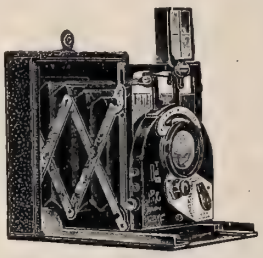
THERE is nothing more unnerving than a sudden uncertainty as to whether the camera is properly adjusted or not. It is therefore very useful to acquire the knack of getting the miniature into the "ready for action" state with the minimum of fumbling or delay. This knack can be very rapidly acquired by means of a few minutes' "camera drill" in private, opening and closing the camera until the movements become absolutely automatic.

In several miniature cameras the lens can apparently be pulled out as far as it will go in more than one position, but it is only at one point of its circumference that the true full extension is reached, and at which it will lock properly. If not so locked pictures will inevitably be out of focus.

Making Sure in Advance.

The best time to see to this matter is when closing the camera after use. If the lens is pushed in at the proper spot it can be pulled right out when wanted without being looked at, and it can then be locked without hesitation. On the Leica a horizontal arrow must be visible (see illustration) before the lens can be locked, but it is frequently desirable to be able to make this adjustment with certainty without having to look for it. After all, the expert photographer wants to watch his subject rather than fiddle with his camera.

In this connection there is another mistake which, once known, need never arise. When the diaphragm ring is situated close to the lens hood, too full a grasp of the latter may be found to turn the stops in the act of locking the lens. In the illustration the user has actually stopped the lens to f/6.3,

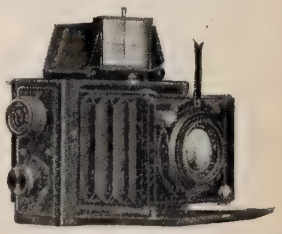


Locking the lens of a Leica.

because his thumb and finger are holding the stop-ring more tightly than the milled edge of the hood. Exposures would naturally be considerably "under" if this were not detected in time, and it is only too easy to treat the diaphragm-ring with unbecoming roughness, but by making a practice of holding the hood only any possible trouble is easily avoided.

Miniature Plate Cameras

By R. M. FANSTONE.



The Baby Sibyl—a current model.

WHILE opinions as to the merits of the miniature camera are still divided, an objection on the part of some photographers is that too many exposures are loaded into the camera at one time. Thirty-six, or even sixteen, is often too many for the needs of the moment. Another objection to the miniature camera is that there is no rise of front. These photographers might well consider how far the V.P. plate camera meets their needs. There for them lies the solution of the problems of miniature camera work without the objections.

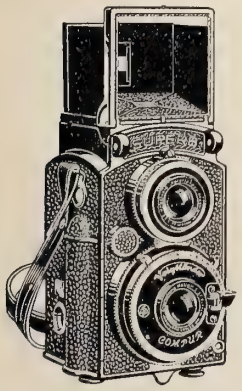
For Plates or Film Packs.

The fact that it is not so popular in these days permits the purchase of a V.P. plate camera second-hand for very much less than its original cost. There are several types available, and one at least, the Baby Sibyl, allows the use of a rise of front each way of the plate. Second-hand collapsible focal-plane cameras, such as the Ernemann, can also be found by those who regard the eye-level press camera as the snapshot camera *par excellence*. Except that they are not fitted with the modern range-finders these have all the attributes of the miniature film camera.

4.5×6 cm. Ernemann press camera, now only obtainable second-hand.

In addition to plates these instruments will take cut films or film packs, which are to be had in all sizes including the 4.5×6 cm.

When first introduced these instruments were not very popular. This was mainly on account of the fact that the plates and films of those days were not fine-grained, and fine-grain developers were hardly thought of. The modern photographer wanting large prints from small negatives, and wishing to have the use of movements associated with plate cameras, but which are missing from the miniature, will find a small plate camera well worth attention. There is sufficient depth of focus to permit scale focussing at large apertures, while there is always the ground-glass screen should the subject require it.



If miniature camera technique is applied to this type of instrument it will be as wide in its scope as any equivalent miniature camera built for roll film.

Modern Miniature Cameras

THE VOIGTLÄNDER "SUPERB."

THE Voigtländer "Superb" Camera is a twin-lens reflex, giving twelve exposures on 3¼ × 2¼ film. Each picture is 5 × 5 cm. (2-5/32nds in.) square. The focussing hood on the top of the camera springs open on touching a spring. It contains a magnifier for accurate focussing, and it is to be noticed that with the magnifier close to the eye the whole focussing screen, and not just the centre, can be observed. The magnifier can be turned out of the way if not required.

Focussing is performed by a lever under the taking lens, which rotates a ring so geared to the focussing mount of the finder lens that both lenses move forward together.

The camera focusses down to 2 ft. 8 in., and as the lenses advance the whole finder assembly, including mirror and focussing screen, tilts forward so as to ensure that the field of view of the finder shall always correspond exactly with that embraced by the film. The movement seems elaborate, but it certainly ensures that parallax in the plane of sharp focus shall be completely eliminated without making it necessary to curtail the finder image.

By folding down the front screen of the hood a direct-vision frame finder is provided, there being a square sighting aperture in the back of the hood to ensure correct positioning of the eye. Parallax correction is also provided here, the plate containing the sighting-aperture being movable up a graduated slide. It is surprising to find how large a correction is required when the camera is focussed upon objects at distances of a yard or less. The finder is particularly pleasant to use on account of the fact that the sides of the hood remain in position, thus excluding all extraneous light.

All the controls of the camera are visible from above. The focussing scale is on the circumference of the finder lens, stops are controlled by a knob on the front of the camera, and the speeds of the Compur shutter are engraved in reverse, and seen through a small reflecting prism. The setting lever of the shutter is on the left, and the release on the right, and there is a depth-of-focus table on the side of the focussing hood.

Loading the Camera.

The film is wound on by to-and-fro movements of a lever on the left of the instrument instead of by the customary knob. The back opens in two parts for loading, so making the film-chambers very accessible. To load, the film is drawn across the back of the camera in the usual way, passing over large ebonite rollers on either side of the picture opening. On closing the back, a third roller is pressed on to the outside of the paper to ensure that the film shall be really taut in the camera, while the usual pressure plate is provided to hold it flat in the focal plane. The film is then advanced by means of the lever until the figure "1" on the backing paper shows through a red window. As it advances, it passes over a knurled wheel, which operates a counter in the back of the camera. This is next allowed to run back to "1" by moving a release button, and the camera is ready for use. After the first exposure the film is wound on by to-and-fro movements of the winding lever until the figure "2" appears in the counter window. Six or seven movements of the lever are required to change the film between each picture and the next.

Two models of this camera are available, one with a Skopar and one with a Heliar lens. Both work at f/3.5, and are mounted in delayed-action Compur shutter. The finder lens in both cases is an f/3.5 Heliomar. The prices, which include a wire release, a leather neck-strap, a very full instruction booklet, and an exposure calculator, are respectively £17 12s. 6d. and £19 2s. 6d. Particulars concerning the camera, which can be obtained through any photographic dealer, may be had from Messrs. Schering, Ltd., 188–192, High Holborn, W.C.1, who are the British agents for Messrs. Voigtländer.

Miniature Camera Gossip

By LANCELOT VINING.

Fine Grain.

I WAS very interested in a recent article by Mr. Roy King on this subject, in which he states that sometimes, after taking the greatest care over the development of a film regarding temperatures of solutions, and even drying in reasonable time, he has found he is left with a grainy negative; whilst at another time, when the result was not important and no special care was taken over the processing, the result turned out to be grainless.

Another point he stresses is about the time of development; supposing the correct time for a certain film with a certain developer is eight minutes, Mr. King found that whilst there was no grain at eight minutes, fifteen seconds later grain was unpleasantly conspicuous. He adds, "I found this most apparent with such developers as the Borax M.Q., but far less so with paraphenylene-diamine." Some experiments in connection with this point have proved to me that he is correct, and that every second after the correct time has passed is producing grain, this being more pronounced if the film has been over-exposed than if it has been under-exposed. My experiments were made with a fast pan. film.

Bedtime. F/1.5, 1/25th sec.

Photographic Regrets.

I have many of these, and my greatest is that I have never kept a photographic record of the historic events which I have attended since I took up photography. I think my first record would have been Queen Victoria's funeral. This took place on a day of fog and the fastest plate on the market was of H. & D. speed about 250, so far as I remember.

My latest regret is that I missed the burning of the Crystal Palace. I was in London that night with my miniature camera, and it was not until I was nearly home that a friend asked me if I had the latest news of the fire. I had to explain that I had not even heard of it; as it was then nearly midnight I decided for bed, and went there very cross at having missed a real subject for the miniature.

I met James Jarché the next day,

The Gamblers. F/1.5, 1/25th sec.

and heard his tale of woe, which was much worse than mine. He had been playing bridge all the evening in a house close to the Palace, went to bed about eleven and read all about it in the papers the next morning.

Candid Home Photographs.

I do not think that many of my readers will wish to contradict me when I say that the majority of really pleasing miniature photographs are obtained when the subjects are unaware that there is a camera about. My two illustrations this week will, I hope, help to prove my point.

The "Gamblers" were in a room with the door slightly open, and there was just enough radio to "hide" the shutter, which was giving a 1/25th with my 2-in. Sonnar at f/1.5.

I feel rather guilty of being a "peeping Tom" over the other photograph. I had been told that the lady was in her bath and making a perfect picture, so I received quite a shock as I very quietly opened the door and found her sitting on the window-ledge in the altogether. However, I did just manage to expose before the nail-brush missed me. Stop and speed the same as above, very late on a June evening. This is my first and only attempt at the nude—so far.

A Correction.

A Streatham reader writes to say that at the Circus held at Olympia last year, his attention was called to a notice forbidding photography without permit. I did not see this notice, nor was I aware that it was exhibited. But this was perhaps because, except for the first and last days of the Circus, I was at home with a severe attack of "flu."

THE SECRET of SUCCESS

with the Miniature

By C. A. OLDROYD.

ONCE upon a time—isn't that how all true stories begin?—I was a firm believer in the big outfit, and it will come as a shock to some readers that my favourite camera was a 7×5 Ango with an 8¼-in. Heliar lens. With six double dark slides the weight was considerable, to say the least, and the running costs high in proportion.

And then I made the acquaintance of the "Orphan." It came about this way. On an extended tour of the Continent my large outfit broke down. Moving from place to place I was unable to collect the repaired camera for some time. So I looked round the second-hand shops for a temporary outfit, and an odd lot caught my eye. It *was* an odd lot, to be sure, in V.P. size, but no standard slides seemed to fit the little fellow. Neither lens nor shutter bore a maker's name, and the poor thing had seen better times; it was a true orphan.

Still, I took a chance on it, and invested a few shillings in the camera, the friendly dealer presenting me with a film-pack adapter, and after a general clean-up the "Orphan" was put to work—and I had the surprise of my life.

In nearly all cases the 10×8 enlargements from the little negatives were as good as similar ones taken with my large camera, the greater depth of focus of the f/6.3 lens made very accurate focussing easy, and the ease of handling could only be thoroughly appreciated by someone who had wrestled with a big outfit for some years. I took about two thousand negatives with this miniature, and a hundred or so were successful press photographs.

When my tour came to an end, I journeyed homewards with both the big outfit and the "Orphan." During the following weeks I used the big camera for all pictures round and about home, since the weight did not matter in this case. But when I, later on, took the "Orphan" for a week-end trip, he—she—it (have it your own way!) did not appear to be up to its usual form, and let me down with some particularly interesting snaps I was unable to repeat. In a weak moment we parted, and I wonder where the little "Orphan," faithful companion for two years, has eventually landed.

So back again to the big camera, but now the big outfit did not give me the good results of earlier years. At last, a great light burst upon me: I scored with the "Orphan" when I used it always, and no other camera. Similarly, I was successful with the large outfit when I used this exclusively.

The moral is: Rely on one camera, get to know it thoroughly, its range and limitations, and you will in time become an expert with this photographic tool of yours, and handling it will become second nature to you.

In my humble opinion this is the true secret of constant success with the miniature, or, for that matter, any other camera. Constant use of one outfit only, progressing through analysing and correcting your mistakes, and willingness to learn from your failures, and from more experienced fellow photographers, will help you to get the best out of your outfit, and make photography a real pleasure.

With a miniature, we have a much better chance of securing unobserved and life-like photographs than with an outfit of even moderate dimensions. Such snaps will have more human interest, and appear more "real," than posed pictures taken with large apparatus.

A miniature can really do all the average amateur requires, but to make a success of miniature technique, use only one camera, and master it. If unsuccessful, try again, and keep on trying till it will "eat out of your hand." It will—eventually.

***Fine-Grain Developers* (7).**

MERITOL, AND TWO MORE BORAX FORMULÆ.

A NEW developing agent, "Meritol," has recently been introduced by Messrs. Johnson & Sons, Ltd. To make the working solution, which has excellent keeping qualities, no chemical other than sodium sulphite has to be added, and the developer so made is capable of yielding negatives of very fine grain. The following is the maker's formula.

Meritol Fine-Grain Developer.

Hot water	20 oz. (1,000 c.c.)
Meritol (Johnson's)	140 grs. (16 grm.)
Sodium sulphite (anhydrous) ..	800 grs. (90 grm.)

Time of development for super-speed panchromatic films, about 35 minutes at 65 degrees Fahr.

The remaining formulæ given here are for metol alone, and metol in conjunction with glycin, borax being used as the alkali in both cases. These are both soft-working developers of conventional fine-grain type.

Metol-Borax Developer.

Metol	40 grs. (4.5 grm.
Sodium sulphite (anhydrous) ..	1 oz. (55 grm.)
Borax	40 grs. (4.5 grm.)
Water	20 oz. (1,000 c.c.)

Development time, 5 to 8 minutes at 65 degrees Fahr.

Rhodia Fine-Grain Formula.

Metol	45 grs. (5 grm.)
Sodium sulphite (anhydrous) ..	2 oz. (100 grm.)
Glycin	45 grs. (5 grm.)
Borax	90 grs. (10 grm.)
Water	20 oz. (1,000 c.c.)

Time of development, about 10 minutes at 65 degrees Fahr.

To avoid possible error, we would like to make it clear that in the formulæ published week by week under this heading the quantities given for sodium carbonate in all cases refer to the anhydrous salt.

Miniature Matters

A selection of readers' queries that deal with "miniature" photography will be answered here every week.

INTERCHANGEABLE LENSES.

Some of the additional lenses available for those miniature cameras in which several alternative lenses can be used are described as "long-focus" lenses, while others are called "telephoto" lenses. But I gather from the descriptions that in all cases the lenses are telescopic, in the sense that they give large pictures of distant objects. Is there any distinction between the two types? M. S. (Cowes.)

A telephoto lens is simply a long-focus lens of special optical construction. Whatever the construction, a long-focus lens gives a larger image than one of normal focal length, but it is not sound to regard such a lens as being equivalent in any way to using a telescope. It is often used on near objects as on distant ones, and is the standard type of lens for portraiture.

Any lens, other than a telephoto, whether of long focus or short, requires to be mounted at a distance of about its own focal length in front of the film, and the extra extension for a long-focus lens is usually provided, in miniature-camera work, by mounting the lens on the front of an extension-tube. The telephoto lens is one that for convenience has been specially designed to require an extension considerably less than its focal length. The difference between a 6-in. lens described simply as "long-focus" and a 6-in. telephoto lens is therefore that the former has to be mounted some six inches in front of the film, while the latter may only need to be three inches away.

In photographic parlance, the word "telescopic" means "collapsing like a telescope." It refers, in fact, to the mechanical details of the mount, and has no connection with the optical structure or performance of the lens itself.

GELATINE FILTERS.

I have read of the various effects that can be obtained by using filters of different colours, and am anxious to try some experiments to become more closely acquainted with the possibilities. Many filters, I notice, are obtainable in gelatine form at very low prices; is there any disadvantage in using them as compared with the usual glass filter? And how do I fix them over the lens?

S. C. D. (Devonport.)

The only real disadvantage of a gelatine filter is its extreme susceptibility to damage. One firm pressure with the finger on the surface will imprint on it an indelible finger-mark which will ruin it. For experimental purposes this does not matter at all, but when you have made up your mind which filters you wish to take into more or less regular use, you should replace the plain gelatine filters with new ones properly protected by being cemented between glass plates.

If your camera has a between-lens shutter you can cut circles of suitable size from the gelatine filters, unscrew the front cell of the lens, drop the filter in, and replace the cell. This avoids the necessity of making any mount at all. Cameras using focal-plane shutters generally have a lens that is not easy to take apart, and we suggest that if your camera is of this kind you might mount the filter between two pieces of card from which circular or square windows of suitable size have been cut, and hold the filter over the front of the lens by means of rubber bands passed round the card mount, and over some convenient projection on the camera or lens. When you obtain your final glass filters you will, of course, have them properly mounted in a screw-in or push-on metal mount of the usual type.

ANGLE OF VIEW.

Do all miniature cameras give the same angle of view? If not, how do the differences arise?

S. K. (Wolverhampton.)

The angle of view embraced by a camera depends on the ratio of the focal length of the lens to the diagonal of the picture. The ratio is usually about unity, larger figures meaning narrower and smaller figures wider angles of view.

THE BANTAM CAMERA.

A new miniature camera called the "Bantam" has, I understand, recently come on to the market. Can you give me the name of the makers?

G. M. (Durham.)

The "Bantam Special" is a new camera made by the Eastman Kodak Co., of Rochester, N.Y., U.S.A. So far as we know it is not yet on the British market but Messrs. Kodak Ltd., Kingsway, London, W.C.2, may be able to give you some information about it.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

How I make my EXHIBITION PICTURES

Methods and Ideals of well-known Pictorial Workers.

No. CCCLXIV.

Mr. MAURICE BROQUET.

From information communicated to our Special Representative.

"IT was about four years ago that I felt drawn toward the practice of artistic photography. Ever since I was ten years old I had been in the habit of taking photographs of small family groups, excursion parties, etc., like everyone else. Then one day I had the opportunity of seeing a collection of prints made by Mr. Herman Burton, whose work is outstanding in Belgian photography.

LIGHT AND SHADE. *Maurice Broquet.*

"The simplicity and beauty of those prints aroused in me a keen ambition to learn how to observe and bring out by means of the lens those innumerable subjects which attract the attention of the observer. Hearing that Mr. Burton directed the Belgian Photographic and Cinematographic Association in Brussels, I joined the club, and from that moment a fresh horizon opened out before me.

"It was there that I made the acquaintance of Mons. P. Dubreuil, whose helpful suggestions have been most valuable; and it was there that I came across the splendid 'A.P.', of which I became a careful reader, and from whose pages I have learned much of the greatest interest.

"Although I am not, like certain others, a small-print 'fan,' I do a good deal of miniature work. Using a Leica with an Elmar f/3.5 lens, I have nothing but praise for this type of camera; this is not said for publicity purposes—it is merely my genuine feeling on the matter.

"I consider that the use of a miniature camera is in itself a wonderful education, as the need for enlarging calls for the most exact and careful laboratory work. The least carelessness means that a really good print is out of the question. I always use Gevaert panchromatic films, often with yellow or red filters in order to obtain special effects. The exposure time I calculate with a photo-electric meter. I develop my films in a tank with metol, which gives a fine grain, by the time and temperature method.

"I do my enlarging by means of a condenser apparatus on bromide or chloro-bromide paper according to the type of negative. Very often I use a diffusing filter to minimise the grain or simply to obtain the soft effect so attractive in certain cases. I never retouch my negatives or prints except for the usual spotting in both cases.

"I like clean, straight photography, and consider that the processes necessary for this are no longer so much a matter of time considering the perfection now reached in the materials at our disposal. I always try to make a picture, as much as to observe the laws of composition, and do not hesitate, if these require it, to make exposures at any angle—risky as it may be, or even contrary to the laws of balance—so as to secure a picture the lines and masses of which respond to a true photographic composition.

"Again I must mention my special indebtedness to *The Amateur Photographer*, as well as to Messrs. Dubreuil and Burton, to whom I owe my photographic knowledge and success. Thanks to their most helpful advice I have been able to face the juries at the International Salons, and have been awarded the gold medal of the photographic section of the Exposition Universelle de Bruxelles in 1935."

(*A further example of Mr. Broquet's work is reproduced on one of the centre Art pages.*)

Pictorial Analysis

Every week the picture reproduced on the art page opposite will be analysed in detail for the benefit of readers of the paper who are seeking to improve their pictorial work.

"WINTER SUNSHINE," *by S. Insull.*

MUCH of the appeal of a snow picture, such as this, depends upon the fidelity of the rendering of the tone values. Here, the play of sunshine and shadow upon the surface, the subtlety of the gradations arising in consequence, and the more definite contrast afforded by local values of strong tone, are highly attractive features, and the composition, based as it is on a variation of the "S" curve of beauty, lends an interest of its own.

The curve in question is shown in reverse in this instance, but its effect is just the same. It starts at the top at the left-hand side; proceeds downwards towards the right; returns on a downward inclination to the other side; and again changes its direction to conclude in the bottom right-hand corner. Roughly, it follows the path of the stream, and, while the latter departs from the line of the true "S" curve, these variations are desirable in order to prevent the construction from becoming too obvious. It would not do, in a landscape subject, which is naturally of an informal character, to have anything in the arrangement that would suggest a design of a deliberately formal type, which is what would happen if the stream did actually follow the true curve.

Not only would it seem too good to be true, but it would also conflict with what our ideas of the course of a stream should be, and, besides, it would fail to harmonise with the natural features with which it would be surrounded. It is better that the form should be suggested rather than slavishly adhered to, and it is because it is so, in this instance that the composition seems to be so successful and pleasing to the eye.

The form is indicated in the sketch by the dotted line and, as far as line is concerned, it is the main basis of the construction and its most prominent feature. It is extremely useful in suggesting a connection throughout all parts of the picture, but, on account of its nature, it does little towards providing an indication of the centre of interest, i.e., unless it be taken that in enclosing it in one of its curves some emphasis is afforded. Actually, the point in question is indicated by the chiaroscuro or the arrangement of the light and shade. It occurs at (1), which is the highest light and a feature that naturally attracts the prime share of the attention. Its value is enhanced by its neighbouring shadow tone, which makes it seem brighter by force of contrast, and it has considerable force of position, being placed on one of the intersections formed by divisions of thirds vertically and horizontally. Any one of these four points, the others being unoccupied by anything of importance, provides a strong and forceful placing for the centre of interest, and the fact, in conjunction with the innate attracting power of the most brilliant light, does, in this case, make the point (1) the unquestionable dominating element in the composition.

It is through these several factors that the motive—the effect of sunlight and shadow on the surface of the snow—becomes so clearly stated. It is admirably conveyed, on the whole, and makes a decidedly attractive picture; but, all the same, it could be wished that there were less of the bits of twigs and foliage showing through the snow, for not only do they impair the impression of purity it should convey, but, to some extent, they spoil its texture. If they were wholly covered, as they might have been if the fall had been deeper, the texture would be better suggested and so also would the feeling of whiteness and purity.

In the winter-time, however, it is no easy matter to get everything as we could wish. The days are so short, and, if a fall of snow occurs, it is most rare that it is followed by sunshine. Moreover, if these conditions arrive and the fall is adequate, the advent of sunshine usually means a thaw, and, with the time for making exposures so limited, it is surprising that any result worthy of the name is achieved.

In these circumstances, therefore, we should not be hypercritical, and should view such pictures as have been obtained with some regard for the conditions under which they were secured, to say nothing of the discomfort and endurance that must have been involved. Still, it is wise to have such drawbacks as are likely to occur brought to mind in order that they may be avoided when the opportunity for making snow pictures does arise.

Nevertheless, there are many features in this effort that compel our admiration, and, in its fine impression of sunshine, it does attain a charm and attraction of an exceedingly high order.

PICTURES by Novices

SOME CRITICAL COMMENTS on the Beginners' prints reproduced on the opposite page

IN dealing with portraiture, one of the things that ought to receive a reasonable amount of consideration—and very seldom does—is the height of the camera in relation to the sitter. Children, in the act of playing on the floor, are taken from waist or eye level, and older models, even if carefully posed, are taken with the camera placed on any odd thing which happens to be about, providing it offers a steady foundation, without regard to its height.

Exaggeration and Emphasis.

If, as in the child example quoted above, the viewpoint is too high, the upper portion of the features—the top of the head, the forehead, the eyes and tops of the ears—is made to appear too large and on an exaggerated scale in comparison with the nose, mouth, chin and body, particularly if, as is usually the case, the camera is also placed too near the subject.

On the other hand, if the viewpoint is too low, the reverse obtains and the chin, nose, and the lower portion of the face generally are exaggerated at the expense of the upper.

It is true that advantage can be taken of the fact and certain weaknesses in facial characteristics corrected by the adoption of an appropriate viewpoint, but it needs experience before the device is exploited, and the use of emphasis in this direction is scarcely within the scope of the beginner. The disadvantages of the low point of view are illustrated in No. 1 of the prints reproduced on the opposite page—"Irene," by Miss G. J. Collins—where the camera, judging from the perspective of the print, was somewhere about the level of the sitter's waist.

Viewpoint and Effect.

The consequence is that too much of the underside of the chin is shown; it is over-emphasised in scale, and there is something of an impression that the model is suffering from mumps! The face seems lop-sided or drawn down on the right-hand side, whereas, if a viewpoint level with the sitter's eyes had been chosen instead, the features would have been shown as they are ordinarily seen and no apparent distortion would have been disclosed.

In other respects the work is good, although, perhaps, the contrasts of light and shade are inclined to be somewhat fierce. The probable cause is that the model was too close to the source of light—a matter which could easily be confirmed and adjusted if the subject be retaken—but, now that the present negative is made, it is possible that a greater harmony of tone might be secured by the substitution of a softer grade of printing paper.

No. 2, "The Dancer," by Arthur Mead, is better in the arrangement of its tonal scheme, but the reason why the light should be shown to take its greatest effect on the trunk of the figure instead of the head is obscure, and the viewpoint, again, is too low, being somewhere about the level of the model's waist.

In the case of a full-length figure, there is more latitude than with a head and shoulders, no doubt, but this goes a bit too far and the presentment loses in naturalness in consequence.

Exceptions and the Rule.

One of those cases which prove an exception to the rule is to be seen in No. 3, "Primroses," by Frank Price. Here, the viewpoint is below the normal level, but is justified by the fact that the subject is looking downwards.

The low viewpoint in conjunction with the inclination of the head brings the plane of the latter to the same relationship with the line of sight as would have been the case if the head had been upright and the point of view at the normal level. It is an excellent bit of work—perhaps a little over-printed—but, apart from that, it is as good as any on the page. There is, however, somewhat of a sense of restriction arising from the close proximity of the top of the head to the top margin of the picture, and the truncation of the foot at the base, a slight defect that could be corrected by the addition of a quarter of an inch all round. A similar sense of restraint exists in No. 4, "A Quiet Read," by H. D. Griffiths, where a like addition would be equally beneficial.

The point of view is on the low side, but not to an excessive extent. It would be wise, however, to subdue the bright light of the chair cover in the rear, and the head would be shown to better effect if it were placed at a greater distance from the edge of the mantel, as has been done with the subject below—"Fireside Study" (No. 7), by H. F. Wilson—which has an advantage in that it scarcely conveys the same idea of restriction.

Space and the Subject.

The light coming from the fire forms a rather disturbing note and should be toned down a bit by local retouching. A further drawback is also disclosed in the lack of sharpness in the image throughout.

Equally good spacing is shown by No. 8, "An Indoor Portrait," by A. Halaham, but the rendering is spoilt by the splashes of light which have been allowed to fall on the hands and legs as well as on part of the setting. These bits of light create a source of attraction which pulls away from the interest that should rest with the head.

In comparison, No. 5, "Miss Mischief," by Joseph Maries, seems very confined, and, though the rest of the work is first-rate in its class, the restriction is a severe drawback that the excellence in other respects is unable to overcome. Nor is there any fault to be found with the level of the viewpoint, and the placing of the head leaves nothing to be desired, so that, on the whole, the lack of space in the setting seems a regrettable oversight.

Lighting and Modelling.

The lighting has been well managed, and, in consequence, the modelling of the features is beautifully shown. In this, the print compares very favourably with Nos. 6 and 9, "Miniature Camera Portrait," by H. J. Nott, and "Iris," by N. G. Spark, for, in both cases, there is a loss of modelling on account of the light being insufficiently diffused and too frontal in source.

In the first case, the height of the viewpoint in conjunction with the angle at which the face is seen causes the chin to appear excessively pointed, and, in the second, the backward tilt of the head should have been met with a corresponding increase in the height from which it was viewed.

"MENTOR."

With the Beginners

NOTES AND NOTIONS FOR THE LESS ADVANCED WORKER

Every week an article will appear under this heading dealing with a topic of interest to the novice in photography.

SUBJECTS WITH REFLECTIONS.

BY whatever means we try to make "pictures" we are bound to be attracted and interested at times by reflections, and in many subjects they play a very important part indeed. In fact the subject of many pictures is nothing but reflections, or very little else.

The novice who tries to paint pictures without reference to nature generally comes to grief very badly when attempting to render water. He generally paints the sea as some sort of green, and a pond as some sort of blue, and wonders why the result does not look "natural." He might just as well paint a mirror in a room just one simple colour. The sea sometimes has a prevailing green tone, and a pond may or may not have blue in its colouring. But in the case of all water the colours and tones depend mainly on what the surface of the water is reflecting.

The novice in photography is often beguiled into photographing a subject simply because the reflections in still water are so perfect a repetition of the objects reflected. He would not be so likely to photograph a mirror indoors for the same reason, although the reflections would almost certainly be a still more perfect replica of the objects.

In a general way it may be said that in outdoor subjects the more perfect the reflections the less satisfactory is the result from the pictorial point of view. Repetition in a modified form is a valuable aid to picture-making; but if the repetition is too exact it brings about too equal a competition of interest. Of the objects repeated, one must have a stronger interest than any other. The photograph that can be hung upside-down without the fact being noticed may be interesting as a somewhat unusual state of things, but it is not satisfactory pictorially.

Fig. 1.

Fig. 1 is not a good (or bad) example of this sort of thing, but it illustrates both sides of the question. The glaring white posts are no acquisition anyhow, but they are made worse by being elongated and emphasised by their reflections. Also the bit of white wall and its reflection combine to form a symmetrical figure which is by no means pleasing. On the other hand the vague repetition of the gable end of the house and the trees beyond is not unpleasing; there is repetition, but no equal competition of interest.

Similarly Fig. 2 is better than it would have been had the surface of the water been smooth and unbroken like that of a mirror. The reflected buildings and so on would have been sharper and clearer, but there is much more variety and interest in the surface of the pond as it is. There are ripples formed by the wind and by the movement of the ducks, the high-lights being reflected light from the sky. There is nothing particularly "pictorial" about it, but the general effect of the record is natural, realistic, and to that extent pleasing. It cannot be viewed upside-down without showing clearly enough which are the actual

Fig. 2.

objects and which are their reflections.

In Fig. 3 again the surface of the water is so disturbed that mirror-like reflections are out of the question. There are not five birds standing on their feet, and five other birds standing on their heads, but we are in no doubt that the five real birds are standing in water, and not on land. In any picture we recognise water by what it reflects, and we judge the state of its surface by the character of the reflections.

We can all recall scores of photographs in which more or less broken reflections in water are the most interesting feature. A sort of oily surface with slight swell gives very wonderful effects, and so does a rippled surface which translates even straight lines into "wiggles." Long before the days of photography artists had observed and studied these ever-changing forms so exactly that they reproduced them with extraordinary fidelity. In our case the lens does it all for us in a swift flash of light.

It will pay us to watch for reflections when looking for subjects. They are common enough, for we find them not only in large bodies of water, but in puddles and wet ruts, on ice, on wet roads and streets, and on any surface with more or less reflective powers. We shall not have to study reflections long without learning to avoid the common blunder of calling them "shadows."

W. L. F. W.

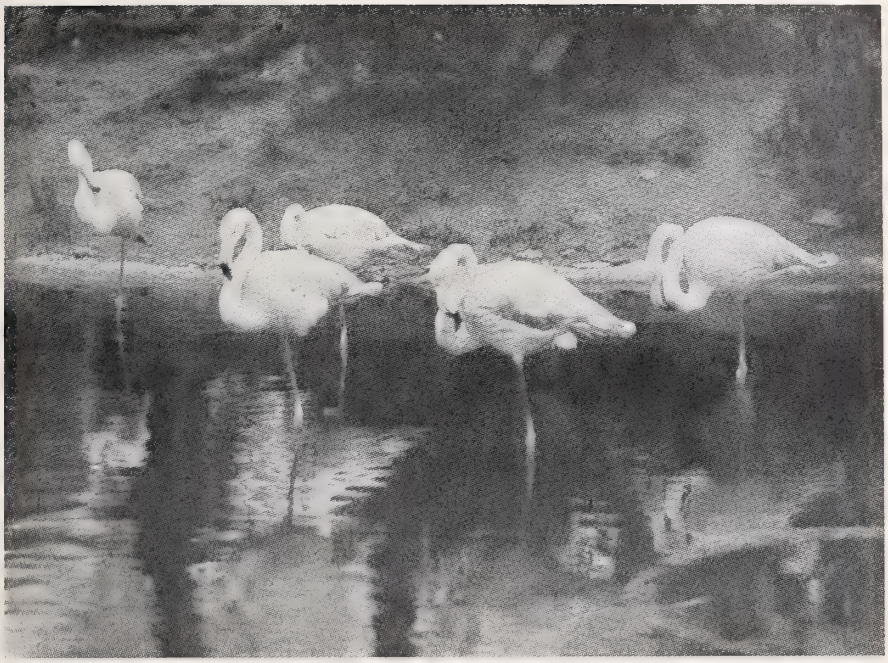

Fig. 3.

Awards in our Second Annual Novices' Competition

AS indicated in a recent issue, this competition again attracted an enormous number of entries, and demonstrated the keenness of our readers who are still in the beginner stage.

Subjects of every kind and sort were depicted, although, needless to say, the summer holiday snapshot was in the majority. We were glad to note, too, that a very great number were obviously the photographer's own work, and in most cases these were of a better type than those produced (also obviously) by D. & P. firms.

The entries were restricted to contact prints, and this, in view of the present "miniature" fashion in cameras, resulted in some thousands of prints of postage stamp size, or thereabouts. These were run very close in point of numbers by prints of 4.5 × 6 cm. size, evidently made with cameras taking 16-on-2¼ × 3¼ 8-exposure roll films.

All these, however, have been carefully scrutinised, and some of these tiny efforts proved to be little gems. The bulk of the entries were, however, 2¼ × 3¼ or 2¼ square, with a large number of quarter-plate and postcard size prints—showing that many cameras of these sizes are still in commission and doing good work in the hands of novices.

The general standard of the prints as a whole was surprisingly good, particularly on the technical side, while pictorially there is no doubt that this collection of workers includes many first-rate exhibitors for the future.

The awards are as follows:—

First Prize (two roll films every week for one year).—"Harvest End." M. H. Disney, Little House, Redden Court Road, Harold Wood, Essex.

Second Prize (two roll films every week for six months).—"Lindy in the Bath." G. F. Eales, 126, Uxbridge Road, West Ealing, W.13.

Third Prize (one roll film every week for six months).—"Sentinel." S. R. Gee, 9, The Octagon, Willerby, E. Yorks.

Twelve Prizes of one roll film every week for three months.—"Great Expectations." W. A. Chivers, Army W/T Station, Mustapha Barracks, Sidi Gaber, Alexandria, Egypt.

"Shadows." F. Ward, S. Lower Granton Road, Edinburgh.

"Safe Home." Joyce M. Tyrrell, Kirkland Lake Gold Mines, Kirkland Lake, Ontario, Canada.

"The Pillion Rider." Norman Ward, 5, Moreton Avenue, Sale, Ches.

"The Blow Hard." Mrs. M. Boast, G.I.P. Rly., Amla C.P., Betul Distt., India.

"The Wee Sweetie Shop," David Hodghton, 106, Turret Road, Glasgow, W.3.

"Self-Portrait." R. Such, 139, Oxford Road, Smethwick, Staffs.

"Prince." John Pollard, 22, Corporation Street, Darwen.

"Care Free." L. T. Green, 295, Watford Way, Hendon, N.W.4.

"In the Garden." H. S. Holden, Ingle Nook, Alexandra Road, Abergele, N. Wales.

"Up with the Sun." Mrs. L. Gadd, 73, Lyttelton Avenue, Blackheath, Birmingham.

"Midday Rest." T. H. Messenger, 47, Albion Road, Sutton.

The following prints ran the winners very closely:—

"Treasures," A. N. Thomas (London, S.W.); "The Lady of the Lake," Miss L. Nienhaus (London, S.E.); "Distant Views," W. A. Headley (N. Wales); "Gossip," Miss M. S. Blundell (Porthcawl); "England's Switzerland," S. Barratt (Mansfield); "Angler's Corner," F. Ward (Edinburgh); "Nature's Patchwork," W. H. Perkinton (Sheffield); "A Bit of Old Edinburgh," F. Ward (Edinburgh); "Doggie's House," Dr. H. M. Thompson (W. Kirby); "The Newcomer," F. J. Palmer (Margate); "Anybody Looking?" Dr. H. M. Thompson (W. Kirby); "Whitsunday," E. L. Green-Armytage (Bath); "A Cornish Valley," M. H. Disney (Harold Wood); "Summit View," R. V. Husted (Slough); "The Lonely Station," E. F. Alldritt (Glasgow); "Storm Cloud," Mrs. M. Boast (India); "Polperro Reflections," W. Glyn Evans (W. Ealing); "Morning Glory," R. C. Tough (India); "Minehead," H. Peath (Birmingham); "Baker at Work," B. Hercock (Dunstable); "Milking Time," G. NEWS AND REVIEWS

ITEMS OF GENERAL INTEREST FROM ALL QUARTERS.

Zeiss Ikon Ltd. have asked us to draw the attention of amateur photographers to the fact that now, during the slack season of the year, is the time for sending in repairs rather than in the busy season, and then often only a day or two before the instruments are wanted for use. Not only is it more convenient for the manufacturer, but the customer also gets a better job, since much more attention can be given to repairs during the slack season than is the case in the busy months of the summer.

R. F. Hunter Ltd., of "Celfix House," 51, Gray's Inn Road, W.C.1, have sent us a new Rolleiflex/Rolleicord prospectus. This contains several admirable illustrations in photogravure, and a lot of information regarding these two popular cameras. A copy will be sent free on application to the above address.

The Aston Photographic Society is worthy of the attention of all amateur photographers living in that district of Birmingham who desire to join a live association. The Society was started in 1892, and the usual meetings have been held at the Burlington Hall without a break since that date. The membership includes a number of enthusiastic workers of both sexes, and all photographers who care to visit the Thursday evening meetings are welcome. Anyone interested will receive an invitation and a programme by writing to the Secretary, Mrs. D. Gregory, 79, Lindridge Road, Erdington, Birmingham.

Messrs. M. W. Dunscombe, Ltd., of 5, St. Augustine's Parade, Bristol, who are United Kingdom agents for "Ampro" products, advise us that the present retail prices of "Ampro" projectors are as follows: Model "JS," 500-watt, silent, £42 10s.; Model "KS," 750-watt, silent, £50; New Convertible Silent-to-Sound "N/C," 750-watt model, £60; Model "M" Amprosound, £115 10s.; Model "N" Amprosound, £127 10s.

The "Electrodrem" exposure meter, which has recently been put on the market, consists of a light-sensitive cell and indicating meter in a bakelite case, to which is attached, in the form of a handle, a cylindrical calculator. The cell window is covered by a flap which, when raised, acts as a sky-shade. Graduations on the dial take the form of letters, and if the calculator is pre-set for the speed of film in use there will be found on it under the letter at which the indicating needle stops a column giving exposures at all apertures from f/2 to f/22. Provision is made for the use of the meter by artificial light, when it indicates the very different exposures needed for panchromatic and orthochromatic films. The cost of the meter is £4, inclusive of a leather case, very sensibly fitted with a loop by which it can be attached to the shoulder-strap of the camera case. The meter is quite small; in its case it measures $3\frac{1}{8} \times 2\frac{3}{8} \times 1\frac{1}{2}$ in. over-all. The meter is obtainable from Drem Products, Ltd., 37, Bedford Street, London.

The Lincoln Camera Club invites visitors to its forthcoming lantern lecture on "Miniature Negative Photography," to be given by Mr. L. J. Parmiter, of Messrs. Leitz Ltd., in the Lecture Hall of the Lincoln Technical College on Friday, December 18th, at 8 p.m. Further details of the lecture can be obtained from Mr. G. F. Shepherd, c/o Messrs. E. R. Dixon, 194, High Street, Lincoln, while readers interested in the club are invited to write to Mr. R. David Harris, Haydnholme, Sudbrooke, Lincoln.

"Ensign Photo Gadgets" is the title of an attractive little list of accessories for the amateur photographer, just issued by Ensign, Ltd., of Ensign House, 88–89, High Holborn, W.C.1. Every reader should get a copy of this list, which is very fully illustrated, as it contains particulars of dozens of just those little items needed to make the outfit complete. It is particularly appropriate at this present-giving time of year, and a postcard to the above address will bring it by return.

A miniature camera taking 36 exposures on 35-mm. film, and selling at £13 5s. with f/2.9 lens, has been introduced by the Norse Trading Co., Ltd., 37, Rathbone Street, W.1. This is the "Super Baldina," and it is a most attractive little instrument. Standard daylight-loading cassettes can be used with it, and it has an automatic exposure counter that locks after every exposure. A range-finder is built in and coupled with the focussing adjustment, and a novel and ingenious fitting is a built-in tubular view-finder with parallax compensation. The correct view is ensured at all distances by means of an automatic tilting device operated by the focussing movement. The lens is a Meyer Trioplan in Compur shutter, but a Zeiss Tessar f/2.8 or Schneider Xenon f/2 can be supplied at increased prices. A further reference to this camera will be made after we have had an opportunity of testing it.

Those who read German will find in "Das Photo-Jahr" (Wilhelm Knapp, Halle, Saale, Germany, price R.M. 1.98) an interesting and useful little volume. It contains a calendar with daily space for notes, each month being faced with an article or illustration suited to the season. There are forty pages of articles on "This and That," twenty pages of useful tables, and a brief review of novelties in apparatus, etc.

The latest winner of the Wallace Heaton Competition is Mr. Ivan H. English, of 8, Goddard Avenue, Swindon. Full particulars regarding this competition for readers of "The A.P." appear regularly in our advertisement columns.

FACTS and FORMULÆ

ONE or more items of practical value to the amateur photographer are given under this heading in every issue. They are printed in either the vertical or horizontal form as shown here, and each is complete in itself.

These facts and formulæ are intended to be cut out and pasted on the thin cards of the standard size, 5×3, supplied for card index cabinets.

The collection, when completed, will form a concise guide to photographic practice that every regular worker will value for reference, and for that reason no copies should be missed.

"A.P." filing cabinets have been specially prepared for this card index and are now ready. The size of the box is $5\frac{1}{2} \times 3\frac{1}{2} \times 3$ and each is supplied complete with a set of alphabetical index cards and 150 cards for pasting on the "Facts and Formulæ." They are obtainable from our publishers, Messrs. Iliffe & Sons Ltd., Dorset House, Stamford Street, London, S.E.1. Price 2s. 6d. post free.

54. QUICK DRYING OF PRINTS

IN "Facts and Formulæ" No. 26, the quick drying of negatives, both on glass and film, was dealt with, but the necessity for rapid drying of prints arises also in the practice of press photography and other rush work, when finished results are wanted in a minimum amount of time.

In press work the drying of the negative is not always important, as it is possible, at times, to make prints by enlargement from wet negatives. The negatives are quickly rinsed after fixing and more thoroughly dealt with after the prints are made.

Being able to produce prints very soon after an exposure has been made also has advantages when the amateur is "operating" at a party or other function.

As mentioned in the previous formula, the use of methylated spirit is the best method for drying negatives, but with prints, as the paper itself absorbs water, two or more baths of spirit will be necessary if ordinary drying methods are adopted. For most purposes, if the print after each bath of spirit is held in front of a fire, the warmth will dry the print very quickly.

A more drastic method is, after blotting the print and soaking it for two or three minutes in methylated spirit, to hold it suspended by one corner with a wire clip and set fire to it. The spirit will burn off rapidly and at the same time dry the print. This method is adopted regularly by press photographers.

If a great number of prints are prepared by the spirit-drying method the spirit becomes charged with water after a time. This can be renewed by collecting it in a large bottle and adding dry potassium carbonate, about 2 or 3 oz. to the pint. Shake the mixture occasionally and it will be found that the water will be absorbed by the carbonate and collect at the bottom of the bottle as a heavy liquid. The renewed spirit can then be poured off and used again.

The formalin method can also be applied to prints. In this case the print, after washing, is passed through a bath of 10 per cent formalin, given a final wash in hot water, and dried rapidly in front of a hot fire, or even placed between blotters and ironed with a hot iron, which will dry it quickly and keep the print flat.

The alternative is to squeegee the print after a formalin or alum bath on to ferrotype plate, which is then placed in front of a hot fire. In this case the print will dry rapidly and peel off with a good glaze.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

Amateur Cinematography

NEWS, NOTES AND MATTERS OF INTEREST FOR ALL CINEMATOGRAPHERS USING AMATEUR CINÉ APPARATUS.

Christmas and the Home Cinema

By "ACTINOGRAPHIST."

CHRISTMAS is an important time for the amateur photographer. It denotes a busy period of activity devoted to a congenial task; it means ample opportunity for seeing that favourite film again; above all, it provides scope for placing recent work before much larger audiences than the home circle is wont to muster in normal times.

Some of these visitors are, indeed, eagerly looking forward to the Christmas ciné shows. Others are by nature sceptical—even to the point of remarking that they do not, *of course*, expect to see anything like they put on at the Splendora-Super.

It behoves us now to see that those looking forward to the shows are not disappointed; and, as regards the others—well, maybe it will be possible to convince them that numerous good films exist outside the programmes of the local movie palace. . . .

For at least in the field of subject matter, amateurs are developing far more interestedly than the professional "mixture as before" experts.

Films.

Both private and commercial productions can be included in the majority of Christmas programmes.

Dealing first with private films, it is obviously an adventure to include any good productions from the worker's own camera or towards the making of which he may have contributed. Mediocre or rubbishy subjects should be entirely omitted from the programmes—it being found far better in actual practice to give a brief show of first-class material than to draw out a display with unimpressive reels.

From the host of commercial titles which are available for showing on non-flam, reduced-gauge stock, only the best of tried productions should be selected. Many of the shorter subjects represent cinematography at a particularly high standard, and—paradoxically enough—many of them are available at the lowest rates for hiring!

Equipment.

Before the day of the first show comes round, steps should be taken to ensure that the equipment is specially overhauled in readiness for any unusual activity. Certainly, the film gate and entire optical system should receive careful attention.

At the conclusion of these tasks, no oil of any kind should be left remaining on exposed surfaces of the projector—nor should the spare parts be passed without actually testing the stand-by duplicate lamp.

The screen itself is very important in any full-dress show, hence some attention may with advantage be bestowed upon this important accessory. A soft duster should first of all be used (upon any kind of screen); following this, a "Sorbo" rubber is splendid for silver and crystal screens, sponge and warm water being recommended instead for the white, washable curtains.

Comfort.

Much of the success of any show will again depend upon the degree of comfort which accompanies its production. Warmth and cosiness are, of course, details for special consideration—matters like seating and accommodation being somewhat ordered by the furnishings, etc., available.

In any case, only the most comfortable chairs and settees should be reserved for the show, and these should be carefully arranged about the axis of projection; failing this precaution, there will be some risk of dull pictures to those sitting on the extreme boundaries of the arrangement. And, needless to say, chairs with high seating should be placed well to the rear of the room selected for the display.

Finally, safety as well as comfort becomes a contributory factor in the full enjoyment of all home cinema exhibitions. With modern equipment, there is very little risk of electric shocks or explosive arcs, yet very real danger can be brought about through the carelessness of operators. Such danger is almost entirely concerned with the trailing of loose leads about the seating and the machine itself. Just a little preliminary care in hiding the flex cables beneath the carpet will effectively prevent any of the things that might happen through only one false step in the dark.

For the rest, it is advisable not to meddle with satisfactory leads and connections. Where such have to be cleaned or repaired, proper replacement and adequate insulation alone can ensure freedom from subsequent faults and undue embarrassment.

Cold weather visitors. Good action pictures as suggested above are now obtainable in Hyde Park and many other open spaces in London. The gulls have been driven inland in great numbers by the cold weather.

Letters to the Editor

The Editor is not responsible for the opinions of his correspondents.

THE "OPTOCHROM" TANK.

SIR,—As a user of the "Optochrom" tank I found no difficulty in separating, by a firm, even pull, the entire backing paper from the end of the film, so long as the film was attached to the backing by a *paper* strip. It is the substitution of a *linen* strip attachment, by at least one of the leading film-makers, which creates the difficulty. The only course with such films is to cut the backing paper off close up to the slot. Otherwise, I have proved the tank to work perfectly and to give excellent negatives.—Yours, etc., CHAS. M. DRAPER.

WHAT IS A MINIATURE CAMERA?

SIR,—Why all this confusion about "What is a miniature camera?"? Your correspondents seem to deal with anything but the precise object, i.e., the camera.

A "miniature" should have a normal short-focus lens, and also a small picture area, but surely the essential thing is that the instrument itself must be of small size *when in use*.

A normal-focus lens would presumably be equal in length to the diagonal of the sensitive medium available for one exposure, possibly five square inches.

My dictionary defines miniature as "a small or reduced copy of anything," and this appears to include the small roll-film reflexes up to 6×6 cm.

Admittedly this lets in the possibility of a miniature stereo camera of comparatively large bulk, yet this could be a reduced copy of a standard class. So I think the definition still stands. —Yours, etc., A. W. FOSTER.

TRANSFEROTYPE PAPER.

SIR,—Referring to the query by "W. S." I have used a good deal of this on glass and only occasionally had trouble. I feel sure that his difficulty is due to one of two causes—either the water has been too hot, or possibly the glass, though coated, has been fingered on the surface. I have never been to the trouble of coating it and have had few failures.

He should be told that a translucent celluloid can be got from Messrs. Kodak, with one side matt, on which the transfer is much more easily made. I have never spoiled a sheet with this, and backed up with two thin glasses in the enlarger to keep it flat he will have no trouble.—Yours, etc., A. E. F.

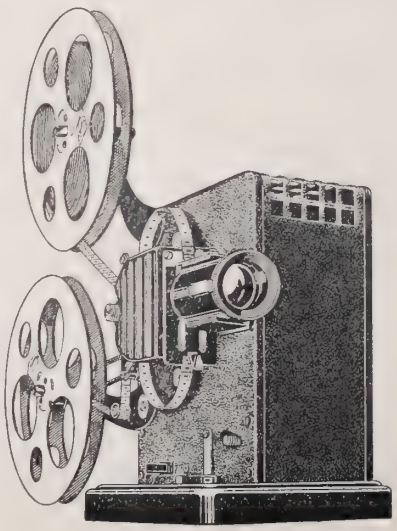
12-EXPOSURE FILMS FOR LEICA.

SIR,—I was greatly interested in Mr. Sowerby's letter on twelve-exposure films for the Leica.

Personally, I postponed buying a Leica camera for over two years, solely on account of the thirty-six exposures necessary, and now that I have bought one I find this the one and only drawback. I know many of my friends who would definitely buy these cameras if a twelve-exposure film could be obtained. Surely the manufacturers of such an ingenious piece of mechanism can devise a twelve-exposure film that will not be too prohibitive in price. They would sell thousands more cameras.—Yours, etc., C. HOLT.

SIR,—The recent suggestion by Mr. R. J. Hoblyn that twelve-exposure cassettes should be marketed for Leica and other cameras using the same film is, I think, one that would meet with the support of practically every user of cameras of this type. It is to my mind the one drawback to the Leica that one has to wait so long to finish a roll, with the result that one's friends are constantly asking when they may expect to see the pictures, and by the time they do, interest has evaporated.

The question of supplying a cassette for a short roll of film obviously means increased cost, unless the present system of regarding a cassette as "scrap" is abandoned. I suggest it would be far more satisfactory if cassettes were better made (some of those at present on the market are very unsatisfactory), and the purchaser would then make a regular thing of returning cassettes for refilling with a further twelve-exposure quantity of film. One would naturally pay a deposit on the first cassette, or whatever number of cassettes one got in the first place, after which they would continue to circulate in very much the same way as soda-water siphons.—Yours, etc., T. D. WYNN WESTON.



POTS AND PANS.

SIR,—Once again we have a photograph on your centre Art pages of pots and pans. Nothing annoys me more, and I know of others also, than these "pictures" of tins and basins and "washing-up." Is the world so devoid of subjects that we have to descend to this rubbish? I am saying nothing about the technique, which may be excellent, but a person must be devoid of any imagination if he can think of no better subject than collections of junk of this type.

What a contrast is the study on the page opposite, "In Quiet Waters." It is unfortunate for the "pot and pan" merchant that it came on the opposite page. The contrast is so striking that it makes his effort look doubly depressing and morbid. It is time old iron and dirty crockery went out of fashion as subjects for photography.—Yours, etc., J. BRIMBLE.

The "Eumig" Projector

A NEW projector, the "Eumig" P.III, sold by Actina, Ltd., of 29, Red Lion Square, London, W.C.1, is now available in three models for 8, 9.5 and 16 mm. film respectively. The light source is a 250-watt lamp run direct from the mains, and fitted with a pre-focus cap. An adjustment is fitted to enable accurate centring. The film is illuminated indirectly by light from the lamp passing through the condenser on to a mirror and so through the film and lens to the screen. A two-bladed shutter, which makes two revolutions for each frame of the film, and so is equivalent to a four-bladed shutter, interrupts the light by covering and uncovering the mirror. The shape and arrangement of the blades are claimed to be such as to allow the passage of some 25 per cent more light than is passed by the usual shutter. On the pressure of a button the film stops for the projection of stills, titles, etc., but as the shutter continues in action there

is no change in brilliance on the screen. Threading and loading are extremely quick, the film being simply pressed on to the sprockets where it is both located and held automatically by spring guides. Threading the gate is equally simple, it being only necessary to drop the film in and close the gate. On starting the motor the claw engages automatically. In operation the projector is very quiet. The drive from the motor is by belt, and gears and chain sprockets of fibre are used in order to ensure silence. The lens fitted as standard to the 9½-mm. model is the Meyer Kinon 3.5-cm. f/1.6 lens. Lenses of different focal length are interchangeable with the standard lens. Examination of the details of construction of this projector, which will accommodate up to 400 ft. of film at one loading, shows that it has been well planned and carefully made, and the picture that it throws on the screen is both brilliant and flickerless. All further particulars are obtainable from the above address.

The Week's Meetings

Societies will have their meetings announced here if the syllabus is sent to us at the beginning of the session or from time to time.

Wednesday, December 16th.

Battersea Men's Inst. C.C. "Holiday Flashlight Work."
Bethnal Green C.C. Club Meeting. Discussion of Future Plans.
Birkenhead P.A. An Evening with Mr. J. H. Trace.
Birmingham P.S. (Ciné Sec.). Mystery Night.
Borough Poly. P.S. Annual Exhibition.
Brighton and Hove C.C. "Improving the Negative." R. H. Lawton.
Cheltenham C.C. "Bromide Enlargement." G. F. Harris.
Chorley P.S. "Infra-Red Photography." T. Cooper.
Coventry P.C. Chloro-Bromide Papers.
Croydon C.C. "Chat on Transparency Topics." D. S. Rose.
Darwen P.S. Ciné Night. "The White Hell of Pitz Palu."
Dennistoun C.C. "Press Photography." R. M'Leod.
Edinburgh P.S. "To Boston and Hudson Bay on a Tramp." E. D. Young.
Erdington and D.P.S. Inter-Club Visit to Hall Green Photographic Society.
G.E. Mechanics' Inst. P.S. "Thiocarbamide." J. Ainger Hall.
Hall Green P.S. Inter-Club Competition. Hall Green *v.* Erdington P.S.
Hinckley and D.P.S. Lecturettes. Messrs. Beardsmore, Haddock and Powell.
Ilford P.S. "Trees and Tree Photography." R. C. B. Gardner.
L.M.S. (London) P.S. The Double Trios Print Competition.
London School of Hygiene P.S. "Fesagol Developers." L. A. Leigh & Co.
Luton and District C.C. Reception of Exhibition Prints and Slides.
Northallerton and D.P. and C.S. "The A.P." Prize Prints, 1936. R. P. Haw.
Northampton N.H.S. (Phot. Sec.). "Lantern-Slide Making." J. Dickens.
Preston S.S. "Puppets." M. E. Boardman.
South Essex C.C. Members' Night.
S. Suburban and Catford P.S. "The New Kodachrome Process."
Tunbridge Wells A.P.A. Chloro-Bromide Demonstration. A. G. Batting.
York P.S. "With Camera and Rucksack in the Austrian Tirol." F. Watson.

Thursday, December 17th.

Accrington C.C. Night arranged by Mr. H. W. Duxbury.
Ardeer C.C. Isle of Man Photographic Competition, 1936.
Armley and Wortley P.S. "Pictorial Work with an Enlarging Lantern."
Ashton-under-Lyne P.S. Members' Night.
Aston P.S. "Ellan Vannin." Wm. Davies.
Bayswater and Padd. P.S. "Some Masterpieces of Photography." J. D. Johnston.
Bolton C.C. Lecturettes by Members.
Bury P.S. "Home Portraiture."
Camberwell C.C. "Reminiscences." R. C. Leighton Herdson.
Cardiff C.C. Members' Slide Night and Social.
Coatbridge Co-op. C.C. Business Meeting.
Gateshead and D.C.C. Federation Prints.
Hampshire House P.S. Criticism of Lantern-Slide Competition. P. B. Jenkins.
Hull P.S. "The Amateur Photographer" Prize Slides (1936).
Isle of Wight C.C. "Odds and Ends." Dr. H. F. Bassano.
Keighley and D.P.A. Y.P.U. "Wild Life of Meadow and Wood." A. Gilpin.
Kinning Park Co-op. C.C. Annual General Meeting.
Letchworth C.C. "An Evening with Modern Colour Processes." J. Chear.
Loughborough P.S. Dufaycolor Demonstration. Mr. G. H. Sewell.
Newcastle and D.A.C.N. Xmas Party.
N. Middlesex P.S. "The Supremacy of the Lantern Slide." C. E. Lucas.
Oldham Equitable P.S. Committee Meeting. A. Birchenough.
Padiham and D.P.S. Ciné Night. Closing Date "Work or Play Competition."
Singer C.C. "Enlarging." D. C. Murdoch.
Stourbridge Inst. P.S. "Ecclesiastical Architecture." G. F. Palfrey.
Urmston and D.P.S. "Still Life." One-man Show. T. R. Monkhouse.
Walkden and D.P.S. "Artistic Effects with Screens and Enlarger." W. Partington.
Woolwich P.S. "Simple Technique of True Landscape." J. H. Clark.

Friday, December 18th.

Royal Photographic Society. Joint Meeting.
Bethnal Green C.C. Social. Members' Friends welcome.
Colne C.C. "Old Colne." J. T. Whittam.
Harrogate P.S. Competition Evening. S. Bridgen.
Ilkeston Arts Club. Demonstration—Portraiture.
Leigh Lit. Society. L. and C.P.U. Prints.
Photomicrographic Society. Members' Evening.
Southend-on-Sea and D.P.S. Members' Evening.
Southport P.S. "The Amateur Photographer" Prize Slides, 1935.
Wimbledon Ciné C. "Kodachrome." Messrs. Kodak Ltd.

Saturday, December 19th.

Royal Photographic Society. "The Story of the Cartoon Film." E. Anson Dyer.
Greenock C.C. "Trimming and Mounting." Jas. Swan.
Hackney P.S. Outing: Whipps Cross.
Hampshire House P.S. Criticism of Members' Monthly Competition. H. Felton.
Leamington and D.P.S. "The Gower." Mr. G. W. Bott.

Monday, December 21st.

Ashington and Hirst P.C. Chairman's Evening.
Blackburn and D.P.S. Annual Supper, etc.
Bournemouth C.C. Monthly Print Competition.
Bradford P.S. "Child Photography." Rev. J. W. Haswell.
City of London and Cripplegate P.S. "London Docks." K. Baker.
Darlington C.C. Portfolio of Prize-winning Prints.
Erdington and D.P.S. Christmas Whist Party.
Glasgow and W. of S. P.A. "Finishing the Exhibition Print." T. Carlisle.
Kingston C.C. "On Safari in East Africa." F. L. Talfourd Paget.
L.C.C. Staff C.C. "Combination Enlarging." W. E. Ginger.
Leeds C.C. "The Amateur Photographer" Prize Slides (1936).
Long Eaton and D.C.C. Members' Night. Mounting of Prints.
Maidstone and D.P.S. Christmas Vacation.
Newcastle (Staffs) and D.C.C. "A Beginner at Bromoil." E. B. Marks.
Oldham Equitable P.S. Lecture. J. Brufton.
Preston C.C. Open.
Shropshire P.S. "Portraiture." Dorothy Wilding.
S. London P.S. Lantern Slides by Members of the Lantern Slide Postal Club.

Tuesday, December 22nd.

Royal Photographic Society. Scientific and Technical Photography.
Ayr Amateur P.S. Social Evening in Lecture Room.
Bedford C.C. "Making the Exhibition Print." S. R. Bridgen.
Bury P.S. Open Meeting.
Dunfermline P.A. Christmas Social.
Hackney P.S. Fireside Chat.
Leeds P.S. Exhibition of the Yorkshire Photographic Union.
Leicester and Leicestershire P.S. "Straight Print" Competition.
Manchester A.P.S. Night Photography, by the Members.
Monkland P.S. G.D.U. Portfolio.
Morecambe, Heysham and D.P.S. Ciné Night.
Portsmouth Camera and Ciné C. "Tank Development of Roll Films." H. Eccles.
Small Heath P.S. Competition. "Portraiture." H. S. Rowley.
St. Bride P.S. Social Mystery Evening.
Stockport P.S. "Beautiful Manxland."
Stockton-on-Tees and D.C.C. "Filters." J. Nightingale.

Wednesday, December 23rd.

Chorley P.S. "Why I Like My Camera." Members.
Coventry P.C. "The Amateur Photographer" Prize Slides, 1935.
Croydon C.C. Season's Outings Print and Transparencies Competition.
Phœnix C.C. Exhibition Opens.

Exhibitions and Competitions

CURRENT AND FUTURE.

The Amateur Photographer Monthly Competitions for Beginners, Intermediate and Advanced Workers.—Entries, December 31. Rules in the issue of Nov. 25.

Wallace Heaton Special Competitions. Cash prizes every week.—Open to readers of *The Amateur Photographer*. Full particulars in advertisement page in this issue.

Salion International de Fotografica de Madrid. (Señor Secretario de la Sociedad Fotografica de Madrid. Calle del Principe, 16, Madrid.)

U.P. International Exhibition of Photography, 1936 (Lucknow).—Open, December 5, 1936–February 4, 1937. (Dr. K. N. Mathur, D.Sc., Hon. Sec., U.P. Amateur Photographic Association, Lucknow University, Lucknow.)

Royal Photographic Society Sub-standard Film Competition during December. (J. F. Marshall, Hon. Sec., Kiné Group, R.P.S., 35, Russell Square, London, W.C.1.)

Tenth International Christmas Salon of Pictorial Photography (Antwerp).—Open, December 20, 1936–January 3, 1937. (J. Van Dyck, Sec., Fotographische Kring "Iris," Ballaestr., 69, Antwerp.)

Camera Club Members' Exhibition, 1936.—Open November 25–December 18. (The Secretary, The Camera Club, 17, John Street, Adelphi, London, W.C.2.)

Fourth (Third International) Wilmington Salon of Photography.—Open, January 18–31. (Secretary, Delaware Camera Club, P.O. Box 818, Wilmington, Delaware, U.S.A.)

Fourth Scottish Amateur Film Festival, Final Adjudication and Public Show, February 20; entries, December 31. (Ian S. Ross, 80, Buchanan Street, Glasgow, C.1.) Cash prizes.

Preston Scientific Society Twelfth Annual Open P.S.—Entries, January 8; open, February 1–13. (E. Eastham, 130b, Church Street, Preston, Lancs.)

S. London P.S. 41st Annual Exhibition.—Entries, January 18; open, February 13–March 13. (H. S. Adams, 40, Stockwell Park Road, S.W.9.)

Leicester and Leicestershire P.S. International Exhibition.—Open February 22–March 14, 1937. (H. Foscutt, 19, Doncaster Road, Leicester.)

29th Scottish National Salon.—Entries, January 23; open, commencing February 20. (John J. Robertson, Hon. Sec., Scottish National Salon, Art Gallery and Museum, Perth.)

Ilford P.S. International Exhibition.—Entries, January 30; open, March 1–6. (Exhibition Secretaries, c/o 61, Castleton Road, Goodmayes, Essex.)

IVe Salon International Albert Ier.—Open, March 2–16; entries, January 31. (M. Roger Populaire, 18, rue de l'Egalité, Charleroi, Belgium.)

Western Eighth Annual Salon of International Photography.—Entries, February 1; open, February 20–27 (Russell Town Studio). Also at the Dorothy Café, Esplanade, Weymouth, from March 8–13. (W. H. Hill-Muchamore, 24, Church Road, Redfield, Bristol.)

Runcorn C.C. North-West Cheshire Salon of Photography.—Entries, February 6; open, March 10–13. (R. J. Edwards, 1, Waterloo Road, Runcorn, Cheshire.)

Birmingham P.S. 46th Annual Exhibition.—Entries, February 6; open, February 27–March 13. (E. H. Bellamy, Waterloo House, 20, Waterloo Street, Birmingham, 2.)

City of London and Cripplegate P.S. Thirty-second Annual Photographic Exhibition.—Entries, Monday, February 8; open, March 8–13, 1937. (R. C. Dye, Reservoir View, New Mill, Tring, Herts.)

Hackney P.S. 48th Annual Exhibition.—Forms due, February 9; exhibits, March 1; open, March 3–6. (W. Selfe, 24, Pembury Road, Clapton, E.5.)

L.M.S. (London) P.S. Twelfth Annual Exhibition, open to Great Britain and Northern Ireland.—Entries, February 12. (Clarence Pursell, Chief Accountant's Office, L.M.S. Rly Co., Euston Station, London, N.W.1.)

Birkenhead Photographic Association Y.M.C.A. Annual Exhibition.—Entries, February 17; open, March 9–13. (R. Greenwood, Four Chimneys, Irby, Frankby, Cheshire.)

St. Petersburg C.C. Second Annual Pictorial Salon of Photography.—Entries, February 26; open, March 3–17. (R. Kendal Williams, 602, Snell Building, St. Petersburg, Florida, U.S.A.)

Edinburgh P.S. 75th Annual Open Exhibition.—Entries, March 1; open, March 20–April 3. (John S. Rodger, 16, Royal Terrace, Edinburgh.)

Brighton and Hove C.C. International Exhibition of Pictorial Photography.—Entries, March 15; open, April 14–May 1. (E. K. Robins, Little Toll, Isfield, Uckfield, Sussex.)

Bristol P.S. Third Annual Open Exhibition.—Entries, March 31; open, May 1–29, at Bristol Art Gallery. (F. E. Haynes, 50a, Belvoir Road, St. Andrews Park, Bristol, 6.)

Eighth International Salon of Photographic Art (Brussels).—Open daily (except Fridays) from April 3–18. (M. Devaivre, 152, rue Markelbach, Brussels, 3, Belgium.)

Readers' Questions ANSWERED

GENERAL.—All communications for the Editor should be addressed: "The Editor, *The Amateur Photographer and Cinematographer*, Dorset House, Stamford Street, London, S.E.1," and in every case, without exception, must give the name and address of the writer.

CONTRIBUTIONS.—The Editor is glad to consider original, up-to-date manuscripts on photographic subjects. All contributions must be typewritten, or in very legible handwriting on one side of the paper only. Letters or communications arising out of matters already appearing in the paper are not paid for. The Editor disclaims legal responsibility for the safety of matter submitted to him, but he will endeavour to return rejected manuscripts, etc., when a stamped addressed envelope is enclosed. MSS. or prints that are not actually accompanied by a stamped wrapper or envelope can in no case be returned. Reproduction fees for prints are only paid by arrangement beforehand. The sending of a print, without any condition stated, will be taken as permission to reproduce it without fee.

ENQUIRIES AND CRITICISM.—Advice, Criticism and Information are freely given, but the following conditions should be read carefully before applying, as any communication which does not comply with the rules must be ignored.

(1) See "General" above. (2) Every question and every print for criticism must be sent separately through the post, and must be accompanied by a *separate* stamped addressed envelope. No exception can be made in any case to this rule, except so far as enquiries or prints from Overseas are concerned. (3) Neither enquiries nor prints for criticism must be enclosed with competition prints. (4) On the back of each print sent for criticism, in addition to the name and address of the sender, must be the title (if any), and the criticism coupon from the current issue. (5) Enquiries should be clearly written, on one side of the paper only, and should be specific and not general. Such enquiries as "How can I take interiors?" or "Can you give me some hints on outdoor portraiture?" are too general to be dealt with in this section. (6) All envelopes should be distinctly marked "Query" or "Criticism," as the case may be. (7) Prints are sent for advice or criticism on the distinct understanding that by so doing permission is given for their reproduction without fee. We endeavour to deal promptly with enquiries, but cannot undertake to answer by return of post, nor can we give precedence to any enquiry.

A selection of those replies is printed each week, but all questions are answered by post. Enquiries from abroad must contain a coupon also, but it need not be from the current number, and should be cut from the latest issue to reach the enquirer.

Mounting Thick Paper.

I have recently taken to making my enlargements on a paper only obtainable in double-weight, and I find difficulty in mounting them without causing cockling. What do you recommend?
H. F. (Devon.)

The best method of mounting is undoubtedly dry mounting, using a press. Failing this, you will find an ordinary domestic iron quite satisfactory after a little practice. For mounting in an album, paste is usually more convenient. Have you tried running a very narrow line of paste, not more than about one-eighth of an inch wide, round the edge of the print? This holds it firmly without causing the expansion of the paper which is the cause of cockling.

Developer for Bromide Prints.

I have been told that it is essential to use for bromide paper the exact developer prescribed by the makers. But I have also been told—obviously by another adviser—that bromide paper is so "good-natured" that it can quite successfully be developed in almost any reasonable developer. Which of these counsels—if either—am I to believe? P. F. (Northampton.)

Both pieces of advice have at least a germ of truth in them, but both are rather exaggerated. Anything that will develop at all will certainly give an image of sorts on bromide paper, but an ill-balanced developer may fog or stain. In a less bad case the tone may be brownish or greenish instead of being a good clean black.

We ourselves would always use the maker's formula if there were no reason to the contrary; on the other hand, we should not hesitate to depart from it if it were convenient to do so. Suppose it was desired to use two makes of paper for the sake of increasing the total contrast range available in the different grades; we should then suggest using for both a developer made up to a formula which was a compromise between the two individual formulæ prescribed. But we should keep the potassium bromide separate, and add it, in the form of 10 per cent solution, to give the exact quantity recommended for the particular make of paper we were about to develop.

Adurol.

In the issue of November 18th you gave a formula for a developer containing Adurol. None of the local chemists have heard of it. What is it and where can I buy it? J. F. (Enfield.)

Adurol is a German trade-name for either chlorohydroquinone or bromohydroquinone. The former is made in England by Johnson & Sons, Ltd., Hendon, London, under the name of chlorquinol, and can be obtained through any chemist or photographic dealer.

Stops, Exposure, and Definition.

There is a point on the matter of exposure that rather puzzles me. Does a wide aperture and short exposure give the same result as a reduced aperture and longer exposure, always assuming the same field of focus is correctly covered in both cases? I find, for example, that if I take a view, say, 60 ft. to infinity at f/4.5, 1/100th sec., that the definition is not so good as f/11, 1/10th sec., although apparently the combination of factors is identical. F. M. H. (Kendal.)

We are puzzled as to what you mean by saying the same field of focus is correctly covered in both cases. You can easily adjust the exposure to suit the different stops, so that there is no difference in the negative as far as actual exposure is concerned. When it comes, however, to depth of definition, that is an entirely different matter. This depth of definition will vary according to the focal length of the lens, the stop used, and the distance of the plane focussed upon, becoming greater as the aperture of the lens is reduced.

With any first-grade lens the definition of an object actually focussed upon should not be appreciably less good at f/4.5 than at f/11, though we would point out that unsharpness due to the film not lying flat and exactly in the right plane will reveal itself much more definitely at the larger apertures.

35-mm. Film for Recording.

I wish to keep a record of constantly changing curves drawn on tracing paper. I find that 35-mm. square is large enough, which I could get on 35-mm. strip with no perforations. What is the best and most economical type of film for this? Speed of exposure is no object. Can you give me names of probable suppliers of such film strip? A. F. (Stoke-on-Trent.)

We think probably your best plan will be to get into communication with Messrs. Kodak Ltd., Kingsway, London, W.C.2, and with Messrs. Ilford Ltd., Ilford, London, and ask whether they can supply an unperforated 35-mm. film with a suitable emulsion for your purpose. If your curves are drawn in black-and-white a very slow emulsion would be preferable; you might like to try ordinary positive ciné film to see if it gives you the results you want.

You speak of economy—may we remind you that if it is not essential to your purposes to make positive prints of your curves, and if you can be satisfied as a general rule with a single copy of your record, you might like to try a paper coated with a negative emulsion. One at least of the above-mentioned firms supplies this in strips 35-mm. wide, and the cost will probably be much less than that of film.

Home Lighting.

I wonder would you tell me which you consider to be the most effective and reliable make of equipment for home lighting? Bulbs, reflectors, etc., also synchronising flashlight (bulb). And what is the full equipment needed for home lighting and flashlight photographs? F. L. C. (Cheshire.)

Home lighting equipment falls into two classes. First, there are the small reflectors, with stands about the size of an ordinary reading-lamp, designed for use with "Photoflood" bulbs. These are overrun bulbs of very short life, giving a brilliant light and using an amount of current that can be provided by any ordinary lighting system. Since these little outfits are sold in fairly large numbers, they are not expensive. Two such lights, with a white or silvered sheet to act as a reflector, provide quite a good equipment for occasional home photography. They are offered by all the leading makers of photographic accessories.

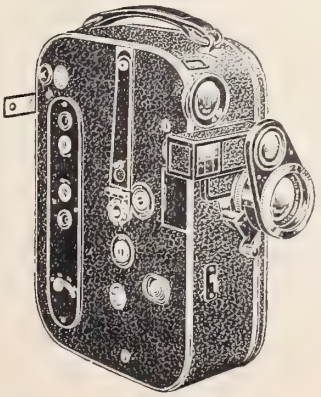
For more continuous use the "Nitraphot" lamps are preferable. These do not give much more light than a "Photoflood," but have a far longer life. Though much more expensive to buy they will still be burning when a supply of "Photofloods" costing ten times as much are all worn out. But they take some 500 watts each, so that to run three or four requires an exceptionally heavily-wired lighting circuit. "Nitraphots" are generally used with big reflectors on semi-portable stands of a type reminiscent of the professional studio.

With the aid of this introduction to the subject we think you will be able to extract all the information you need from the catalogues and pamphlets issued by the various makers. In the matter of flashlight you will find the catalogues self-explanatory.

Part Exchange

If you are considering the exchange of your present ciné apparatus for one of the new models we suggest calling on or writing to us before coming to any final decision, and getting our part exchange quotation on your present apparatus. We realise that exaggerated claims are frequently made in this respect, but feel convinced that readers of *The Amateur Photographer*, by sending us a careful description of the apparatus they have for disposal, and mentioning the type of equipment in which they are interested, will be pleasurably surprised at the scale of our allowances. Besides ciné apparatus, we shall be pleased to accept as part payment miniature cameras and accessories. We can supply immediately from stock all first-class ciné cameras, projectors and talkie apparatus, including, of course, Siemens, Bell & Howell, Victor, and Gebescope equipment.

We have a few first-class slightly used cameras and projectors for sale, particulars of which are as follows :



Filmo Model II, fully gear-driven, 750-watt lamp, Cooke projection lens. Excellent condition **£55**

Siemens Standard Projector, 16-mm., with de luxe carrying-case. Perfect condition **£37 10**

Siemens Model B Camera, f/2.8 Bausch lens, speeds 8, 16, 64, case. As new **£18 10**

Bell & Howell 35-mm. Eyemo Camera, 2-in. f/2.5 Cooke lens and 6-in. Zeiss Tele-Tessar, speeded and masked for sound **£42**

R. G. LEWIS (CINÉ), 202, HIGH HOLBORN, LONDON, W.C.1

THE ZEISS MOVIKON

All the technical refinements that the professional camera-man employs are embodied in the Movikon. Direct focussing on film, slow motion, single exposures, rotating wedge range-finder, f/1.4 Zeiss Sonnar lens—all these things and many other similar features make it the finest hand instrument for the production of 16-mm. films.
There are 26 really outstanding features about the Movikon.

PRICE **£98 : 10 : 0**
Write for descriptive free booklet.

"The WILTON" CINE SCREEN

The SCREEN for "Professional" Results

A distinct advance in design and construction has been achieved in this new screen.
An equalising device which at all times assures perfect symmetry of movement of the whole mechanism eliminates any distortion and reduces the possibility of damage to the screen surface to an absolute minimum.
Another exclusive feature permits quick adjustment of the tension of the spring within the roller if ever required.

Permanently fitted in handsome art leather case with three snap-action locks and protected corners.
Obtainable in either brilliant non-directional silver surface or crystal glass beaded surface.

AMATEURS! YOU CAN MAKE

PROFESSIONAL ENLARGEMENTS

WITH THE

"EXAKT" ENLARGER

Here's the enlarger any amateur will feel proud to own—it will enable him to get faultless results with ease. Trade workers throughout the country are using this apparatus—proof of its mechanical and optical perfection. Its easy automatic focussing is absolutely foolproof—an enlarging scale and focussing scale are set at the same figure and perfect sharpness is instantly obtained. The mechanism is so rigidly constructed that the perfect focussing cannot accidentally alter, however big a batch of work you are doing. Special value is attached to the interchangeability of lenses, but a STEINHEIL-CASSAR f/4.5 is supplied as standard equipment with all models. The Exakt is supplied in four sizes, for negatives from ciné and Leica size up to 9 × 12 cm., at prices ranging from £12 15s. to £52 10s.

An Ideal Christmas Present for the Amateur Photographer

PHOTOGRAPHY TO-DAY

By D. A. SPENCER, Ph.D., D.I.C.

(President of the Royal Photographic Society)

The book is an invaluable guide, not only to the beginner but to every photographer who wishes to improve his technique. It traces the history of photography from the beginning, and the more recent developments, such as the films, colour photography, and photography in the detection of crime, are dealt with. Fully illustrated.

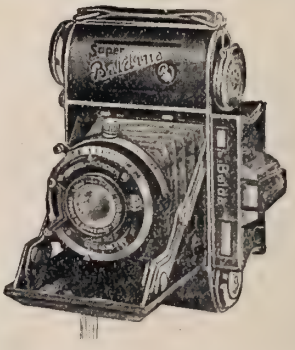
About HALIE *Screens*

THE provision of simple means whereby a photographic image may be modified for the purpose of artistic effect considerably widens the scope of pictorial photography. It is, after all, the personal touch given by a photographer to his work which causes its value and character; the Halie screens will be found to be most useful in the search for special artistic effects. The critical worker will find that their use enables him to give a particular character to his prints, while the most ordinary of photographs can often be materially improved by using a judiciously chosen printing screen.



Such results are usually produced by expensive soft-focus lenses or mechanical diffusing devices, such as ruled discs, but many photographers cannot afford these luxuries. Most photographers—particularly amateurs—experience grain when enlarging, so that the ideal device should also be capable of producing a regular grain in the print rather than the irregular grain produced by the negative.

By simply placing one of the Halie screens over the printing paper during the printing or enlarging process the image is given a character which makes it different and more pleasing to the eye than a "straight" print.

The very wide scope of a *Leica*

ONE big reason for the enormous following that LEICAS have obtained is their truly notable versatility. Literally, you can do the work of a battery of ordinary cameras with just one compact and handy Leica. Landscapes, seascapes, genre studies, architecture, sports scenes, groups, portraits, distant telephoto work, microphotography—all these, and a lot more, are well within its generous scope. A LEICA, in truth, represents not just one camera, but a dozen.

- Let "the WESTMINSTER" show you how a liberal allowance for your present camera in EXCHANGE, and Westminster Out-of-Income facilities, can help you in realising your ambition and acquiring a LEICA.

Leicas cost from £16 upwards. Below is shown the Model IIIa, with f/2 Summar lens, automatic focussing, shutter speeds to 1/1,000th sec. at £43, or 9 monthly payments of £5 0s. 4d.

MISCELLANEOUS ADVERTISEMENTS

Prepaid Advertisements

THE CHARGE FOR ADVERTISEMENTS IN THESE COLUMNS IS :—

12 words or less.....2/6
2½d. for every additional word.

Each paragraph is charged separately.

SERIES DISCOUNTS are allowed to Trade Advertisers as follows on orders for consecutive insertions, provided a contract is placed in advance, and in the absence of fresh instructions the entire "copy" is repeated from the previous issue : 13 consecutive insertions, 5% ; 26 consecutive, 10% ; 52 consecutive, 15%.

All advertisements inserted in these columns must be strictly prepaid, and reach the offices, Dorset House, Stamford Street, S.E.1, not later than first post Friday for the following week's issue, or one day earlier at the Branch Offices, 19, Hertford Street, Coventry ; Guildhall Buildings, Navigation Street, Birmingham, 2 ; 260, Deansgate, Manchester, 3 ; 26B, Renfield Street, Glasgow, C.2.

Advertisements received too late for one issue, or crowded out, are published in the first following in which there is space. The Proprietors retain the right to refuse or withdraw advertisements at their discretion.

The Proprietors are not responsible for clerical or printer's errors, although every care is taken to avoid mistakes.

Box No. Advertisers

If a Box No. is required, the words "Box 000, c/o 'The Amateur Photographer'" should be included in the charge, and an additional 6d. sent for registration and cost of forwarding any replies.

Letters addressed to box numbers are simply forwarded by us to the advertisers. We do not deal with the correspondence in any other way, nor accept any responsibility in connection with the advertisements.

Deposit System

Readers may deal in safety through our Deposit System. Purchase money should be deposited with "The Amateur Photographer and Cinematographer," when both parties are advised of its receipt. The time allowed for decision is three days, counting from receipt of goods, after which period, if buyer decides not to retain goods they must be returned to sender. If a sale is effected, buyer instructs us to remit amount to seller, but if not, seller instructs us to return amount to depositor. Carriage is paid by the buyer, but in event of no sale, and subject to there being no different arrangement between buyer and seller, each pays carriage one way. The seller takes the risk of loss or damage in transit, for which we take no responsibility. For transactions up to £10 a deposit fee of 1/- is charged ; over £10 and under £50, 2/6 ; over £50 and under £75, 5/- ; over £75 and under £100, 7/6 ; over £100 one-half per cent. All correspondence must be sent to Dorset House, Stamford Street, London, S.E.1.

Cheques and Postal Orders sent in payment for deposits or advertisements should be made payable to ILIFFE & SONS LTD., and crossed **& Co.**

Notes being untraceable if lost in transit should not be sent as remittances.

IMPORTANT NOTICE

Owing to the Christmas Holidays, the issue of "THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER" for December 30th must be closed for press earlier than usual.

MISCELLANEOUS ADVERTISEMENTS for insertion in that issue can be accepted up to FIRST POST, WEDNESDAY, DECEMBER 23rd.

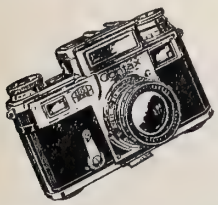
THE MISCELLANEOUS TRADING CO. LTD
13, New Oxford Street, London, W.C.1

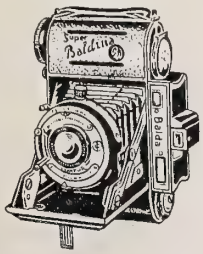


The Miniatures are ALL here

IT is well known that whatever is attempted by "The Westminster" is particularly well carried out. For instance, the stock of Miniature Cameras at *each of the Four* Westminster shops is notably extensive and varied—and the service and facilities by which it is backed are all that people who know "The Westminster" have learnt to expect.

The famous **Leica**, from **£16 19 0** to **£43**. F/3.5 to f/1.5 lens. *Or by twelve monthly payments.*

No claim is made of dealing in Miniatures *only*; a claim that involves rather more than is generally realised. If you want to see all the miniatures at their best,



Zeiss Ikon Contax III. Includes built-in electric exposure meter. With f/3.5 Tessar, **£53 0 0** *Or by twelve monthly payments.*

New **Dollina**, with f/2.9 Radionar lens and Compur Rapid, **£14 12 6**; or with f/2.8 Tessar, etc. *Or by twelve monthly payments.*

however, backed by the most helpful and skilled "Miniature Service" obtainable anywhere, you will find that you cannot do better than go to "The Westminster" (any of the Four).

New **Super Baldina**, with f/2.9 Meyer Trioplan and Compur shutter, **£13 5 0** *Or by twelve monthly payments.*

● ***All these Cameras take 35-mm. film (36 exp. daylight loading) with automatic film counter and built-in range-finder. Ask for full details of these and other 'Miniatures'***

The AMATEUR PHOTOGRAPHER DIARY

and Handbook for 1937

This useful little handbook contains, in addition to the usual diary pages—one week to the page—over fifty pages of facts and formulæ for the keen camera user. Information is given on developing, fixing baths, mountants, and finishing negatives and prints. Numerous reference tables dealing with hyperfocal distances, enlarging, screen distances for lantern projection and exposures are included, as well as sections for exposure records and personal memoranda.

Size 3⅛×5⅜ inches, well printed, neatly and strongly bound in leather cloth, with back loop pencil and round corners.

MAKING 'Light' OF NIGHT PHOTOGRAPHY

FREE

This interesting book of "Night Photography — Picture Making at Night—Indoors and Out"— contains 28 pages of clear information with photographs and diagrams. Please mention this paper.

THE taking of attractive pictures after dark is a simple matter nowadays. No longer is it necessary for your camera to "hibernate" all the winter, or even to "go to bed" at sundown. Wherever there are shops, cinemas, signs, floodlighting—or only street lamps—there are effective subjects for fascinating "night-snaps" waiting to be captured by your camera. And don't forget those indoor pictures, portraits, groups and festive parties—they're all *yours*, and as simple to make as daytime snaps in summer, if you load with Selo Hypersensitive Panchromatic Roll Film or Ilford Hypersensitive Panchromatic Plates.

3 "Photoflood" Lamps in "Kodaflector" Reflectors. Exposure: 1/10 second at f6.3 on Kodak Super Sensitive Panchromatic Film.

"... and be sure to bring your camera to the party!"

Parties . . . dances . . . family festivities . . . This is a particularly gay and amusing time of year. A time when the Great Indoors really comes into its own. How fortunate that good indoor pictures are so much easier to take than they've ever been before! Thanks to . . . . . .

Get this free booklet

24 pages of hints and tips on picture-making indoors at night. Dozens of pictures, with explanatory diagrams and exposure details. Ask your Kodak Dealer for a copy or write for one to Mr. A. P. Taylor, Dept. 57B, Kodak Ltd., Kodak House, Kingsway, London, W.C 2.

SIX ENLARGEMENTS FREE

MINIATURISTS—HERE'S NEWS!

If you use 35-mm. standard ciné film in your camera, pick out six favourite negatives. If you are not already on our books, send these negatives to us, with the coupon from this advertisement duly filled in with the make and number of your camera, lens, etc., adding your full name and address for registration, and we will send

SIX FREE ENLARGEMENTS

one from each of your negatives. What an opportunity to see what those negatives are *really* capable of. They may be well composed subjects, correctly exposed, but if you are unfamiliar with "Automax" Enlargements you cannot know the latent beauty this process will reveal. Please state size preferred—$3\frac{1}{4}\times2\frac{1}{4}$ or $4\frac{1}{4}\times3\frac{1}{4}$. Try "Automax" at our expense—this offer closes definitely on 31st January, 1937.

A FEW SECOND-HAND BARGAINS
GUARANTEED FOR 3 YEARS.

CASH PRIZES *for* "BEAUTIFUL WOMEN" SNAPS

THE SUBJECT FOR JANUARY 14th TO JANUARY 20th WEEK OF WALLACE HEATON'S COMPETITION.

OPEN TO ANY AMATEUR WITH ANY APPARATUS

Whether you send indoor studies by the fireside, spontaneous outdoor snaps, elaborately composed full-length figures, or just simple head and shoulders is left to your discretion, so long as the picture *is* a picture and the main subject a beautiful woman it is eligible. Remember it is a photographic—not a beauty—competition.

Each week we give one guinea for the best picture received—each week we give you a different subject. Everybody has an equal chance of winning a prize, as well as selling us his picture for two guineas. After three months all pictures received will be judged for the final first prize of £25 cash. There are no restrictions with regard to make or size of camera or materials used, and it doesn't matter where your negative was developed and printed. Either contact prints or enlargements up to 15×12 in. (mounted or unmounted) are eligible, but not less than 8×6 is recommended. No retouching or faking is permitted, except simple spotting to remove defects.

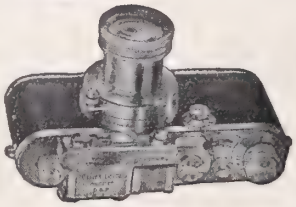
21/- AWARDED FOR EACH WEEK'S BEST PICTURE

£25 FOR THE BEST SENT IN DURING WHOLE COMPETITION

NO RETOUCHING OR FAKING —JUST GOOD PHOTOGRAPHY

We give you four clear weeks to prepare your entries. All entries for the "Beautiful Women" Competition must be sent in between January 14th and 20th. The complete series ends on March 31st, 1937, when the big cash prize winner will be chosen. An additional 21/- will be awarded to prize winner if his enlargement was made by us. For photographs which appeal to us, not necessarily prize-winners, we reserve the right to purchase the copyright by payment of £2 2s.; in the case of weekly prize-winners, by the payment of an extra 21/-. The copyright of the £25 prize-winning print must be made over to us without further payment. Acceptance of the rules is a specific condition of entry. The remaining ten weekly subjects for this competition are: Architecture; Winter Sports; Quick-action Pictures; "New Angle" Shots; Birds, Animals, etc.; Indoor Portraits; Flowers; Figure Studies; Boats and Seascapes; Pictorial Subjects.

Why not prepare your entries in advance?



WALLACE HEATON COMPETITION
THIS COUPON which must be affixed to the back of each entry, is valid for any week until Competition closes on March 31st, 1937; also for the "Open" Competition, which closes on December 31st, 1936.

THE WALLACE HEATON "OPEN" COMPETITION IS STILL RUNNING—ENTRIES CAN BE SENT IN UP TO DECEMBER 31st, 1936 (SEE COUPON).

R. F. HUNTER, LTD., "CELFIX HOUSE," 51, GRAY'S INN ROAD, LONDON, W.C.1

"Celfix" REGD. TRADE MARK

CINÉ SCREENS AND OTHER CINÉ SCREENS, INCLUDING THE SUPER CELFIX, ATLANTA, SELF-RECTA, SILVETTE AND ROLLER SCREENS

On the 24th day of November, 1936, **R. F. Hunter, Ltd.,** issued a Writ in the Chancery Division of the High Court of Justice against **The Camera Company of 320, Vauxhall Bridge Road, in the County of London,** claiming :—

1. An injunction restraining the Defendants their servants and agents from further printing or otherwise reproducing or authorising any further printing or other reproduction of the illustration of a cine screen entitled Vauxhall Cine Screen which is reproduced on page 42 of the issue of "The Amateur Photographer and Cinematographer" for 28th October, 1936, and on page 402 of the issue of the "Amateur Cine World" for December, 1936. 2. Delivery up of infringing copies and plates. 3. Damages for infringement of copyright and conversion. 4. Further and other relief. 5. Costs.

On Tuesday, the 1st day of December, 1936, the following **Order** was made :—

In the High Court of Justice. 1936 R. 2266.

CHANCERY DIVISION.
Mr. JUSTICE BENNETT.
Tuesday, the 1st day of December, 1936.
between **R. F. HUNTER, LIMITED,** Plaintiffs
and
THE CAMERA COMPANY, Defendants.

UPON MOTION *for an injunction this day made unto this Court by Counsel for the Plaintiffs, and* **UPON HEARING** *Counsel for the Defendants and* **UPON READING** *the Writ of Summons issued on 24th November, 1936.*

AND *the Plaintiffs and the Defendants by their Counsel desiring that the said Motion should be treated as a Motion for Judgment and consenting to this Judgment.*

AND *the Defendants by their Counsel undertaking for themselves their directors servants and agents not at any time to print or otherwise reproduce or authorise the reproduction of the illustration of a cine screen entitled Vauxhall Cine Screen; which is reproduced on page 42 of "The Amateur Photographer and Cinematographer" for 28th October, 1936, and on page 402 of the issue of the "Amateur Cine World" for December, 1936.*

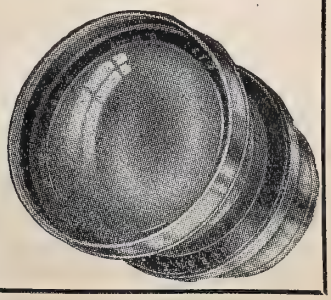
THIS COURT DOTH ORDER *that the following inquiry be made that is to say :—*
(1) An inquiry what damages the Plaintiffs have sustained by reason of the printing or the reproduction by the Defendants of the illustration of a cine screen entitled Vauxhall Cine Screen which was reproduced on page 42 of the issue of "The Amateur Photographer and Cinematographer" for 28th October, 1936, and on page 402 of the issue of the "Amateur Cine World" for December, 1936.

AND IT IS ORDERED *that the Defendants do deliver up to the Plaintiffs the block from which the reproductions of the said illustration were made.*

AND IT IS ORDERED *that the Defendants do pay to the Plaintiffs their costs of this action down to and including this Judgment to be taxed by the Taxing Master.*

THE *costs of the said inquiry are reserved.*

AND *the parties are to be at liberty to apply.*



THE IDEAL LENS . . .

"Times" Photo.

FOR DIFFICULT SUBJECTS

Series O Cooke Lenses (as illustration) with their large apertures of f/2 are the ideal lenses for exceptionally difficult subjects as, for example, night pictures from aeroplanes, stage scenes with ordinary stage lighting and for exacting scientific research demanding the maximum lens speed and covering power. Always remember—a Taylor-Hobson Cooke Lens "makes" the picture!

"The WILTON CINE SCREEN"

A distinct advance in design and construction has been achieved in this new screen.

An equalising device which at all times assures perfect symmetry of movement of the whole mechanism eliminates any distortion and reduces the possibility of damage to the screen surface to an absolute minimum.

Another exclusive feature permits quick adjustment of the tension of the spring within the roller if ever required.

Permanently fitted in handsome art leather case with three snap-action locks and protected corners.

Obtainable in either brilliant non-directional silver surface or crystal glass beaded surface.

Rolleiflex

THE FINEST PRESENT YOU COULD POSSIBLY GET GIVEN YOU

Every day of the year Rolleiflex will take perfect pictures, whatever the light or weather conditions. It will keep the past alive, with a pictorial record such as no other camera at the price can produce. No failures or disappointments—every detail in its manufacture has been designed to ensure ease and accuracy in getting perfect results. It shows the picture full size and right way up on the focussing screen, and takes 12 pictures on $3\frac{1}{4} \times 2\frac{1}{4}$ shilling roll film. It's versatile, too, it can be adapted for plates or 35-mm. ciné film, and a special range of accessories add still more to its capabilities. Fitted with Zeiss Tessar f/3.5 lens and Compur Rapid shutter, speeded to 1/500th sec., T. and B. Price **£25:0:0**

Rolleiflex won the big "Daily Herald" first prizes, £2,500 in 1935 and £3,000 in 1936.

GIVE THIS ATTRACTIVE BOOK

'GOLDEN BOOK OF THE ROLLEIFLEX'

It contains 127 masterpieces of photography and many prize-winning pictures. An inspiration and help to all Rolleicord and Rolleiflex users. Packed with useful data. Price **7/6**

MORE LIGHT ON THE FUTURE OF MINIATURE PHOTOGRAPHY

In last week's *Amateur Photographer* we expressed our opinion regarding the probable future trend in miniature camera design. Here are a few more innovations that are likely to be with us before long—some of which will probably be placed on the market in the course of the next few months, and others, being in the early stages of design, may not reach production for another year or so. First, a really pocketable single-lens miniature reflex is on its way ; the fully automatic Exakta for 24 × 36 mm. negatives. Secondly, a new edition of a very famous twin-lens reflex is expected—fitted in all probability with an f/2 lens. The makers of a certain miniature camera of great renown are said on good authority to be about to add to their present range of interchangeable lenses an f/1.5 lens, practically equal in resolving power to their present admirable standard lens of f/3.5 aperture. The same people are confidently rumoured to be hard at work on a new camera which is to embody, without any increase in bulk, a built-in photo-electric exposure meter. In this case, incidentally, the light is to be admitted to the meter through the lens of the camera itself ; a development which for some time we have felt sure was bound to come, and which brings us one more stage nearer to that epoch of consummate automatism when the camera will select and compose our pictures for us besides merely taking them. Next week, we propose to say a few words about miniature negative material of the future, and the quite remarkable new films that are being introduced in the New Year.

We should be pleased to take any existing instrument, particularly miniature cameras, in part exchange for a Leica.

Leica IIIa, f/3.5 Elmar.....£34 0 0
Leica IIIa, f/2 Summar.....£43 0 0

We are England's Leica dealers. Besides the cameras themselves, we stock, and should be glad to demonstrate, all the auxiliary scientific apparatus, copying equipment, projection apparatus, etc., that go to make the Leica the "universal" camera.

Our Leica service is in every way unique. We are the only firm organised exclusively to process the 35-mm. film used in the Leica. Many famous amateur and professional workers, lacking the time to do their own processing, send their films to us. We issue for the convenience of our customers special postal bags for use when sending films to us, as well as film speed charts, and specially designed order forms for use when selecting negatives for enlargement from 36-exposure film. The publication "Leica News and Technique" is sent monthly free of charge to all Leica users who register with us their names and addresses. In addition, we are glad to send to all Leica owners, or to those interested in Leica photography, the latest Leica literature whenever this is issued.

Some Leica booklets, any of which we shall be pleased to forward on application :—

"Leica Enlarging Equipment."
"Interchangeable Lenses for the Leica."
"Special View-finders for the Leica."
"Copying Equipment for the Leica."
"Auxiliary Reproduction Devices."
"Filters for the Leica."
"Developing and Printing Appliances."
"The Leitz Telyt Lens."

THE FOLLOWING LIST REPRESENTS A VERY SMALL SELECTION OF OUR GUARANTEED SECOND-HAND MINIATURE CAMERAS AND ACCESSORIES, ALL OF WHICH ARE SUBJECTED BEFORE RESALE TO THE MOST CAREFUL TESTS. OUR USED MINIATURE CAMERAS MAY BE PURCHASED WITH THE SAME DEGREE OF CONFIDENCE AS NEW ONES, THE PURCHASE OF APPARATUS FROM US IS AT ALL TIMES A GUARANTEE OF ITS MECHANICAL AND OPTICAL PERFECTION.

★ ★ ★

A Few Exceptional Cameras with Extra-Wide Aperture Lenses. Specially recommended for Winter and Artificial Light Photography in general.

Makinette, a special model with special front, Leitz view-finder, f/2 Supracomar lens, Rapid Compur shutter. Cost approximately £30.....£15 15 0
Leica Model I, fitted with Plasmat f/1.5 lens, short-base Fokos range-finder, case.....£17 10 0
Contax Model II, f/1.5 Sonnar lens. As new £55 0 0
Exakta Multispeeds Model B, latest lever-wind type, f/1.9 Primoplan, lens hood, filter. As new £30 0 0
Exakta Model B, latest lever-wind type, fitted improved Dallmeyer f/1.9 Super-Six lens, indistinguishable from new £26 10 0
Contax Model I, latest 1936 model. Guaranteed very slightly window-soiled only, f/1.5 Sonnar lens, with carton and instructions booklet.....£42 10 0
Another, as above, but second-hand, condition as new £39 10 0

CONTAXES :

Contax Model II, f/2 Sonnar lens, ever-ready case. As new.....£39 15 0
Contax Model I, latest type range-finder, f/2.8 Tessar. As new.....£23 10 0
Contax Model I, latest shutter, but earlier range-finder, f/2.8 Tessar. As new.....£19 10 0
8.5-cm. f/2 Sonnar. As new.....£28 10 0

LEICAS :

Leica Model IIIa, f/2 Summar lens, ever-ready case. As new in every way.....£35 10 0
Leica Model III, chromium, f/2 Summar lens. As new in every way £31 10 0
Leica Model III, black, f/2 Summar lens. Practically as new £29 17 6
Leica Model III, chromium, f/3.5 Elmar. As new £24 15 0
Leica Model II, chromium, f/2.5 Hektor lens. As new £22 10 0
Leica Model II, chromium, f/3.5 Elmar lens. As new £21 10 0
Leica Model II, black, f/2.5 Hektor lens. As new £20 10 0
Leica Model II, black, fitted magnification for range-finder, f/3.5 Elmar lens. Excellent condition £19 10 0
Leica Model I, non-interchangeable, f/3.5 Elmar, case. Good condition.....£7 15 0
Leica 250, f/2 Summar lens, ever-ready case. Cost £57. Excellent condition.....£40 0 0
Leica Model III, black, f/3.5 Elmar, case. As new £23 15 0
Leica Standard Model, f/3.5 Elmar, ever-ready case. Excellent condition.....£11 17 6
Leica Model I, interchangeable, f/2.5 Hektor, case. Good condition £10 17 6
Leitz 5-cm. f/2 Summar, non-collapsible....£9 17 6
Leitz 9-cm. f/4 Elmar. As new.....£8 17 0
Leitz 13.5-cm. f/4.5 Elmar (chromium, coupled). As new.....£10 0 0
Universal Finder, black, as new, £3 ; Chromium, as new, £3 5s. ; Chromium Angular Finder, as new, 32s. 6d. ; Negative Viewer with opal plate, 32s. 6d. ; Flashlight Attachment, £3 ; Reflecting View-finder, 25s. ; Megoflex Attachment, £3 15s. ; Frame Finder, with adjusting mask, 25s. ; Fikus Lens Hood, 12s. ; Slow-speeds Attachment, £2 ; Swing Filter for Valoy (Fylto), 25s. ; Leitz Micro Attachment, in case, as new, £7 ; Leitz Universal Setting Device, Bazoo, as new, £2 17s. 6d.

Other Miniature Cameras fitted with coupled range-finders :

Nettax (only a few weeks old), 2 filters, ever-ready case. As new. Cost £34 10s.....£26 10 0
Super Nettel, f/2.8 Tessar, case. As new....£17 10 0
Dollina II, f/2.8 Tessar. As new.....£13 17 6
Voigtlander Super Bessa, f/4.5 Helomar lens, filter, Compur Rapid. As new.....£12 10 0
Super Ikonta 530/16, f/2.8 Tessar. As new..£20 0 0
Super Ikonta 530/2, f/3.8 Tessar, Rapid Compur, ever-ready case. As new.....£17 17 6
Super Ikonta 530/2, f/4.5 Tessar, Rapid Compur, case. As new £13 18 6
Super Ikonta 530/2, f/4.5 Tessar, normal Compur, case. As new £13 0 0
Plaubel Roll-Op, fitted f/2.8 Anticomar lens. As new £15 15 0
Weltur, f/2.8 Xenar, ever-ready case. As new £14 17 6
Kodak Regent, f/3.8 Xenar, ever-ready case. As new £15 10 0

MINIATURE REFLEXES :

10.5-cm. f/4.5 Xenar Telephoto, for Reflex-Korelle. As new.....£5 18 6
Reflex-Korelle, f/2.9 Radionar, ever-ready case. As new £10 10 0
Ikoflex I, f/4.5 Novar, Derval shutter. As new £5 17 6
Welta Superfekta, f/2.8 Tessar, 2 filters. As new £18 10 0
Exakta Model C, latest lever wind, f/2.8 Tessar, 3 slides and focussing screen. As new.....£24 10 0
Exakta Model B, f/2.8 Tessar, ever-ready case. As new.....£21 10 0
Exakta Model B, f/3.5 Tessar, case. As new £17 10 0
Exakta Model A, latest lever wind, f/3.5 Exaktar £11 15 0
Exakta Model A, f/3.5 Tessar. Excellent condition £13 17 6
Exakta Model A, f/2.9 Xenar. Excellent condition £12 17 6
6-in. f/5.6 Dallon Telephoto, for Exakta. As new £6 10 0
Reflex-Korelle, improved shutter, f/2.8 Tessar. As new.....£15 10 0
Pilot, f/3.5 Tessar, Compur. Excellent condition £11 17 6
Automatic Rolleiflex 6×6, f/3.5 Tessar, Rapid Compur, case. As new.....£19 17 6
Automatic Rolleiflex 6×6, f/3.5 Tessar, Compur, case. Excellent condition £15 15 0
Automatic Rolleiflex 4×4, f/2.8 Tessar, case. As new £15 15 0
Automatic Rolleiflex 4×4, f/2.8 Tessar, Rapid Compur, case. As new.....£19 17 6
Rolleicord, f/3.8 Triotar, ever-ready case. As new £11 7 6
Rolleicord II, f/4.5 Triotar, ever-ready case. As new £11 10 0
Rolleicord II, f/3.5 Triotar, ever-ready case. As new £12 17 6
Noviflex, f/2.9 Trioplan, filter, case. As new £9 17 6
Voigtlander Superb, f/3.5 Skopar, filter, Proxare. As new.....£11 15 0
Foth-Flex, f/3.5 anastigmat. Excellent condition £6 10 0
Welta Perfekta, f/3.5 Trioplan, Compur.....£8 7 6
Rubyette Model II, revolving back, f/4.5 Dallmeyer lens, 3 slides. As new.....£8 17 6
Ikoflex, f/4.5 Novar, Rapid Compur. As new £7 17 6
Automatic Rolleiflex 6×6, f/4.5 Tessar, case. Excellent condition.....£13 10 0

MISCELLANEOUS :

Ermanox, for V.P. Plates, f/1.8 Ernostar, focal-plane shutter, 6 slides and case. Good condition £10 0 0
Voigtlander Perkeo, f/3.5 Skopar, Compur shutter. Excellent condition £5 15 0
Wirgin, for 16 exposures on 3¼×2¼ film, f/3.8 Trioplan, Rapid Compur. As new.....£5 5 0
Kodak Pupille, bought new six weeks ago, f/2.8 Tessar, case. Unsoiled in any way.....£12 10 0
Dolly, for 8 or 16 exposures on V.P. roll film, f/3.5 Trioplan, Compur shutter. As new.....£4 2 6
Beira, for 24×36 mm. negatives, f/3.5 Trioplan, Compur £7 19 6
Foth-Derby, f/3.5 lens. Excellent condition..£3 12 6
Minifex, f/3.5 Trioplan, Compur, case. As new £5 12 6
Ensign Autorange, fitted f/4.5 Ensar, Compur shutter, case. Excellent condition.....£7 15 0
Foth-Derby, f/2.5 lens. Excellent condition..£5 5 0
Voigtlander Virtus (16 on 3¼×2¼), f/3.5 Skopar. Excellent condition £6 5 0
Ikonta 520, f/3.5 Novar, Rapid Compur. As new £6 10 0
Baldax (16 on 3¼×2¼), f/3.5 Trioplan, Compur. As new £5 15 0
Nagel Vollenda (V.P. size), f/4.5 Radionar, Pronto shutter. Excellent condition.....£3 17 6
Plaubel Makina Model II, f/2.9 Anticomar lens, coupled range-finder, 3 slides and F.P. adapter..£25 0 0

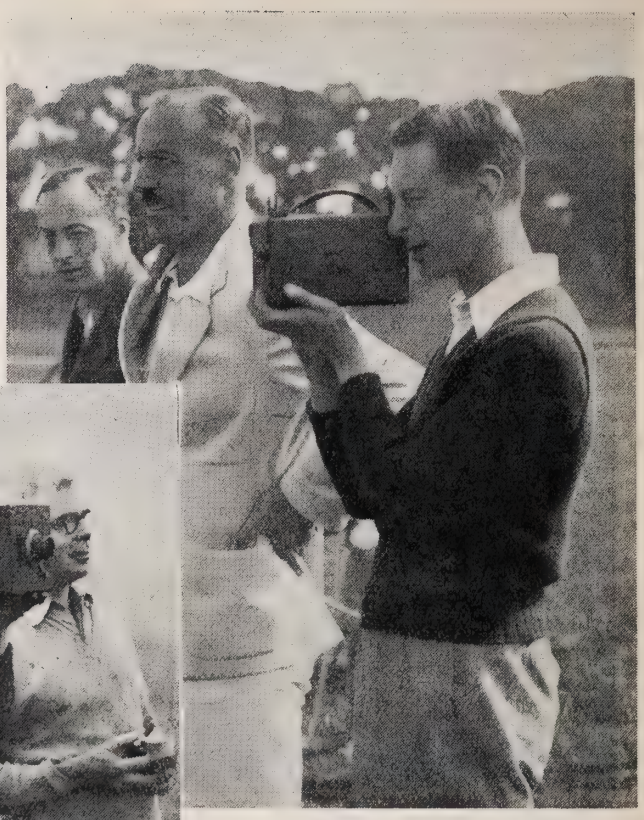
HIS MAJESTY KING GEORGE VI, WITH HER MAJESTY QUEEN ELIZABETH AND THE PRINCESSES ELIZABETH AND MARGARET ROSE.



A Happy Family Group.

Our New King

as an Amateur Photographer

The King and Queen (when Duke and Duchess of York) on board the "Britannia."

The King filming with a 16-mm. Camera.

His Majesty is here seen taking snapshots at his Boys' Camp at Southwold.

The King has a good working knowledge of professional movie apparatus—

—and is also familiar with the 9.5-mm. ciné camera.

His Majesty is keenly interested in all phases of amateur photography and in the above illustration is seen discussing the merits of a camera with a press photographer.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

Christmas and the Camera

By BRIAN BOND.

Modern photographic apparatus and materials allow the camera to take its place in the family circle at Christmas. In addition the photographer is able to contribute to the entertainment during the festive season.

CHRISTMAS ! The name conjures up endless visions, and we see our homes brightly lit and decorated, the children's tree by the window, the battalions of Christmas cards lining the mantelshelf and all manner of pleasant things in store.

Essentially a home festival, we say, when families get together more than at any other time. Yet how infrequently do we see happy pictures of the revelries of Christmas-time. Aren't we neglecting some of the finest opportunities our camera has ever had ?

Generally the fun is so fast and furious, there is so much to do, with Gargantuan meals to prepare, games to be arranged, and always plenty to talk about, that perhaps our camera consciousness is rather squeezed out into the cold to die a natural death.

Plan Beforehand.

If we do some planning before things really begin to get busy, with only a little arrangement we can get a series of pictures that will crystallise the spirit of Christmas and be glad mementos on which we can look back with pride.

What sort of picture should we take ? Well, as this is the season of goodwill and happiness, our pictures should be happy too, and if we can instil into them some of the fun as well, so much the better.

What about two pictures of the dinner table, before and after ! Surely a record of achievement seldom attained at other times ! Then we might have a close-up of the *pièce de résistance*, turkey or pudding, whichever way our preferences lie.

It is not only a record of the dining accomplishments that we desire, however, so perhaps we can hark back to earlier in the day, when the presents were opened. A surreptitious and unposed snap of juvenile delight at this great moment could yield great results, provided that the occasion takes place at a reasonable hour.

Then the games. What fun to get a permanent record of the sight that Cousin Mary looked when she was dressed up for the charades—or Brother Bill as the big business man, with the hat that would fall over his ears !

Such subjects as the children at the " lucky dip " tub or the performance of Eric, the amateur conjurer, are within our reach if we think things out beforehand, and do not hold up the festivities with multitudinous preparations.

As this type of picture might not be available till after dark, artificial illumination would have to be used, but with the facilities now available, this should not present much difficulty, Here is an opportunity for the amateur to show off his prowess with a flashlight with which he has practised during the preceding weeks. One warning, however—mind the paper decorations, they are likely to be inflammable. The judicious use of photoflood lamps might for this reason be better in some cases.

The subject of home photography has been repeatedly dealt with in these pages so there is no need to go into the matter further here. One point may be stressed. The photographer whose equipment is of modest order may well feel that these pictures are only to be made with apparatus of the highest class, fitted with a lens working somewhere within the region of f/2, and there is little chance of successful results with cameras of simpler type. This is not the case. Modern sensitive materials are now of such high speed that home portraits are possible to the user of a box camera.

Exposures.

It is true that his exposures will have to be made with the camera upon some support, and may run into four or five seconds, with the photoflood type of lamp, but this is not impossible with adult sitters. Instantaneous pictures are possible by the aid of Sashalite bulbs, or by means of flashpowder.

The photographer who has not tried the experiment will be somewhat surprised at the interest that the exposures arouse, and how they will be valued as souvenirs.

Brightly-coloured costumes, to say nothing of fancy dress, give opportunities for the colour photographer. The modern colour films are rapid, and it is possible to secure excellent results with an exposure of a second or two. There is also the fact that these films can be processed very rapidly, and the photographer who can do this will have the satisfaction of showing the results within a few minutes of making the exposures. He will gain a new standing as a photographer in the opinion of his friends.

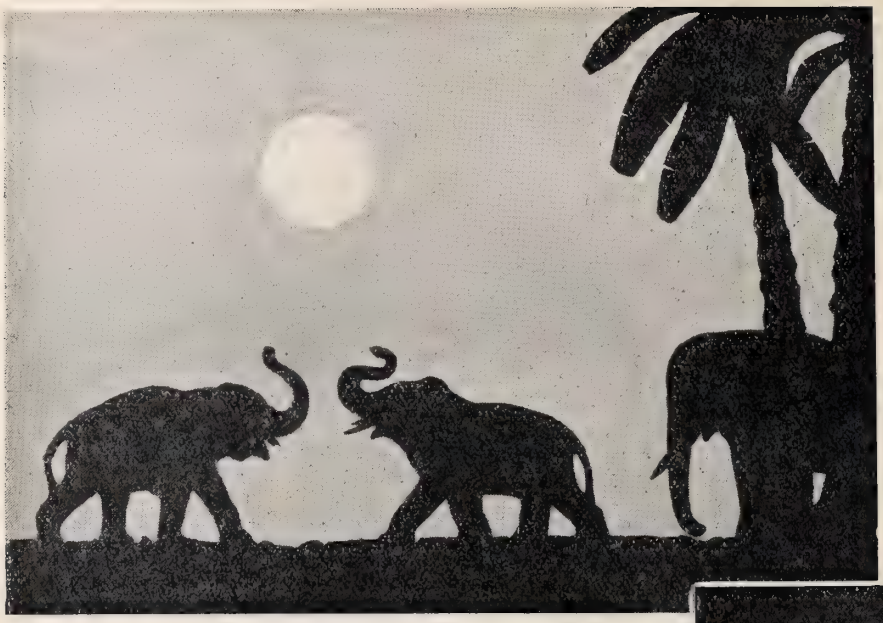
The same applies if a photograph is taken of the Christmas party group. The plate or film may be developed at once, dried rapidly by immersing the negative in methylated spirit, after a brief wash following fixing, a print made, and carefully dried by heat, and the whole shown in about a quarter of an hour from taking the picture. Youngsters are always interested in photographic operations.

Demonstrations.

Here is an opportunity to enliven interest when the young people are becoming rather tired of games. Set the camera up, and make an exposure. Turn out the lights, and place the plate in a desensitiser, and, this complete, development can be seen by all by the light of a candle. The plate is fixed, and when ready for washing the party is dispersed temporarily while it is washed and quickly dried.

Later on, the party is called together again, and one or two gaslight prints made. It will be found that " how it is done " will prove very popular by those who in the summer hand their films to the " D. & P." establishment.

An amusing note can be struck by taking one or two portraits of members of the family, and, before the negatives are dry, the films subjected to the heat of a candle. This will cause the film to " run," and the resulting prints can be calculated to cause amusement. It is well in this case to obtain permission from the subject.



Lastly, we may suggest the lantern or ciné show of pictures taken during the past year. If possible some should be included that the audience have not seen. This may be an interlude, and it must not be too long.

Then as a grand finale, perhaps a " Good night " scene on the doorstep, with the lighted hall as background, or a group of carollers round the door ; subjects not easy to get, but just difficult enough to put the photographer on his mettle, and feel that they are worth trying.

Don't neglect that camera at Christmas this year.

Photog SIL

By DONALD G. SHELDON.

Tropical Triangle.

THERE are times when we grow tired of straightforward photography. We feel that for once in a while we would like to break all the usual rules and see what happens. Well, why not break a few—and make some silhouettes? This is the right time of year to do it.

In our everyday photography, many of us tend to get our photographs too contrasty. We are liable to under-expose and over-develop our films or plates. We often make matters worse by using grades of printing paper too vigorous for the negative. And so we get dense, black shadows and blank, white skies.

This excessive contrast is wrong in ordinary photography, but for making silhouettes it is just what we need. So we deliberately make for contrast in several ways. First, we choose a contrasty subject and lighting. We place our model or object in front of a brilliant background, arranging matters so that as little light as possible falls on the near side of it. Then we under-expose; that is, we give an exposure so short that only the bright parts are registered.

When we develop the film, we double the time of development or the strength of the developer. This makes the contrast between the dark and bright parts still greater. Finally, the prints are made on "contrasty" paper. What a smashing of the rules! And if we've smashed them hard enough we get our silhouette.

A word of warning is necessary here. The extreme contrasts are liable to produce "light-spread," which will make sharp edges less clear-cut than they should be; the full development makes this defect still more pronounced. Backed materials will prevent this, so that the slight extra cost of backed plates or of "chrome" or panchromatic film (both these are backed) is well worth while.

Perhaps the best known type of silhouette is that made by flashlight.

Ballet.

We stretch a white sheet across a doorway at night, taking care to smooth out any creases. The model is posed in front of this, in such a way that the profile is clearly shown. The camera shutter is set to "time" and opened, the flash fired behind the sheet, and the shutter closed.

There is great scope for ingenuity in posing the model so that the resulting silhouette is humorous or dramatic. Variety may be introduced by placing a reflector so that a little of the light from the brilliant sheet is thrown on to the model's features, giving a half-silhouette effect as in "The Musician."

When the subject is a still one, we can use electric light or gas instead of the flash. "Ballet" was taken in this way. The dancers were cut out of cardboard,

Excelsior.

raphic HOUETTES

and mounted on a board which acted as the stage floor. The wiring on the stage front was made from match-sticks and two pieces of string. The background curtain was a bed-sheet hung over a doorway and pleated. The electric bulb was placed inside an open box, the top of which cut off some light, and made the shaded effect on the curtain. A short time exposure on Verichrome film was sufficient to record the silhouette.

Many humorous effects can be devised with the aid of the toy models sold by the sixpenny stores, with "backgrounds" cut out of black paper or thin cardboard. The cut-out trees, houses, etc., are pasted on to a sheet

The Musician.

Moonlight Serenade.

of glass; the models are then placed and held in position on the glass by means of pieces of Plasticine. The glass is reared up in front of the illuminated sheet. Only the silhouetted objects will be shown on the printed portion of the negative.

Toned "skies" may be added when making the print, by giving a short exposure to weak white light before development. We can put on a "sun" or "moon" where we want one, by the simple process of laying on the print a coin of suitable size before exposing to the white light.

Outdoor silhouettes can be made if the object is dark and bold, and is so placed that it stands out from one of nature's backgrounds—a clouded sky or a brilliantly-lit stretch of water.

At sunset, when the sun has dipped below the horizon or is masked by clouds, the landscape is very poorly lit in comparison with the sky, as many of us have found to our cost when photographing sunset scenes. If we can find a suitable skyline or hill-top to place against such a sky, we have only to "snapshot" any suitable figure or group to record a ready-made silhouette.

When the prints are being made, vigorous gaslight or extra-contrasty bromide papers will give the best results. Unless glossy prints are required for reproduction purposes, a smooth "velvet" or "art" surface paper is recommended, as rough and matt surface papers give rather dull-looking blacks. Spotting of defects may be done with black drawing-ink, and this can be used also to correct outlines where necessary.

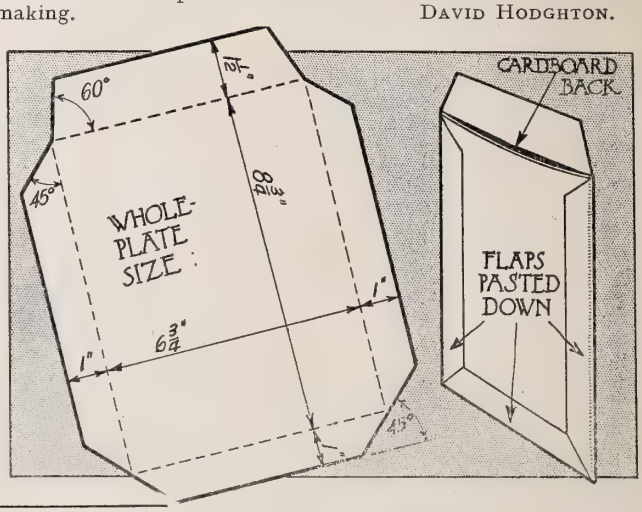
An Outdoor Silhouette.

Procession.

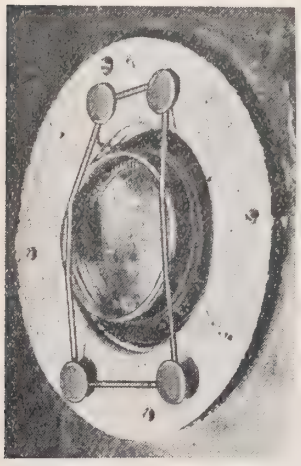
Readers' Hints, Tips and Gadgets

PACKING PHOTOGRAPHS FOR THE POST.

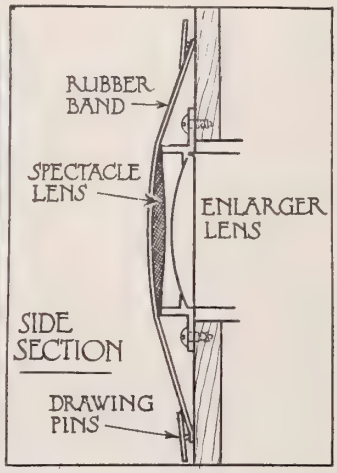
AT the present time, more than at any other, when amateur photographers are sending photographs as greetings for Christmas and the New Year, it will pay the sender if he spends a little time in seeing that his pictures are properly packed so that they will arrive in good condition. With the aid of a template it is possible to make any number of envelopes, and the cost need be very little. A visit to the local grocer or draper will usually produce enough cardboard to make as many envelopes as one requires.



The template is cut from cardboard or thin plywood and once made can be used for a lifetime. (If made in cardboard cut it out with a knife and straight-edge.)



To make an envelope lay the template on a piece of brown paper, mark round the edges with a pencil and cut with scissors or, better still, with a knife and straight-edge (not on the table, of course) to the line. Then cut a piece of cardboard to the size of the dotted lines in drawing ($8\frac{3}{4} \times 6\frac{3}{4}$ in.). Lay this cardboard on top of the brown paper (as in drawing) and bend the paper flaps over on top of the cardboard. The bottom and side flaps are then pasted and fixed down as shown in sketch. I usually put a newspaper on top and use a roller squeegee.



We now have an envelope with a paper front and a cardboard back, and a dozen of these can be made in an hour or so.

This template is for whole-plate ($8\frac{1}{2} \times 6\frac{1}{2}$ in.) prints, but the reader can make as many templates as he wishes to take the size of prints he uses. When posting I always cut another piece of cardboard slightly less than the back, and the prints are then sandwiched between the two cards. This saves them from injury during transit. Always mark in large print on your envelope, "Photographs. Please don't bend." A set of these templates to take the standard sizes is well worth making.

DAVID HODGHTON.

GETTING BIG ENLARGEMENTS WHEN SPACE IS LIMITED.

GETTING that large head from a miniature negative is often beyond the scope of many enlargers owing to space limitations. When the longest distance between enlarging lens and easel is such that the magnification required is not obtainable, the usual solution is a lens of shorter focal length. Such a lens, if an anastigmat, is expensive.

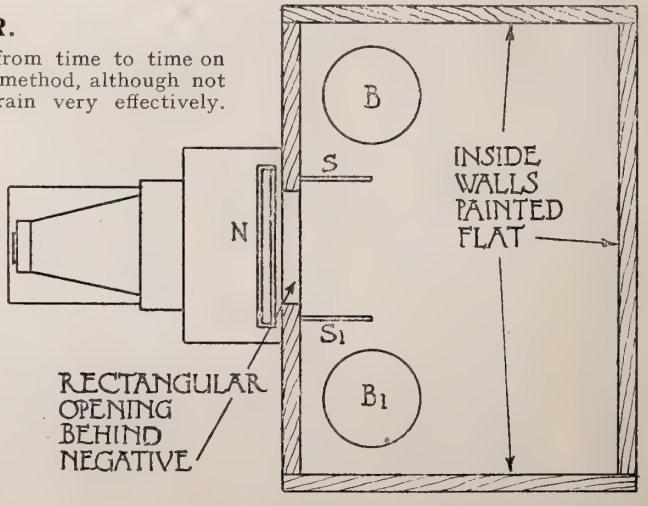
A cheap and simple substitute for this is a combination lens made by adding a supplementary single lens to the lens already in use. This supplementary lens may be obtained at the nothing-over-sixpence stores and costs but threepence. It is the circular spectacle lens which is sold to replace a broken lens in "horn-rimmed" spectacles. This may be bought unmounted. Such lenses are numbered, and suitable ones are Nos. 20, 24, and 32. The lower the number the greater is the magnification.

Such a lens is easily held on the front of the enlarger lens by means of an elastic band fastened to the body of the enlarger by means of four drawing-pins, as shown in the accompanying photograph. The definition of this combination lens will be found to be excellent.

LLEW. E. MORGAN.

A CONDENSERLESS ENLARGER.

ALTHOUGH several schemes have appeared in "The A.P." from time to time on diffusing light for condenserless enlargers, the following method, although not new, will solve the problem and help to minimise grain very effectively.



The body of the enlarger is a fairly large box as shown in plan in the diagram. B and B_1 are 100-watt frosted electric bulbs, placed approximately as indicated. S and S_1 are tin screens. The purpose of these will be seen later. N is the negative carrier. The interior of the box, back, top, bottom and sides, is painted white.

It will be seen that light from the lamps is reflected back from the back of the lamphouse, through the aperture behind the negative, and then on through the lens. As this light is perfectly level and diffused, no unevenness will be experienced. The purpose of the two screens S and S_1 is to prevent direct light from the lamps reaching the negative, and they should be made just large enough for this purpose.

It might be thought that exposures would be prolonged, but I find that ten to twenty seconds at f/11 on Kodak bromide paper is ample when enlarging to whole-plate from $2\frac{1}{4} \times 1\frac{3}{4}$.

Suitable light-trapped holes for ventilation can be added to the back and sides of the box to prevent it becoming overheated.

F. M. THOMAS.

"MINIATURE" NOTES

Short articles, illustrations, hints and tips, formulæ, reviews, queries and replies dealing with Miniature Camera work will appear under this heading every week.

The Inexpensive Miniature

What the Cheaper Camera will do.

THE photographer to whom miniature photography appeals, but who is not in a position to afford the high precision miniature camera, often asks, "Will the cheaper miniature cameras equal the performance of the higher quality instruments? With twelve pounds, or six, or three to spend, how far will my results suffer as compared with those from forty pounds' worth of concentrated precision?"

To that question there are really two answers, because the price-range from twelve pounds to three pounds covers two groups of cameras. For a price towards the upper limit one can purchase a camera that is comparatively inexpensive only because it is comparatively simple. The lens, though of moderate aperture by miniature standards, is of the highest quality, and the shutter has a full range of speeds, but coupled range-finders, interchangeability of lenses, interlinked shutter and film wind, and other such costly refinements, are omitted. Such a camera, naturally, is not as convenient or as quick to handle as a miniature costing some forty pounds, nor will it take photographs under such adverse conditions; but what it will do, it does every bit as well, and the negatives will stand enlargement to almost any size.

In the miniatures selling at lower prices, especially if they have lenses of fancy aperture, it is inevitable that quality must have been sacrificed to some extent to price. In connection with such cameras as these it is unfair to expect too much in the way of microscopic definition; after all, the ability to make huge enlargements without a loss of sharpness represents a very high degree of accuracy in manufacture—and accuracy is always expensive.

But how many photographers make such enormous prints? Most are content with a modest whole-plate or 10×8, and for this less exacting taste a miniature camera of moderate price is adequate.

It is obvious that if enlargements are to be satisfactory with regard to definition a good lens is necessary. The combination of pin-sharp definition and ultra-wide aperture is inevitably expensive, but the cheaper anastigmats may give perfect definition at more modest apertures.

There are plenty of lenses working at f/4.5 that give completely satisfactory performance.

The camera itself must be well made, and rigid. Some of the lower-priced miniatures fail on this score. It is very important that the lens should be held rigid, and parallel with the film.

However sharp the image thrown by the lens, the picture will not be sharp unless the film is in exactly the right place to receive the image. Means for holding the film rigorously flat in the focal plane is essential. If the film lies unevenly, even to the smallest extent, the photograph will be sharp only in places.

The careful user of the miniature camera will be able to produce results that will not indicate, through any lack of quality, either the modest size of the negative or the low price of the instrument with which they were produced. Perfectly satisfactory results can be obtained with miniature cameras costing from about £3 upwards.

Even if the limitations of such apparatus place high-speed photography, theatre snapshots and night scenes outside its range, it should still be able to take every subject that the user of the ordinary folding camera can photograph successfully.

The accompanying illustrations tell their own story. The inexpensive camera gives a perfectly good account of itself so long as the demands made upon it are moderate. But the definition given by an inexpensive wide-aperture lens does sometimes break down at very high degrees of enlargement. F. S.

Fig. 1.—*Taken with Precision Miniature. Lens at full aperture.*

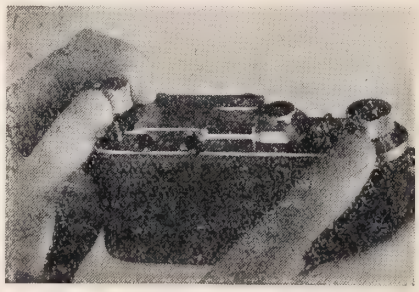


Fig. 2.—*Taken with Inexpensive Miniature. Lens at full aperture.*

The top print in each case is made from the whole negative. The second print is a full-size reproduction of part of a print of about whole-plate size. The difference in definition between the two is not at all noticeable, though it can just be seen if looked for carefully. In the bottom prints, made by reduction from portions of enlargements 36×24 in., the superiority of the precision camera becomes manifest. But results from the inexpensive camera are completely satisfactory so long as these huge enlargements are not demanded.

Ensuring Film-Wind in a Leica

THERE are a few simple precautions that will avoid any possibility of accidental double exposure with a Leica, due to the film not advancing between exposures. If this happens it will mean thirty-six exposures one on top of another, with over five feet of clear film as a memento of the incident. —I know, because it was one of the first spectacular feats that I achieved with my camera.

The film in a Leica camera is advanced by sprockets rotated by means of the winding knob, and there is also a frictional take-up on the winding spool. If the perforations are broken on the film the sprockets can rotate without moving the film on, or if the film has become jammed, then once the sprockets are free, there is nothing to prevent the winding knob being turned while the film remains stationary.

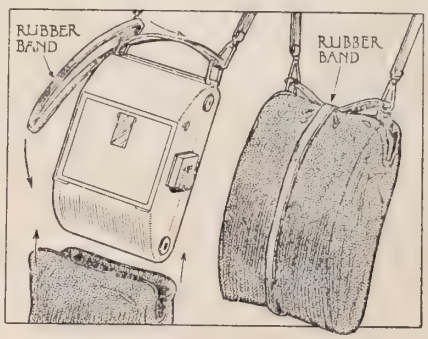
Taking up the Slack.

This is detected by the failure of the back-winding knob to turn in an anti-clockwise direction, but if short ends are being employed in a metal film-chamber the roll of film may have become loosened in the chamber, so that several exposures are made before the slack film has been drawn off and the centre spool begins to rotate. To ensure against any such trouble, all film ends should be examined against broken perforations, and if the film has been cut from a length, it is essential to trim it without cutting through a perforation. This is done automatically if the correct film-trimming template is used for the purpose.

When loading, the back should be locked in position before any attempt is made to turn the winding knob. An over-nervous photographer is tempted to wind on a little film to see if it is going to engage before replacing the lid of the camera, but in the case of the metal spool-chamber, locking the lid opens the light trap of the chamber at the same time, and therefore decreases the pull on the film itself.

Another possible cause of non-advance of film is that the trimmed end may not have been properly pushed under the clip of the winding spool, so that the perforations are not in line with the sprockets. These difficulties should not arise if due care is taken when loading, and once the film has been loaded, the back-winding knob should be gently turned in a clockwise direction to take up any slack in the film roll, after which it can be readily seen if this revolves when winding off the fogged film.

Any failure on the part of the film to advance usually takes place at the commencement of a new film. Once it has started, no further difficulty need be expected.



BERNARD ALFIERI, JUN.

Carrying the Miniature Camera

By A. J. MILNE.

THERE is no doubt that the vogue of carrying the miniature camera in an ever-ready case suspended by a short strap round the neck is very popular, as it is both practical and comfortable.

The same idea can be adopted for other cameras, using zip purses, but they must possess some means of securing the neck-strap, either by the carrying handles or with special loops of leather or metal fixed for the purpose.

Before clipping the strap on to the camera, slip on a stout rubber band about ¼ in. wide and 3 in. long so that it is always on the strap. This secures the zip purse which is slipped upwards over the camera and the rubber band is pulled over both camera and case. This, of course, means that the case is removed entirely while the exposures are being made, but if it is desired to keep the case always connected, then it is suggested that a small leather strap be sewn on the lower edge of the case with the rubber band in position. This will prevent the possibility of mislaying the case. It will be seen that the zip fastener cannot be drawn together as the two strap ends prevent this, so that any similar type of purse with or without fasteners will serve equally well.

A word of warning when using cameras suspended by the metal carrying-handle links. If the camera is on the heavy side and the links are thin, there is a danger of them bending outwards.

Pan or Ortho?

THE full sensitivity to colour of the panchromatic film results in obtaining better correction with a filter of given depth than an orthochromatic film can offer, while at the same time requiring less increase of exposure. Where the pan. film may give all the correction required with a pale filter requiring about 1½ times increase in exposure, an ortho. film may need a deeper filter requiring the exposure to be multiplied by three or four. In these circumstances a pan. film of speed 500 H. & D. may actually allow of shorter exposures than an ortho. film of 1,000 H. & D., and still give equally good colour rendering. Confirmed users of filters will do well, therefore, to consider the pros and cons of changing to a panchromatic film for habitual use.

For Sharpest Pictures.

To set against this there is the not uncommon experience that an ortho. film will often yield pictures just a shade sharper in definition than those which a pan. film will give. This is partly due to the fact that red light, to which only the pan. film responds, is scattered more than light of other colours, and so tends to superimpose a microscopic blur upon the image. Sometimes it is due to slight lack of correction in the lens; it is customary to design a lens so that it brings blue and yellow-green rays to a focus at exactly the same point, these being the two colours to which ortho. film is, or has been in the past, most sensitive. In some lenses this correction has not been so completely made for red rays, with the result that when by using pan. film we allow the red rays to enter into the image formation, their contribution is to a minute extent out of focus, so reducing the sharpness of the negative as a whole. A. L. M. S.

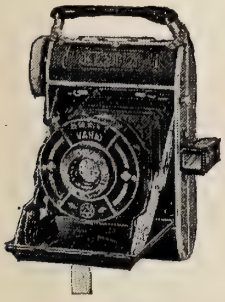
Filing 35-mm. Negatives.

MESSRS. E. LEITZ, LTD., of 20, Mortimer Street, W.1, have recently introduced two inexpensive containers for filing and indexing negatives on 35-mm. ciné film.

The "Leica Wallet Container" accommodates one 36-exposure length in nine sections of four negatives each. The strips slide into a series of pockets of transparent paper which fold up, concertina fashion, into an outer envelope of stout paper. All negatives can be viewed simultaneously without removal from the container, which is sold at the very modest price of sixpence.

The "Leica Negative Album" takes twelve complete films of 36 exposures each, again in four-exposure lengths. The album, which measures 7¼×6 in., contains three sections, each of which contains thirty-six transparent envelopes. There is also a set of index-sheets for identifying and describing every negative. It is covered in linen card in such a way that negatives cannot work out from the pockets, and closes with a snap fastener. It is priced at 4s. 6d.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER



Modern Miniature Cameras

THE "WESTEX" MINIATURE CAMERAS.

THE two models of the "Westex" miniature cameras are known as the "Baby" and the "Junior." So far as the camera body is concerned the two are identical, the differences being solely concerned with the lens and shutter equipment. Both make sixteen exposures, each 3×4 cm., on a standard eight-exposure roll of V.P. film.

The camera measures $4\frac{1}{8} \times 3\frac{1}{4} \times 1\frac{3}{8}$ over all projections and fits extremely conveniently in the pocket. On pressing a button on the side of the camera the baseboard flies down, bringing the front into position. When erected, the camera is extremely rigid, and since focussing is performed in both models by rotating the front cell of the lens, there will be no mechanical wear to cause looseness during the life of the camera.

The view-finder is of the optical direct-vision type, being in the form of a small tubular telescope firmly built on to the side of the camera. It is adequately large, and gives a very clear image with boundaries more distinctly marked than in many finders of its type. The back of the camera hinges open for loading, and the spool-chambers swing out to enable the spools to be readily inserted. A pressure-plate is provided to hold the film flat in the focal plane. The usual pair of red windows is provided, together with a cover which serves to prevent the entry of light and consequent fogging of panchromatic film.

The Westex Junior.

In the "Junior" model, which sells at £3 12s. 6d., the lens is a Vidanar anastigmat of 5-cm. focal length working at f/4.5. This is mounted in a Vario shutter, which has snapshot speeds of 1/25th, 1/50th and 1/100th sec., as well as bulb and time. The shutter is ever-set, and has a remote-control delayed-action device. This is operated by inserting a pin into a hole in the front of the shutter, and pressing the release. This sets the shutter but does not fire it, but it opens when the pin is withdrawn. It is intended this should be done from a distance by means of a length of black thread. The lens focusses from infinity to 3 ft. by rotation of the front cell. The setting of the iris diaphragm and the shutter speeds can conveniently be read from the top of the camera.

The "Baby" model is fitted with an f/2.9 Schneider Radionar anastigmat of 5-cm. focal length, working at f/2.9. This lens is fitted in a Prontor II shutter, giving speeds from 1 to 1/175th sec. This shutter is not of the ever-set type, but requires cocking before use. It differs from other shutters in that it requires setting for bulb and time as well as for the instantaneous speeds. The price of this model is £5 12s. 6d.

A delayed-action device is provided, this consisting of a train of clockwork which releases the shutter ten seconds after the release lever is pressed. The lever by which this clockwork is wound can be turned to less than its full travel to obtain shorter periods of delay. Front cell focussing is used again in this model, which focusses down to $3\frac{1}{2}$ ft.

We have subjected the "Baby" model to a fairly exhaustive test, in the course of which we found that the Radionar lens with which it is fitted gives very good definition over the whole area of the film, even at the full aperture of f/2.9. The whole-plate enlargements that we made from negatives taken at f/2.9 were completely satisfactory, and it is evident that the user of this camera will not need to stop down the lens to obtain sharpness, though, of course, he may sometimes need to do so to increase the depth of focus or to provide a margin of safety against a possible misjudgment of distance.

Comparative exposures were made at two different apertures, the difference in aperture being compensated as regards exposure by a corresponding change in shutter speed, so that in a correctly graduated shutter the negatives would have been of equal density. On development, the difference in density was found to be negligibly small, thus confirming the relative correctness of the shutter speeds.

These cameras are obtainable from any of the four branches of the Westminster Photographic Exchange, Ltd., the addresses being 119, Victoria Street, S.W.1; 81, Strand, W.C.2; 24, Charing Cross Road, W.C.2, and 111, Oxford Street, W.1.

Miniature Camera Gossip

By LANCELOT VINING.

Greetings.

I WANT to wish all my readers a very happy Christmas and a prosperous 1937, with plenty of good photography and the good luck to "see" some really good subjects.

I wonder if you ever say to yourself, as I often do when looking through the photographic annuals: "What would I have given to have run across that subject," and you imagine that these subjects are only to be found if you are travelling about. When I get into this state of mind I think of Mr. W. G. Briggs' "Water Butt" picture, and realise that we are literally surrounded by pictures, if we can only "see" them.

New Long-focus Lens.

I called in at the house of Zeiss in Mortimer Street last week to see if I could glean any news of a new long-focus lens for the Contax. I had heard about one from Mr. H. B. Sharp, of Dundee; he told me he had the only one that is in the country—it was brought over specially from Germany for him.

The lens was designed for the recent Olympic Games, and is expected to be released to the public early in January. It is called the Tele-Sonnar, has a focus of $7\frac{1}{8}$ in. (18 cm.), works at f/2.8, and is coupled to the range-finder. It has only six glass-air surfaces, and I am promised very brilliant results at full aperture. I put it like this because I have been promised an opportunity of giving the first one that comes over in January a practical trial. The only thing I dislike about it is the price—sixty-four shillings would be more in my line.

David McLellan's Christmas Card.

Christmas Festivities.

Do not let the Christmas holidays pass without having a shot at the festivities at home. You have several choices of lights, which will do away with any need to pose your subjects, even if your lens aperture is no larger than f/3.5.

There are the popular "photoflood" lamps, which plug into the ordinary electric light socket. These give a brilliant light, and have a safety fuse incorporated. Check up that the voltage is correct for your circuit, and remember that as these lamps are gas-filled they generate great heat, so do not burn them for any length of time, and be careful how you handle them after use. Burnt hands are painful!

At 15 feet, 1/25th at f/1.5.

Then there are the more ambitious lighting sets by Kodak, Ilford and Ensign; these are more expensive to buy, but more economical in the end if much work is to be done, as well as being more convenient. Then if you prefer flashing, you can use Sashalite bulbs, which have recently been reduced in price. With them there is no smoke, smell or danger.

You will have any amount of fun, and may perhaps find you have an ideal photograph for next year's Christmas card. (See illustration.) This is a very clever photograph for a card, made by David McLellan of himself. McLellan is on the *Sunday Pictorial* staff and is one of the best technical photographers in "The Street."

Pan. Film saves the Situation.

I was invited to take my candid camera along to the golf club dinner to our departing pro., and with some doubts as to what the light would be like, I did so. I need not have worried on that score, as it was good, though nothing to rave about; but oh, the tobacco smoke when it was time to get to work!

The room was filled with the 120 diners, and quite 100 of them were smoking. I wondered whether my fast pan. film could ever eat through it. I had the results from the "Royal" dinner to go by, but the atmosphere at the Monico was June-like compared with this November fog!

The results provided me with another pleasant surprise. When I exposed I could scarcely see the artiste singing at the piano, but I gave 1/25th sec. at f/1.5, and obtained the accompanying result.

CHOOSING A FILM *for the MINIATURE*

Various Types Compared.

THE miniature camera is more profoundly affected than any other by the choice of the correct grade of film, if only because the small negative has to add freedom from grain to all the other qualities that the user of a large camera demands.

The perfect film has not yet been made, and probably never will be. It is frankly impossible to combine in one emulsion a microscopic fineness of grain, the greatest possible latitude, the ability to produce very high contrast by sufficiently prolonged development, perfect colour correction, and the utmost attainable speed. That is why there are several different types of film on the market; each represents a different compromise between the various conflicting factors, and each is the best type of film to use for certain purposes.

Roughly speaking, films may be divided into four classes: panchromatic, fast and slow; and orthochromatic, fast and slow. Fastest of all are the fast panchromatic films, of which Agfa ISS, Selo Hypersensitive, Gevaert Panchromosa and Kodak S.S. Pan. and (in 35-mm. only) Super X are typical. Such films as these are essential for snapshots by artificial light, and are invaluable in all cases where the light is not only poor but yellowish as well. In their sphere they are unapproachable, but they can hardly be recommended for general use, as they have a much coarser grain than similar films of lower speed. This can be minimised by special developers, but really fine grain, if attainable at all, can only be had by giving such an excess of exposure that a slower film yielding fine grain without special treatment might equally well have been used.

The medium-speed panchromatic films, of the class typified by Kodak Panatomic, Gevaert Microgran, Agfa Isopan F, Voigtländer Bessapan, or Selo Fine Grain Pan., are probably the best general-purpose films. They combine a very useful speed with an inherent fineness of grain, which, so long as it is not spoiled by wrong development, allows of enlargement to any extent likely to be needed by the ordinary amateur. Owing to their colour sensitivity this speed is fully maintained in yellow daylight and artificial light. The combination of fine grain and good rendering of colour makes this type of film particularly valuable for portraits.

The fast orthochromatic films, such as Selochrome, Voigtländer Illustra, Gevaert Superchrome, Ensign Ultrachrome, Zeiss Ikon Pernox, and Agfa Isochrom, have, in bright daylight, a speed not much less than that of the super-speed panchromatic films, but fall so far behind them in artificial light that they may be slower than even the medium-speed panchromatic class. The grain is about intermediate between that of the two speeds of panchromatic film. For those whose photographs are mostly taken in bright daylight, and who do not wish to make prints much larger than whole-plate, these "chrome" films offer an extremely versatile material. A fine-grain developer is essential, and over-development must be most carefully avoided.

For the very finest grain of all, slow orthochromatic film must be chosen. This is in general not more than half as fast as the medium-speed panchromatic film, but is quite suitable for summer snapshots, and also for landscape and architectural work where a tripod will probably be used in any case. Perutz Leica-Special, Gevaert Fine Grain Ortho., and Agfa Isochrom FF are typical of this class; while the latter firm also makes a slow fine-grain panchromatic film under the name Isopan FF. From these films enormous enlargements, even using a part only of a 36×24 mm. negative, can satisfactorily be made.

The "ordinary" roll film, such as Kodak N.C., Selo, Ensign Lukos, Agfa Isorapid and Gevaert Regular, generally has a coarser grain than the medium-speed panchromatic film, and even in bright daylight is rather slower, while by yellowish or artificial light this difference in speed is accentuated.

Compared with the "chrome" films, the grain is, on the other hand, rather finer in most cases. Films of this class, which have the undoubted attraction of costing less than any of the others, will yield very fine negatives if due allowance is made for their moderate speed in exposing, while the grain is not at all troublesome provided a developer of fine-grain type is used, and the negatives are kept on the soft side by making the development time rather shorter than normal.

A. L. M. S.

Fine-Grain Developers (8).

AN M.Q. BORAX DEVELOPER FOR D. & P. WORK.

THE following developer is taken from an American source, and is recommended as highly suitable for a general purpose semi-fine-grain developer.

Metol	175 grs.	(2.5 grm.)
Sodium sulphite (anhydrous)	4 oz.	(25 grm.)
Hydroquinone	175 grs.	(2.5 grm.)
Borax	4 oz.	(25 grm.)
Water to make	1 gal.	(1,000 c.c.)

The development time for ordinary roll films is about 20 minutes at 65 degrees Fahr. After considerable use development becomes slow; when it is found that films take about 45 minutes to develop at 65 degrees, the developer should be "pepped up" by the addition of half the original quantities of metol and hydroquinone.

This addition may be repeated a second or even a third time, after which the bromide accumulated in the developer will begin to exercise a deleterious effect on the films, and the developer should be replaced by an entirely fresh supply.

Miniature Matters

A selection of readers' queries that deal with "miniature" photography will be answered here every week.

THEATRE PHOTOGRAPHY.

I have read several articles on theatre photography in an attempt to get some idea of the exposures to give. But as various exponents of theatre photography give exposures ranging from 1/500th sec. to about ½ sec., I am left in considerable doubt as to the speed at which to set my shutter when I next go to a theatre. M. L. (*London.*)

The lighting at a revue or a music-hall is generally very much more brilliant than at a play, which may account for some of the discrepancy you have noticed. Even at the same theatre, and during the same scene, figures in white, in the full glare of the spotlights, may only require a tenth of the exposure necessary to give detail over the stage as a whole. In consequence of these variations, definite advice is very difficult to give.

But we have found that 1/20th sec. at f/2 to f/2.9 will generally give fair results over the whole stage if this is really brilliantly lit, and the figures are in light clothes, while single figures in white can generally be caught at 1/100th sec. at the same aperture if in the spotlights. In a dimmer light, or if the stage is poorly lit and the figures are dressed in dark clothes, ½ sec. at f/2 may be none too generous an exposure.

In the figures given above the use of a super-speed panchromatic film is assumed, and you will realise that if your largest aperture is f/3.5 or f/4.5 the exposures will have to be correspondingly increased.

Experience, fortunately, is very quickly acquired, and after a few visits to theatres with your camera you will speedily learn what exposures to give in the different lightings.

U.V. FILTER.

I am going to Switzerland shortly, and expect to make a good many exposures at high altitudes with my miniature camera. Ought I to use a special ultra-violet filter for this work? And if so, what exactly does it do, and why is it better than the usual yellow filter? G. V. S. (*Peterhead.*)

Lenses are not usually completely corrected for ultra-violet light, so that at high altitudes, where such light is plentiful, a slightly out-of-focus image is superimposed on the sharp image formed by ordinary light. The degradation of definition due to this cause is, of course, only apparent in miniature cameras, where considerable enlargement from the original negative is required. The protective U.V. filter cuts out this ultra-violet light, and gives results equivalent to those taken at sea-level with no filter.

If you intend to use a yellow filter, as your question suggests, there is no need at all for the special U.V. filter, since the yellow filter itself will quite satisfactorily absorb ultra-violet light as well as the blue light which it is primarily designed to absorb.

DRYING-MARKS AGAIN.

I have had considerable trouble from drying-marks on my negatives, these taking the form of a white deposit which, though harmless on a dense negative, show quite noticeably in an enlargement from a thin one. I have tried all the usual remedies, including a bath of weak acid before drying, and I always wipe my film free from drops of water when hanging it up to dry. What do I try next? M. V. (*London.*)

We are surprised you have had so much trouble in this connection, but if you give your films two or three changes of distilled water following the treatment with diluted acid we do not see that anything capable of leaving a deposit on drying can possibly remain on the film.

PLENACHROME FILM.

In American publications I have seen references to an Agfa film sold under the name "Plenachrome." Can you tell me whether this film is obtainable in England, and if so where I can obtain it? R. S. (*London.*)

We believe that the "Plenachrome" film marketed in America is much the same as the "Isochrom" film sold in England. Under the latter name it is, of course, to be had from any dealer. But we would warn you to be careful in applying to "Isochrom" film any data you may have for "Plenachrome," since the latter is, we understand, made in U.S.A., and so may be slightly different from the film sold here.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

How I make my EXHIBITION PICTURES

Methods and Ideals of well-known Pictorial Workers.

No. CCCLXV.

Mr. P. A. MEAD.

From information communicated to our Special Representative.

"SOME eighteen years ago I became the proud possessor of an antiquated boxform camera, which aroused considerable desire in me to take pictures of pictorial value. At a later date I purchased a ¼-plate stand camera, and it was with this that most of my earlier work was done. After struggling along for two years or so as a lone worker, I joined a photographic society, where I gained considerable knowledge in the technique of photography.

"My enthusiasm for producing pictures of exhibition standard has greatly increased during latter years, since the introduction of the precision type miniature camera, and the Leica in that respect fulfils all my requirements. I have found that with this type of instrument it is possible to secure many subjects in their natural pose, without attracting attention.

"Before making an exposure I view the subject from various angles to obtain the best composition, and invariably make several exposures from different viewpoints, since the cost of a negative is so small. My negatives are made on Agfa Isopan F and ISS film, and all exposures are made to a Weston electric-cell meter at the film speeds recommended by the makers of that instrument.

"I develop my films in a Correx tank, using one or other of the superfine-grain developers now on the market, chiefly paraphenylene-diamine and glycin, but a definite increase of exposure must be given when using this developer. Particular attention must be given to the temperatures of the solution, intermediate washing (or stop bath) and fixing if grain is to be kept to a minimum. Since it is almost impossible to retouch these tiny negatives, any necessary afterwork I do on the print, but my endeavours are to produce suitable negatives which when enlarged require a minimum of such work.

"I never make contact prints but examine each negative carefully and enlarge those which I think are most suitable, taking great care before enlarging to see that the condenser and lens are free from dust, etc., as neglect of this will mean much time spent in spotting out these small blemishes on the print.

"My exhibition prints are made on Agfa Brovira Paper, 15 × 12, and developed in Agfa Neutol. To obtain the fine tones that this paper will produce it is necessary to develop for a minimum time of 2½ minutes. I find with this paper and developer that most pleasing blacks can be obtained.

"I have benefited considerably by regularly reading the pages of this journal, and since the recent introduction of the miniature section it holds an even greater interest for me and doubtless many others who are 'mini' fans."

(A further example of Mr. Mead's work is reproduced on one of the centre Art pages.)

WE ARE SEVEN. *P. A. Mead.*

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

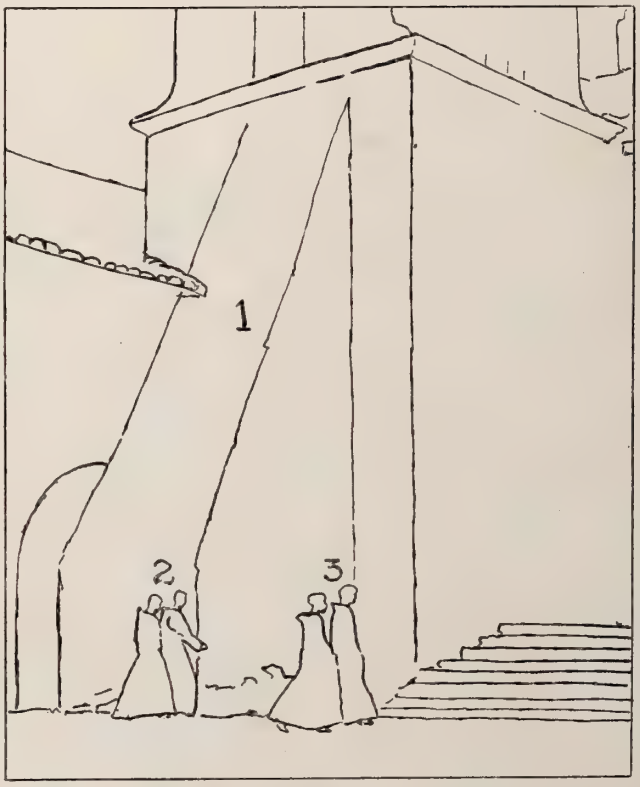
Pictorial Analysis

Every week the picture reproduced on the art page opposite will be analysed in detail for the benefit of readers of the paper who are seeking to improve their pictorial work.

"TO THE SERVICE," *by Hisao E. Kimura.*



THERE is something exceedingly pleasing about the impression of sunshine that is conveyed in this picture. It is soft and mellow, and yet it is not without power and brilliance. It is very satisfying, finished, and most harmonious. The reason seems to lie, in the first place, in the presence of a suitable proportion of shadow tone, and, in the second, in the truth with which the tone values have been recorded.

Only the one façade of the tower and the buttress attached to it are in full light, i.e., if the small amount falling on the steps and ground are excepted. The latter elements are of low local value, however, and, for all practical purposes, the side of the tower is the one bright light, the whole of the remainder being in a low or shadow tone. It is not very heavy, and the only intense darks of any significance are those of the figures.

The light is well modulated, and, with its subtlety of gradation, not only conveys a sense of the texture of the wall, but is freed from the reproach of over-assertion and also has a not inappreciable influence in suggesting mellowness of quality in the sunshine. It is not all the story, for the proportion of shadow tone and the way the light is led up to are contributing factors, but the suggestion would be lacking if the light were deficient either in gradation or a sufficiency of proper tone. As to the way it is led up to or introduced, it will be observed that, in general, the shadow tone adjoining the light is of a moderate value, and the dark note of the two figures on the left-hand side is the only one of any consequence that comes right up against it, the other darks being isolated by an intervening stretch of lighter shadow tone.

Such an arrangement of tone makes for softness and harmony and is a suitable concomitant to the well-modulated rendering of the brightest light, while the great preponderance of tone in shadow heightens its brilliance. The comparatively subdued tone in which the sky is recorded, too, is not without value in enhancing the impression.

But the depth to which printing has been carried is of considerable moment and is indicative of a great nicety of judgment. A little bit more and the print would have appeared degraded and all feeling of sunlight would be lost. A little bit less, and all the gradation in the light would go and with it all its mellowness and quality. In a case of this kind there is little or no margin, and that the most desirable mean has been attained is a tribute to the author's command over technique.

Another important feature on the artistic side is the very fine impression of dignity and height. The dominating lines of the subject material are vertical, and it is to this that the suggestion is due, although, to some extent, the low viewpoint and small depth in the foreground is also responsible. The simplicity of the material and the way it is arranged is also a factor of some significance.

Compositionally, the centre of interest lies in the sunlit façade of the tower (1), but that is a fairly extensive area, and it is more definitely localised in the point (2) where the dark of the two figures comes against it. The light in question is divided into two sections by the triangular stretch of shadow tone, and the presence of the second group of figures at (3) suggests a connection at the lower end. The connection helps to make a good base-line for the triangle, which, with its pyramidal form, does much towards imparting strength to the arrangement.

That strength is emphasised by force of position, the point (2) being well away from both the left-hand edge and the centre of the picture. Insomuch, the composition is very well designed, and a further point that is worthy of notice is that the vertical of the arch on the extreme left has just been retained. The arch is a very minor architectural detail, but, with the retention of its vertical pillar, it becomes a valuable leading-in line that is specially effective in affording an indication towards the principal point of interest at (2). It plays its small part well.

It is a pity, perhaps, that in a work that is otherwise so good the rendering of the figures is impaired by indecision of their outlines. Apparently, the lack of firmness arises from movement of the subject, and it is regrettable that the possibility was not foreseen and guarded against by increasing the shutter speed. It is just possible that the fault could be corrected by careful retouching on the print, but it would be a difficult thing to do, and it would, of course, have been much better if the necessity had not arisen.

SOME CRITICAL COMMENTS on the Beginners' prints reproduced on the opposite page

ON the opposite page this week is a collection of oddments. Most of the prints, in their choice of subject material, betray an inclination towards the eccentric and could, quite correctly, be described as "stunts." But the first consideration of a stunt is that it shall be successfully carried out, and, in too many cases, it has not come off on account of a failure in some respect or other.

Photography and the Stunt.

Whether we are inclined that way or not, a good stunt can be tolerated, once in a while, if it is well and truly done. It must, however, be thoroughly worked out, for any deficiency either in arrangement, technique, or in the transmission of the idea means a total lack of success, and, for another thing, there must be, at least, something of a suggestion of novelty in the impression it is desired to convey.

Possibly the nearest approach to satisfying these qualifications is shown by No. 1, "Casse Noisette," by Wallace Morley, but it suffers from the fact that the setting is unnecessarily restricted, and the way the image is obscured towards the left-hand side seems to indicate a measure of under-exposure.

A more distant viewpoint would have avoided the restriction, and it may be that, had the lighting received a bit more consideration—a supplementary source to illumine the shadow side being provided—the under-exposure might have been counteracted, in which event there would be a probability that the unusual nature of the subject material would have had a chance of making itself felt.

As it stands, it misses its point. It is not easy to make out what the subject matter actually is, and, when that has been determined, the sense of novelty—upon which the presentation depends for its success—has been altogether lost.

Missing the Point.

The position is somewhat akin to telling a funny story in which the tale is so long or so involved that, by the time the end is reached, the beginning has been forgotten, and the point of the joke entirely missed. Told in a short and straightforward way, with no essential omissions, the same story fulfils its intention, and the measure of its success lies with the laughter it evokes.

With No. 1 the subject cannot be seen for its shadow, and therefore, as a stunt, it fails to achieve success. Its intention is too obscure to reach its point; but, with No. 2, "A fellow of a more ungainly make," by N. K. Batchelor, the subject is quite clearly stated, and there is no technical deficiency of any moment. In point of fact, it reaches a very good standard in its class indeed; but, in this case, there is no point to the joke at all, or, put in another way, the subject matter is commonplace and it fails to qualify as a stunt picture because there is nothing in the nature of originality about it.

The title, perhaps, is unusually long, but there is little virtue in that and its meaning is by no means clear.

Clarity of Statement.

The following print seems to represent an explosion amongst a lot of girders, but reference to the title indicates that it is intended to be a representation of "Waverley Station, Edinburgh" (No. 3, by A. Chatham). No doubt, it would be possible to make a study of the station from a height, and for an impression of novelty to be incorporated as well, but such a rendering as this is much too involved to do anything of the sort, and only succeeds in presenting a puzzle.

No. 4, "Pullman Car," by S. Mogridge, is a little better, but it is greatly disfigured by the halation in the upper portion, which seems to suggest a display of fireworks! That effect could have been considerably reduced by the use of either backed plates or anti-halation film, especially if, at the same time, care were taken to guard against over-development.

A much greater degree of clarity of statement is shown by No. 5, "Wintry Sunshine," by J. A. Holdcroft, and, from the point of view of technique, it is as good as No. 2. Moreover, it achieves a measure of success as a stunt because of its originality in choice of material—as far as it goes—but its motive is rather slight, and scarcely sufficient to maintain a more than momentary attraction.

Concentration of Interest.

It is, however, arranged with simplicity, and the sunlit portion is not badly massed. Its intention may be slight, but it does get it across. Insomuch, it compares favourably with No. 6, "My Work Table," by Miss V. Perrin, which, besides including a lot too much in the way of subject matter, also shows a measure of under-printing accompanied by a tendency towards an excess of contrast.

The substitution of a softer grade of printing paper for that employed would correct that tendency, and also permit printing to be carried to a greater depth without losing the gradation of the darker portions. The surplus elements of the subject should be removed, and those that remain should be grouped more closely together with some regard to form or design, in connection with which the remarks in the series by "Ricardo," who has dealt with the subject at length, will be found most helpful.

Some regard, too, should be paid to the lines of the setting, and, as a general rule, a perfectly plain background will be found more suitable in a subject of this nature. Moreover, it is an aid in securing that concentration of interest that is essential if the motive is to be clearly expressed.

Scale and Proportion.

In No. 7, "My Scarf," by Hedley Hodges, again, the setting is unduly assertive and one of more even and deeper tone would be preferable. The scale on which the subject is shown is somewhat too great in its proportions, and could have been corrected by the choice of a more distant viewpoint.

There is also some loss of gradation in the lighter portions which might be adjusted, in another edition, by carrying the printing a shade or so farther. The selection of the material, however, has elements of novelty and from the technical standpoint, otherwise, is by no means bad work. But, with all these prints, it would really be better if more normal subjects were chosen; if they were dealt with as clearly and simply as possible, and, when a reasonable degree of experience has been attained, an excursion into this sphere might then be essayed with a better chance of success. "MENTOR."

With the Beginners

NOTES AND NOTIONS FOR THE LESS ADVANCED WORKER

Every week an article will appear under this heading dealing with a topic of interest to the novice in photography.

SKIES IN ENLARGEMENTS.

THE beginner of years ago was often a long time before he started enlarging, and sometimes he never started at all. The chances were that his negatives would be quarter-plates, and a contact print was quite large enough to see; and some of us used 5×4, postcard, and even half-plate cameras. Nor was the quality of bromide paper much of a temptation to make large prints on it; while with contact prints we had the choice of a considerable variety of printing-out papers, and above all we had carbon and platinotype.

Times are changed. The beginner to-day considers it unnecessarily venturesome and expensive to use anything larger than 3¼×2¼, and he is much more likely to go below it than above it. He naturally comes sooner or later to regard enlarging as a necessity, and he is assisted by the fact that there is a greater variety of enlargers than ever before, and that there is a still greater variety of bromide and chloro-bromide papers of unequalled quality. On the whole it is easier and quicker to turn out enlargements than it used to be to make prints which necessitated the use of daylight for their production. At one time I made a large number of contact prints, and comparatively few enlargements; now it is exactly the reverse.

It is therefore natural for beginners to make enlargements from their small negatives up to about postcard size or even very much larger; and I have noticed that about the commonest fault with these enlargements is an unsatisfactory sky when this feature is included. However satisfactory a print may otherwise be, it is badly handicapped by a large area, or scattered spots and patches, of merely blank paper where there should be sky. As I had often said, there is no sky that can be properly represented by blank paper. Even a faint tone may save the situation, but blank paper never.

Fig. 1.

When this defect occurs it may be possible to remedy it quite easily, or it may be more or less difficult, and in some cases practically impossible. Even the practised worker sometimes finds himself hard pressed to put matters right, and he may have to resort to some complicated method requiring very great skill. I have made one or two tentative experiments to find a comparatively simple method of solving some of these problems, but I have not yet succeeded. I know of a more complicated and very successful dodge, but I am afraid it is rather beyond the beginner.

When subjects do include skies the negatives may be divided into three groups:

(a) The sky prints out properly with the rest of the negative.

(b) The sky is too dense to print out with the rest of the subject, although it is suitable and satisfactory if it has a longer exposure.

(c) The sky may or may not print out, but in any case it is not the best for the subject, so that something different is advisable.

Fig. 1 is an example of class (a). It is a perfectly straight print—no shading or dodging. The sky was gloomy, and did not contain the highest lights; these occurred where faint sunlight fell on white painted vessels and lifebuoys. It is by no means uncommon for the whole range of tones both in the sky and elsewhere to come well within the printable range of densities in the negative, of course assuming suitable exposure and development. It is then an easy matter to find a paper which will reproduce these tones, and there is no trouble with the sky or anything else.

We may note in Fig. 1 that if we had to print-in a sky it would be no easy matter to keep the white yacht and the steamer funnel clear-cut

against it. Some people would print over them, and clean them up with a reducer, but——

Class (b) is a pretty common one. The exposure for the "landscape" part is not sufficient to bring out the sky to its proper depth; the exposure required for the sky is too much for the landscape. The only thing that can be done is to give to the whole print the exposure necessary for the landscape, and then to give additional exposure to the sky only.

This is done by holding a piece of card just in front of the projected image so that it stops any further light from reaching the landscape, and then moving the card up and down while the sky prints out. Some practice is needed to graduate the exposure so that there are no sudden or violent changes in tone.

If the skyline is fairly level the dodge becomes easier; but if objects rise up against the sky they will become darker and darker as they go up, and this will give the game away.

Fig. 2 suggests what can be done in class (c). In this case there were no printable clouds, but the sky was not white. During the exposure for the landscape the sky was shielded with a piece of card moving up and down just at and above the horizon line. The cloud negative was then substituted, and the landscape part shielded with the card again moving over about the same area.

Fig. 2.

This was not an easy example because of the faint grey tones of the distance with which the sky tones had to blend and harmonise.

It is generally recommended to make strip exposures for both landscape and sky separately to find out what each requires. I prefer to make the combination print straight away, and decide from that whether the exposures are right. They go together. An exposure which may look right for the sky alone may not be right when the sky is wedded to the landscape.

In this case I gave 10 secs. for the landscape, and 4 secs. for the sky, and this is the only print I made.

W. L. F. W.

A Beginner's Open Letter to the Editor

SIR,—I have no wish to appear conceited, neither is it my intention to put the writers of those interesting articles "How I make my Exhibition Pictures" in their places; but I cannot resist informing you that I, a beginner, have also achieved what I like to call "My Exhibition Picture."

How I made this picture I cannot tell you; I can only state that one morning, on removing a roll of developed films from my tank, instead of the customary three thick, three clear, and two "no soup to-day," bang in the middle of the strip, without rhyme or reason, was "My Exhibition Picture."

It is a sad fact that my new-found hobby meets with little or no enthusiasm in the home circle, where the only remarks about it have reference to running taps and the use of electricity "on days when it is fine enough to be out of doors."

Now to couple the word "pearls" with that of "swine" might give rise to a totally wrong impression, for I merely wish to insinuate—and I know all photographers will agree with me—that an Exhibition Picture should only be produced at a time and place worthy of its proper appraisement, and I was determined that mine should meet with nothing but the fullest approbation when making its début, and I looked about for a suitable occasion on which to display it.

I have a mother, a dear lady in whose eyes I can do no wrong, and to whom it has ever remained a profound mystery that I am not Prime Minister of England. To this kind soul, then, would I show my Exhibition Picture, and where others might prove unduly critical, or fail to recognise the difficulties with which my photographic path is strewn, my mother would find nothing but praise, and whatever she would say would bring comfort and cheer to me.

Secretly despising myself for thus assuring the appreciation of my picture, I comforted myself with the realisation that only with such encouragement should I eventually aspire to a real Exhibition Picture, and I set about an enlargement with an easy conscience.

I thought that from my V.P.K. negative a postcard size enlargement would be convenient for my mother to take away in her handbag, and would also obviate the probable defects that would come to light in a bigger attempt. I therefore made an enlargement on a postcard, and I thought it very nice indeed.

After tea, just as my mother was leaving, I slipped my picture in her bag and murmured something about its being one of the photographs that I take to amuse myself—"Not quite up to my usual standard I'm afraid, but it is the only one I happen to have with me, you know."

Next morning I called at her flat, thinking it better that I should be quite alone with her whilst the torrent of enthusiasm and praise was unloosed. The moment she saw me it started. "Oh! I *did* love that photograph you gave me yesterday. I have sent it on to Aunt Emily for her to see, too. I do think you are clever; it's ever so much nicer than any of the picture postcards that one buys because it is so *beautifully soft and smooth to write on. . . .*"

For obvious reasons I regret this letter cannot be accompanied by a copy of my Exhibition Picture.—Yours, etc.,

A. A. B.

Those Christmas Cards . . . ?

By T. IREDALE WILLIAMS.

HAVE you finished those Christmas cards yet that you resolved to make this year? If not, what do you expect to do in twenty-four hours? You know what a rush you had with them last year.

(Or am I wrong—were you the one wise man in ten who kept his razor sharp and never let Time have time to grow a forelock to take him by?)

I need not remind you of the multifarious methods of making them; you have doubtless already decided to make them by photography, and being a man of brains have already many ideas that you are toying with, from snow scenes (natural or faked) to toy Christmas trees and Santa Claus complete upon the table top. But if you have decided for table-toppery, be warned in time and take a lesson from my own sad experience of it; believe it or not, but table-toppery has been my ruin.

It was at a time when my finances were even lower than usual, and I was having some little difficulty in persuading my creditors to postpone their pestering, but I had confident hopes of restoring my fallen fortunes by a lucrative marriage, when unluckily my hopes were shattered and my ruin became so certain, all through a mere piece of table-toppery, that I was forced to remove at short notice under cover of darkness, leaving my new address known only to a few trusted friends.

I had thought of a really topping table-top scene for a Christmas card which I was certain would convince people at last what a fountain of brilliance lay concealed in my brain, behind what they in their blindness might think a most unprepossessing façade. The *motif* of this little *chef-d'œuvre* was a Chinese God of Plenty (the fellow with a well-developed tummy), puffing smoke from an opulent-looking cigar and regarding with evident satisfaction the remains of an assortment of decanters and liqueur bottles, with a little Venus (also, of course, well-developed) standing by as cup-bearer, and a sprig of holly to assist the Christmas atmosphere already thick with smoke.

I thought it a jolly good idea at the time, but my so-called friends must have harboured ideas more old-fashioned than I had ever debited them in my most misanthropic moments. In vain did I point out, even to my photographic friends, the excellent development, matched by almost equally excellent exposure; though not merely excellent but divine (and in two religions, moreover) it availed me nothing. Some said it was indecently bibulous; others said it was merely bibulously indecent.

That my critics so contradicted themselves was no consolation for the loss of the lady of my one-time hopes, who was one who gave the latter verdict—or so I must at least assume, for she has never spoken to me since.

After all, that god's tummy *was* a bit lavish.

I can't ask the Editor to show you that Christmas card (I can't even show it him in private, for I destroyed it in chagrin), so instead, here is what I did the next year, when after such an experience I decided to do something more conventional with lots of good wishes and Happy New Years all over. I enlarged a photograph of the baker's boy sliding his sled down Clovelly High Street, painted bits out with process white and bits in with poster black and gave the boy a really happy-looking grin—and you see the result.

This is it.

That, I thought, could offend no one; not even the baker's boy if ever he saw it. It did not; I heard not a murmur of protest, and getting more bold I ventured to my friends' houses to see if they would let me in. That's all they did, though (they didn't even offer me a drink), until someone tactlessly said that it seemed I had given up sending Christmas cards after last year's effort. After some awkward explanations, "Oh, *that*," they said, "I thought it was a tradesman's advertisement. I didn't look at it twice, and I threw it away."

What am I going to do about it this year? I don't know. I expect I shall send a photograph of the children—that always goes down well with the womenfolk.

Oh, I nearly forgot to explain that the table-top incident was many years ago now, and I'm really glad now that I didn't marry that hussy, in spite of all her lucre. The girl I did marry is the girl of my dreams, but she hadn't a bean, and that's how I am reduced to writing for the photographic press in order to stave off the more pressing of my creditors.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

Amateur Cinematography

NEWS, NOTES AND MATTERS OF INTEREST FOR ALL CINEMATOGRAPHERS USING AMATEUR CINÉ APPARATUS.

Dancing Titles

By DAVID CHARLES.

METHODS at present in use of producing animated titles consist mainly of making intermittent, individual exposures, between each of which the details of titles are moved on one place by hand. In the method to be described the details actually do dance about in apparently erratic and certainly amusing fashion upon a platform from which some of them eventually fall.

Fig. 1.—The dancers make their appearance upon the screen. In actual production this is the final stage.

By means of the now familiar device of working backwards with inverted camera from the finale, the details can be made to appear to spring unexpectedly into view, and then to gyrate, singly or in couples, until they finally group themselves, upon the screen, into the form of a message. Nor is the movement of the details entirely outside the operator's control, for it can be stopped in a split-second at any desired moment,

Fig. 2.—The dance in progress. During the dance the "actors" acquire flags carrying letters of the alphabet. In actual production they may be removed at this stage.

when hand-movement with single exposures can be introduced. This might be done, for instance, if the scheme comprised a formal march or other movement of the details as a contrast to the "dance," or if other changes are desired. Nor is the idea confined to the comic figures illustrated. As will be seen, the details which move may be of any form, such as plain simple letters.

The device consists of two parts, the moving details and the platform. The moving details are cut out of corks or of any other substance light in weight. It is worth noting in this respect that cork is most easily cut, like rubber, with a wet knife. Failing a sufficient supply of bottle-corks of suitable sizes, they can be obtained from any large drug-store, or pieces can be cut from mats made both thick and thin, large and small, for bathroom and dinner-table.

The figures illustrated here (Fig. 4) were by no means "carved" out. They consist simply of small pieces cut and glued together, and then painted with a mixture of white and black water-colour "to taste." The eyes are simply black-headed pins, which are obtainable at any draper's, with a painted high-light on each, and the "clothes," when not painted, consist of paper cake-frills and oddments from the rag-bag, stuck on with pins or glue.

The one essential detail, apart from the lightness of their substance, of these figures is that they must be three-legged, and that these legs should consist of stiffish bristles. A sufficient supply of these, if not otherwise obtainable, can be secured (surreptitiously if needs be) from a carpet broom or a whalebone hair-brush. The legs are attached by making holes in the cork with a bradawl, into which the bristles are pushed with a spot or two of Seccotine.

Their actual length, to make the figures stand upright, is best adjusted when the glue is set hard, with a pair of scissors. The "tail-leg" is best painted with some of the black water-colour, when it will not be noticeable against a dead-black background and floor. Those figures which were found over-liable to topple over were ballasted by inserting a fat screw in the lower portion of their anatomies.

The virtue of these bristle legs is that they cause the cork figures to dance about when placed on any vibrating surface. When piano-playing was an essential detail in the education of a Victorian miss, such little dancing cork figures were an article of merchandise.

Fig. 3.—The dancers assemble to give their message. In practice they are arranged in order to start off with. (Note the full-stop, who also flits about the stage as though seeking his master!)

They would promenade, sedately or boisterously, according to the tune, upon the top of the piano. They can be made to dance on a tin tray, by supporting the latter on, say, a glass tumbler and by tapping the tray with a finger or a pencil.

But the vibrating platform, which is the second part of the present device,

Fig. 4.—This explains in detail the construction of the dancers, as described in the text.

provides a means of giving them as continuous a movement as may be desired. It is very easily made. Essentially it consists of a sheet of glass supported on an electric-bell mechanism, but there are several points about the method of suspension which require to be followed out if satisfactory results are to be obtained.

The bell mechanism itself should be a fairly robust one. It is not so much the question of price as of vibration. Some of those sold to-day, especially those mounted in stamped metal or bakelite, have very little vibration. What is wanted is the good old-fashioned wood-mounted bell with a reasonably heavy magnet.

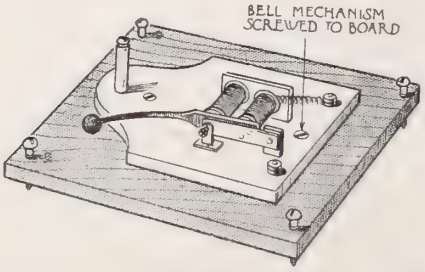

Fig. 5.—The "actuating device" consists of an old electric bell fixed under a small board. A two-inch screw goes through each corner of the board.

The bell itself may be removed but not the clapper. The thing is screwed to a piece of wood the size and thickness of which doesn't matter much, but 8 × 6 of ½-in. wood is suitable. Through each corner of this piece of wood one drives a two-inch screw so that a quarter-inch point projects on the plain side of the board, and the rest of the screw projects on the same side as the bell-mechanism is mounted (Fig. 5). The four screws serve a double purpose, as follows :—

In the first place it is necessary to suspend this "vibration board" in a frame by means of springs. Now the said frame need be nothing more elaborate than an empty wooden box without a top, and the springs may advantageously consist of rubber bands. I say advantageously, because it is so easy to add one or more bands at each corner as a means of increasing the tension to carry the weight of the glass without sagging.

A nail or screw is driven in each top corner of the box, and the "springs" are looped from these to those on the bell-board. The latter should be suspended with the mechanism underneath ; then the four small points will be uppermost, and upon these will loosely rest a sheet of ordinary sheet glass (Fig. 6).

I have purposely avoided giving any actual dimensions, since these may well depend upon the size of wood box available, the glass being advantageously an inch smaller each way than the box, above the open mouth of which the glass, which is the platform proper, will be supported. The glass may be painted black, or any other colour. It is desirable to drive a long screw or nail into the edge of each side of the box, just to prevent the glass riding off in any direction, which it may do if the vibration gets too strong at any moment, or if the device is not absolutely level.

The necessary 4-volt battery to drive the bell-magnet can be inside the box, and can be advantageously connected to a pear-push for the operator to hold. Immediately on pressing the button the vibration of the bell-mechanism will set the glass platform also vibrating, though one doesn't notice it. It is things placed upon the glass which do the dancing, and they do so in all sorts of directions, round-and-round as well diagonally, and they often manage to save themselves from falling over the edge in apparently miraculous fashion.

The "dance" can be started and stopped instantly at any determined moment by means of the pear-push, but it is quite essential that the glass rests upon the four screw-points and not flat upon the board. The thing makes rather much noise when in use, but the results justify the means. Use of this idea is by no means confined to comic figures nor to the dead-black background ; it has many other applications.

Suspending the camera vertically over the platform it becomes possible to make cut-out letters or other details career about "in plan" as for more ordinary title arrangements, always provided that they are bristle-legged, however short the latter. Variations can be made by stopping the vibration at intervals, upon which one or more letters are removed, or their positions judiciously changed.

In the set of "dancers" illustrated, an arm (consisting of nothing more than a pin) holds a double-sided "banner." On one side are the letters which on the screen finally (first, in actual practice) go to compose the title ; on the other side are "any old" letters. This goes to make the assembly into the final message appear all the more mysterious.

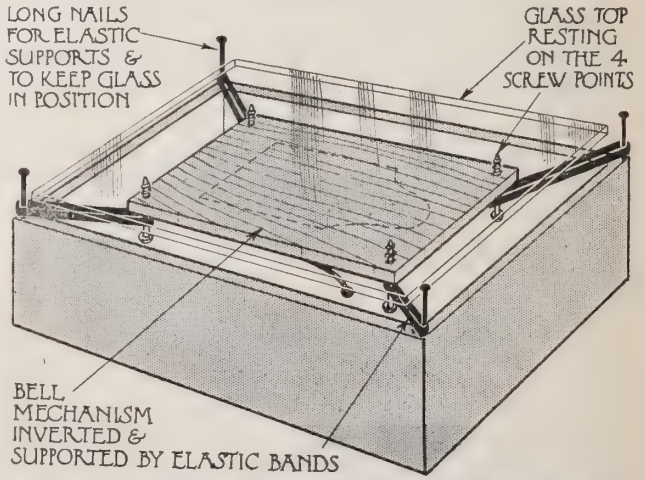

Fig. 6.—The bell-board is tightly suspended by rubber bands from each corner of a box, magnets downwards. Note the screw-points projecting through the board, on which the glass platform rests and vibrates.

The Week's Meetings

Societies will have their meetings announced here if the syllabus is sent to us at the beginning of the session or from time to time.

Wednesday, December 23rd.

Chorley P.S. "Why I Like My Camera." Members.
Coventry P.C. "The Amateur Photographer" Prize Slides, 1935.
Croydon C.C. Season's Outings Prints and Transparencies Competition.
Phœnix C.C. Exhibition Opens.

Thursday, December 24th.

Accrington C.C. I.C.P.A. Prints.
Coatbridge Co-op. C.C. G.D.U. Portfolio.
Kinning Park Co-op. C.C. Question Night.
Oldham P.S. Council Meeting.

Monday, December 28th.

City of London and Cripplegate P.S. Informal Meeting. J. E. Phillips.
Leeds C.C. Members' Chat. "Exposure Meters and Methods of Use."
Liverpool A.P.A. "The Amateur Photographer" Prize Slides.
Luton and D.C.C. Exhibition Preparations.
Oldham Equitable P.S. Lecture. W. Miller.
Preston C.C. Open Date.

NEWS AND REVIEWS

ITEMS OF GENERAL INTEREST FROM ALL QUARTERS.

At a recent meeting of the Council of the Royal Photographic Society the following Associates were admitted to the Fellowship: T. S. Beardsmore (Leicester); W. C. Briggs (London); David Charles (London); G. A. Cloud (London); R. V. Dent (Shanghai); G. Hudson (Brentwood); R. C. C. Hudson (New Cross); James Jarché (London); C. M. Johnston (Canada); Miss D. E. Layard (Southsea); A. Saunders (London); Alex Strasser (London); S. D. Threadgold (Chigwell, Essex); A. J. Woodley (Worcester); C. Waller (Brentwood, Essex). At the same meeting eighty-six members were admitted to the Associateship.

An Exhibition of British Architecture will be opened at the Royal Academy, Burlington House, Piccadilly, on Monday January 11th. It has been organised in order to give a comprehensive view of the subject in all its aspects, from the beginning of this century down to the present day. In presenting this exhibition, the Academy is laying special stress on the personal work of the architect as an artist rather than as a professional man. It will show working drawings to scale, together with perspectives, models, and explanatory photographs. A retrospective exhibition of designs dating from the sixteenth century to the end of the nineteenth, will be shown, and will include designs by Inigo Jones, Wren, Hawksmoor, Gibbs, Chambers, Robert Adam and well-known architects of the nineteenth century. Short addresses in connection with the work shown in the exhibition will be given by well-known authorities. The exhibition should appeal to all readers interested in architectural photography.

The winner of last week's Wallace Heaton competition is R. Moore, 13, Georgeville Gardens, Barkingside, Essex, to whom the award of 21s. has been sent. Particulars of these competitions for "A.P." readers will be found in our advertisement pages every week.

"Photocrimes" is the title of a new book sent to us for notice. Although at first it conjured up visions of certain pictorial photographs produced during the past twenty years, an inspection of the contents proved it to be nothing of the kind. "Photocrimes" is a new game; detective stories in pictures for the reader to solve. It is very well done, and the producers—Mileson Horton and Thomas Pembroke—have been at some pains to provide convincing illustrations. No less than twenty-six crimes—robberies, kidnappings and murders, are presented in pictures with a brief story for each, and they contain all the evidence needed and all that would be available for Scotland Yard. The reader is invited to become a detective and decide whom to arrest. The solutions are printed all together at the back of the book, and if the reader plays fair he will not refer to them until he has solved the problems for himself. A most attractive book. It is published by Arthur Barker, Ltd., 21, Garrick Street, Covent Garden, W.C.2. Price 3s. 6d.

Under the title of "Masterpieces of Photography," the Pictorial Group of the R.P.S. has produced a small book of pictures, containing fifty-six reproductions of prints from the Society's permanent collection. These are in photogravure, and the entire book is excellently produced. It contains an introduction by Mr. J. Dudley Johnston, and the set of pictures that has been selected will be valued by those who have no opportunity of viewing the more complete collection of originals. The book is for sale to non-members of the Society at 5s. 6d. per copy, including postage, and may be obtained from The Publication Department, The Royal Photographic Society, 35, Russell Square, London, W.C.1.

The new volume for 1937 of the Penrose Annual has just been published, and is again a bulky book of fine letterpress and attractive picture illustrations. Mr. R. B. Fishenden, the editor, is to be congratulated on its production, as it well sustains the high standard that has always been associated with this Annual. The general articles, in addition to a very complete editorial review, deal with a great variety of aspects of the printing, processing and engraving trades, particularly those in which colour and photography enter. For this reason it will appeal to many of our readers. The picture supplement, containing a number of examples of modern printing in colour, as supplied by the ink, paper-making and processing firms themselves, are fine specimens of their kind and are worthy of careful study. The book, which bears the sub-title of "a review of the graphic arts," is published at 10s., and is obtainable from Messrs. Percy Lund Humphries & Co., Ltd., 12, Bedford Square, London, W.C.1, postage 9d. extra.

A winter list, attractively illustrated and well printed in photogravure, has been issued by Zeiss Ikon Ltd., Mortimer House, 37/41, Mortimer Street, W.1. It contains particulars of a wide range of Zeiss Ikon cameras, suitable for winter use. All interested readers should apply to the above address for a copy of the book, which will be sent free.

The Service Company, Ltd., of 289, High Holborn, W.C.1, has just issued the Third Edition of their little booklet entitled "Home Movie World." This contains full particulars and illustrations of all modern apparatus and accessories, etc., for amateur cinematographers. It is well illustrated and all items are adequately described. A copy of this booklet will be sent free to any reader of "The A.P." on application to the above address.

FACTS and FORMULÆ

ONE or more items of practical value to the amateur photographer are given under this heading in every issue. They are printed in either the vertical or horizontal form as shown here, and each is complete in itself.

These facts and formulæ are intended to be cut out and pasted on the thin cards of the standard size, 5×3, supplied for card index cabinets.

The collection, when completed, will form a concise guide to photographic practice that every regular worker will value for reference, and for that reason no copies should be missed.

"A.P." filing cabinets have been specially prepared for this card index and are now ready. The size of the box is 5⅛×3⅛×3 and each is supplied complete with a set of alphabetical index cards and 150 cards for pasting on the "Facts and Formulæ." They are obtainable from our publishers, Messrs. Iliffe & Sons Ltd., Dorset House, Stamford Street, London, S.E.1. Price 2s. 6d. post free.

Letters to the Editor

The Editor is not responsible for the opinions of his correspondents.

TWELVE-EXPOSURE FILMS.

SIR,—Apparently some of your correspondents do not know that a small knife can be bought by Leica users with which the film can be cut whilst in the camera (in the dark-room, of course). There is no need to wait until thirty-six exposures have been made.

I always purchase my film in bulk, thus saving more than 50 per cent on my negative stock.

If these points were more generally known I feel sure the Leica would be still more popular.—Yours, etc.,

A. GREENSLADE.

SIR,—I should like to suggest an obvious answer to Mr. Holt's and Mr. Weston's complaints about the necessity of loading thirty-six exposures into the Leica. Let them obtain the cassette which the makers supply for the Leica, and let them buy a five or ten metre tin of their normal stock. They can then load into the cassette, or get their local dealer to load, any length of film they feel inclined, enough for anything between two exposures and thirty-six exposures. I know of no disadvantage to this obvious system, and it is the one Messrs. Leitz had in mind when they made the camera. For some reason best known to themselves, English photographers just refused to use the cassette which the makers up till recently supplied with the camera, so much so that now Messrs. Leitz market the Leica in England without cassette. The economically-minded Englishman prefers to pay 1s. 6d. extra for every thirty-six exposures he uses!

In Germany I have never found anyone who uses a daylight-loading cartridge, and, moreover, in Germany it is unnecessary to buy your own unspooled film, as any self-respecting shop will load you what you need from bulk. I suggest English photographic stores would be doing their customers a valuable service if they would extend a similar facility to Leica users. Still, there's no great hardship in having a ten-metre tin about the place. It will go into one's coat pocket if need be.

Hoping that these notes may be of assistance to your readers.—Yours, etc.,

R. M. COLMORE.

SIR,—With reference to BM/NNHR's letter in the issue of "The A.P." for November 11th, I would like to bring to his and other readers' notice that I have been obtaining short lengths of 35-mm. film regularly from Messrs. Bruce's Ltd., of 28/28a, The Broadway, Ealing, W.5, who fill my own cassettes with 18 exposures of Kodak Super X for 9d. (36 exposures for 1s. 6d.), and will supply any other make of film at the same price.

When I am too lazy or unable to develop my own films they do these short lengths for 9d., and I have always found their work most satisfactory.—Yours, etc., AUBREY E. GOUGH.

YET ANOTHER IDEAL CAMERA!

SIR,—Every enthusiastic photographer at some time or other amuses himself by imagining the camera he would like to own. Some of the inventions are impracticable, and most of them never appear.

I was pleasantly surprised, therefore, when making a suggestion for a new camera to one of the most famous British reflex makers, a short time ago, to find that they had actually designed such a model, but had not put it into production as yet. No doubt it would interest others, particularly as there are foreign cameras sold which have some of its features, but in no case all.

It was (or will be) a true reflex, taking roll film or single plate-holders size 6×6 cm. The films would be enclosed in the body, not in an adapter.

In all other respects, it would be a miniature edition of a 3¼×2¼ reflex, except that no revolving back would be required, that the slowest speed would be less, and that modern provision for changing lenses would be fitted.

The advantages of this camera over those at present available would be:—

Single exposures as well as roll films. Back screen available if necessary. Long extension to copy nearly full size, for nature work, and for long-focus lenses. Rising front; no horrible tilting verticals. Direct finder for use at eye-level.

The difficulties would be:—

Fitting plates in same register as films. (This has been done several times.) Securing a rigid front (even if lazy-tongs were fitted the extra weight would be a small price for the boon of long extension).—Yours, etc., M. K. KIDD.

FINE-GRAIN DEVELOPERS.

SIR,—I understand that one of your readers has had trouble with a fine-grain developer which can be used "repeatedly." Perhaps my own experience would be helpful.

Three 3¼×2¼ panchromatic films have been processed in 20 oz. of a well-known fine-grain developer, with intervals of one week between each film, the solution being kept in a screw-top jar, which, in the first instance, was thoroughly cleansed.

Film 1. Kodak super sensitive pan., 11 minutes see-saw development at 65 degrees (tested by thermometer) and fixed at 65 degrees for 20 minutes. See-saw washed for half an hour in running water. Normal result.

Film 2. Same process, but development time increased to 12 minutes at 65 degrees. Agfa Isopan super-sensitive pan. Pre-fixing rinse at 65 degrees to ensure uniform temperature.

Result.—Beautiful negatives with no trace of anti-halation backing, but slight staining at the edges.

Film 3.—Kodak super-sensitive panchromatic, development increased to 13 minutes at 65 degrees, all other factors the same. Good negatives obtained, but stain increasing from the edges inwards.

Before using the developer for the third film, I noticed that there was a muddy sediment at the bottom of the jar which I took precautions to exclude.

Needless to say, I shall use fresh solution for my next film. Further, I would add that the whole of the solution was used each time.—Yours, etc., J. W. KENNETH.

WHAT IS A MINIATURE CAMERA?

SIR,—I have followed the discussion by Lancelot Vining, R. Schauffelberger, and others, with great interest, on the subject of defining the miniature camera, and I am afraid they are still stumbling at the 6×6 cm. stage. Personally, I fail to see why a small camera should have and occupy a class all on its own, in view of the fact that it is claimed that it will do the work of a micrographic camera to a studio camera. I hope I am wrong in assuming that a definition is sought for the purpose of a cloak of excuse to be draped over all results obtained from negatives below a certain area, something like: "Yes, but look at the size it was enlarged from," for, after all, the final print is the thing to compliment, and not the struggle against odds to obtain it.

If advertisements are to be believed, it is the easiest thing to obtain perfect results from these miniatures, and in my opinion any camera costing something around £40 *should* be capable of producing something that will compare with the finest known photographic results possible and stand being judged on its merits alongside a print made from a larger negative; failing this I can only conclude that the criterion "Results" have been sacrificed simply to make the camera a bit smaller and a bit more attractive.—Yours, etc.,

ALAN D. FOSTER.

AVOIDING CAMERA SHAKE.

SIR,—While reading with interest an article in your paper dated November 4th, dealing with the steady holding of miniature cameras, it occurred to me that the following suggestion would be of interest: That the manufacturers of cameras both large and miniature, made the releases on the same principle as the trigger of an Army rifle with two distinct pressures, one for ready, two for fire. This, I think, would enable the photographer to judge the exact moment for snapping and would help in camera stillness. Anyone who has used such a rifle will appreciate the basis of this idea. The second pressure would, of course, be very light and not move the trigger visibly, but be more in the nature of a squeeze. All this has probably been suggested before.—Yours, etc.,

H. B. SINCLAIR.

Letters to the Editor—*contd.*

POTS AND PANS.

SIR,—I most heartily agree with Mr. Brimble's criticisms of the " Pots and Pans " type of photography, and I would go farther and beg of you to accept the reflection indirectly cast upon your journal, for in this very issue you publish another type of photograph which deserves blunt and severe criticism.

I have been a reader (a very appreciative one) of your journal for more years than I care to count, and if there has been one feature above any other which I have looked forward to from week to week, it has been the one now styled " How I make my Exhibition Pictures." That, and the four pages of Art supplement have made your journal more than worth the money charged. I therefore resent the inclusion in this feature of a photograph (it is *not* a picture !) of such a crude character as " Light and Shade," by M. Broquet. We have all taken better photographs with our first box cameras. The judges may have been sober when they judged it, but they exceeded the licence (a very elastic one at times) which even judges must be permitted on such occasions.

We may not agree with " Mentor," and his " half-inch off " or " half-inch on," at times, but we have the satisfaction of knowing that at any rate he is trying to be helpful, and, moreover, he can and does justify his criticisms, but the authors of pots and pans and of falling lamp-posts and toppling sky-scrapers—well, well ! please Mr. Editor, let us continue to enjoy " Winter Sunshine," by S. Insull, " Aphrodite," by Walter Bird, without having to think, cynically maybe, that sometimes it is the name of the artist that matters and not the alleged art he produces.—Yours, etc., W. H.

SIR,—It seems a pity that the efforts of a highly technical journal like " The A.P." should seemingly have been wasted on Mr. J. " Pots and Pans " Brimble, who appears to buy it for the pretty pictures which appear from time to time.

Regarding his accusation of " lack of imagination " for subjects, surely he is barking up the wrong tree. It is he himself who is lacking in imagination—not the creator of " Pots and Pans." I feel very sorry for Mr. Brimble, who apparently only sees just the bare " Pots and Pans " of a still-life group.

Regarding the subject " In Quiet Waters " (a very beautiful study), the trees and swan must have felt at times as if they were growing in the midst of a battery of typists, judging from the incessant clicking one hears at famous beauty-spots. Also it is a very wearying job waiting for Mr. Swan to swim into the composition. If Mr. Brimble should not understand that I would urge him to study " Pictorial Analysis," by " Mentor."

I hope all the Xmas cards he receives bear those entrancing snow scenes with welcome glow of lamplight streaming through cottage window, and then he should have a Merry Christmas. —Yours, etc., S. CHADWICK.

D. & P.

SIR,—In reply to so many readers' D. & P. grouses, I should like for them to have had the chance of visiting the Bournemouth Mutual Photographic Works, as did the members of the Poole Camera and Ciné Club. This concern is believed to be the only one of its kind in the world. A formation of photographers run this place to produce as perfect prints and enlargements as the material handed to them will provide. They do not give free enlargements, this being one of the reasons they objected to, which led in the beginning to the starting of these works. Printing, developing and enlarging were demonstrated, and I wonder how many D. & P. firms have a scrutinising bench where only the best possible is allowed to pass. The range of paper was very great, and one need only mention the grade wanted, or surface, and it was to be had. I should not think the cost of postage would be considered by those who have had such bad work, and if they should care to give this firm a trial here it is : Mr. J. Thomas, Photographic and Sports Depot, High Street, Poole, Dorset. I have no interest in this concern, other than many thanks to Mr. Thomas, who never seems exhausted in his practical advice on photography. With best wishes to " The A.P." and its readers.—Yours, etc.,

FRANK BARTLETT.

ACID FIXING IN METAL TANK.

SIR,—I note your reply to W. P. M. O. (London) *re* damaged tank.

I think there must be some mistake about this, as I have used acid fixing baths in such tanks (4 to 5 oz. hypo and meta-bisulphite ½ oz., however, for preference) and have never had any trouble with tanks. Ordinary acid baths are not so good as hypo-metabisulphite, so I now use only the latter. Of course, the tank must be properly washed before using developer in it again. Kodak tanks are used with their acid hypo without trouble.—Yours, etc.,

FRANK J. LOBLEY.

Exhibitions and Competitions CURRENT AND FUTURE.

The name and address in brackets indicates to whom to apply for further particulars.

The Amateur Photographer Monthly Competitions for Beginners, Intermediate and Advanced Workers.—Entries, December 31. Rules in the issue of Nov. 25.

Wallace Heaton Special Competitions. Cash prizes every week.—Open to readers of *The Amateur Photographer*. Full particulars in advertisement page in this issue.

Salon International de Fotografica de Madrid. (Señor Secretario de la Sociedad Fotografica de Madrid, Calle del Principe, 16, Madrid.)

U.P. International Exhibition of Photography, 1936 (Lucknow).—Open, December 5, 1936–February 4, 1937. (Dr. K. N. Mathur, D.Sc., Hon. Sec., U.P. Amateur Photographic Association, Lucknow University, Lucknow.)

Royal Photographic Society Sub-standard Film Competition during December. (J. F. Marshall, Hon. Sec., Kiné Group, R.P.S., 35, Russell Square, London, W.C.1.)

Tenth International Christmas Salon of Pictorial Photography (Antwerp).—Open, December 20, 1936–January 3, 1937. (J. Van Dyck, Sec., Fotographische Kring " Iris," Ballaestr., 69, Antwerp.)

Fourth (Third International) Wilmington Salon of Photography.—Open, January 18–31. (Secretary, Delaware Camera Club, P.O. Box 818, Wilmington, Delaware, U.S.A.)

Fourth Scottish Amateur Film Festival, Final Adjudication and Public Show, February 20 ; entries, December 31. (Ian S. Ross, 80, Buchanan Street, Glasgow, C.1.) Cash prizes.

Preston Scientific Society Twelfth Annual Open P.S. —Entries, January 8 ; open, February 1–13. (E. Eastham, 130b, Church Street, Preston, Lancs.)

S. London P.S. 41st Annual Exhibition.—Entries, January 18 ; open, February 13–March 13. (H. S. Adams, 40, Stockwell Park Rd., S.W.9.)

Leicester and Leicestershire P.S. International Exhibition.—Open, February 22–March 14, 1937. (H. Foscutt, 19, Doncaster Road, Leicester.)

29th Scottish National Salon.—Entries, January 23 ; open, commencing February 20. (John J. Robertson, Hon. Sec., Scottish National Salon, Art Gallery and Museum, Perth.)

Ilford P.S. International Exhibition.—Entries, January 30 ; open, March 1–6. (Exhibition Secretaries, c/o 61, Castleton Road, Goodmayes, Essex.)

IVe Salon International Albert Ier.—Open, March 2–16 ; entries, January 31. (M. Roger Populaire, 18, rue de l'Egalité, Charleroi, Belgium.)

Western Eighth Annual Salon of International Photography.—Entries, February 1 ; open, February 20–27 (Russell Town Studio). Also at the Dorothy Café, Esplanade, Weymouth, from March 8–13. (W. H. Hill-Muchamore, 24, Church Road, Redfield, Bristol.)

Runcorn C.C. North-West Cheshire Salon of Photography.—Entries, February 6 ; open, March 10–13. (R. J. Edwards, 1, Waterloo Road, Runcorn, Cheshire.)

Birmingham P.S. 46th Annual Exhibition.—Entries, February 6 ; open, February 27–March 13. (E. H. Bellamy, Waterloo House, 20, Waterloo Street, Birmingham, 2.)

City of London and Cripplegate P.S. Thirty-second Annual Photographic Exhibition.—Entries, Monday, February 8 ; open, March 8–13, 1937. (R. C. Dye, Reservoir View, New Mill, Tring, Herts.)

Hackney P.S. 48th Annual Exhibition.—Forms due, February 9 ; exhibits, March 1 ; open, March 3–6. (W. Selfe, 24, Pembury Road, Clapton, E.5.)

L.M.S. (London) P.S. Twelfth Annual Exhibition, open to Great Britain and Northern Ireland.—Entries, February 12. (Clarence Pursell, Chief Accountant's Office, L.M.S. Rly. Co., Euston Station, London, N.W.1.)

Pittsburgh Twenty-fourth Annual International Salon of Pictorial Photography.—Entries, February 13 ; open, March 12–April 11. (C. E. Lesher (Secretary), Pittsburgh Salon, Box 146, Pittsburgh, Pa., U.S.A.)

Birkenhead Photographic Association Y.M.C.A. Annual Exhibition.—Entries, February 17 ; open, March 9–13. (R. Greenwood, Four Chimneys, Irby, Frankby, Cheshire.)

St. Petersburg C.C. Second Annual Pictorial Salon of Photography.—Entries, February 26 ; open, March 3–17. (R. Kendal Williams, 602, Snell Building, St. Petersburg, Florida, U.S.A.)

Edinburgh P.S. 75th Annual Open Exhibition.—Entries, March 1 ; open, March 20–April 3. (John S. Rodger, 16, Royal Terrace, Edinburgh.)

Brighton and Hove C.C. International Exhibition of Pictorial Photography.—Entries, March 15 ; open, April 14–May 1. (E. K. Robins, Little Toll, Isfield, Uckfield, Sussex.)

Bristol P.S. Third Annual Open Exhibition.—Entries, March 31 ; open, May 1–29, at Bristol Art Gallery. (F. E. Haynes, 50a, Belvoir Road, St. Andrews Park, Bristol, 6.)

Eighth International Salon of Photographic Art (Brussels).—Open daily (except Fridays) from April 3–18. (M. Devaivre, 152, rue Markelbach, Brussels, 3, Belgium.)

Readers' Questions ANSWERED

GENERAL.—All communications for the Editor should be addressed: "The Editor, *The Amateur Photographer and Cinematographer*, Dorset House, Stamford Street, London, S.E.1," and in every case, without exception, must give the name and address of the writer.

CONTRIBUTIONS.—The Editor is glad to consider original, up-to-date manuscripts on photographic subjects. All contributions must be typewritten, or in very legible handwriting on one side of the paper only. Letters or communications arising out of matters already appearing in the paper are not paid for. The Editor disclaims legal responsibility for the safety of matter submitted to him, but he will endeavour to return rejected manuscripts, etc., when a stamped addressed envelope is enclosed. MSS. or prints that are not actually accompanied by a stamped wrapper or envelope can in no case be returned. Reproduction fees for prints are only paid by arrangement beforehand. The sending of a print, without any condition stated, will be taken as permission to reproduce it without fee.

ENQUIRIES AND CRITICISM.—Advice, Criticism and Information are freely given, but the following conditions should be read carefully before applying, as any communication which does not comply with the rules must be ignored.

(1) See "General" above. (2) Every question and every print for criticism must be sent separately through the post, and must be accompanied by a *separate* stamped addressed envelope. No exception can be made in any case to this rule, except so far as enquiries or prints from Overseas are concerned. (3) Neither enquiries nor prints for criticism must be enclosed with competition prints. (4) On the back of each print sent for criticism, in addition to the name and address of the sender, must be the title (if any), and the criticism coupon from the current issue. (5) Enquiries should be clearly written, on one side of the paper only, and should be specific and not general. Such enquiries as "How can I take interiors?" or "Can you give me some hints on outdoor portraiture?" are too general to be dealt with in this section. (6) All envelopes should be distinctly marked "Query" or "Criticism," as the case may be. (7) Prints are sent for advice or criticism on the distinct understanding that by so doing permission is given for their reproduction without fee. We endeavour to deal promptly with enquiries, but cannot undertake to answer by return of post, nor can we give precedence to any enquiry.

A selection of those replies is printed each week, but all questions are answered by post. Enquiries from abroad must contain a coupon also, but it need not be from the current number, and should be cut from the latest issue to reach the enquirer.

Exposure by Artificial Light.

Having used artificial light for portraiture, I am well aware that emulsion speed, lens aperture, distance and angle of main light from subject and general surroundings are all factors that come into consideration in determining exposure. But should not the distance of the camera from the subject be considered? Would not twenty-five times as much light reach a camera at 6 ft. from the subject as compared with one 30 ft. away? And would not the exposure be correspondingly different? I may add that my photo-electric meter confirms this theory.

H. B. C. (Bournemouth.)

The distance of the camera from the subject makes no appreciable difference to the exposure required. It is true that at five times the distance one-twenty-fifth of the light from any given object strikes the lens, but then it is only spread over one-twenty-fifth the area on the film. That your photo-electric meter should indicate increasing exposure at greater distances is understandable, because, as you retreat from the subject, the field of view of the meter begins to include a large amount of unlighted surround.

A Back Number.

I have seen in a recently-published book a reference to an article in the French photographic journal "Photo-Revue," but the issue to which reference is made is dated May 15th, 1925. How can I get hold of a copy of this issue?

S. M. (Staffordshire.)

"Photo-Revue" is published at 118, rue d'Assas, Paris, VI, at Fr. 1.00 per copy; you may be able to get the back number you require. In London you would probably find it in the library of the Royal Photographic Society, 35, Russell Square, W.C. An enquiry sent to the Secretary would give you this information. You may also find it at the Patent Office Library, to which readers are admitted without formality. If you failed there, you would almost certainly find it at the British Museum Library, to which you would only be admitted as a reader after complying with certain formalities.

The Study of Composition.

I should be glad of your advice on the selection of an inexpensive book dealing with composition in photography which is not too advanced for my present ability. I have only a slight knowledge of the simple rules of composition, and have great difficulty in finding subjects which are not commonplace. I obtain a great deal of benefit from your Art pages, but I feel that I require something to supplement them and enable me to appreciate them more fully.

K. R. T. (Doncaster.)

If you apply to Messrs. Sands Hunter and Co., Ltd., 37, Bedford Street, Strand, London, W.C.2, or The Fountain Press, 19, Cursitor Street, E.C.4, they will send you a list of the photographic books they supply, where you will find several dealing with the subject you name. The book by Richard N. Haile, entitled "Composition for Photographers," published by Ensign, Ltd., High Holborn, W.C.1, at 10s. 6d. will probably prove helpful, but we can say quite honestly that we know of no single book that will give you so much information as can be gathered week by week from the study of our pages.

The weekly criticism of the page of beginners' prints is particularly full of the sort of information you are seeking.

Condensation in Projection Lantern.

I have made a "magic lantern" to project slides made from my negatives, but although I have some small holes for ventilation I cannot stop the condenser lenses from "steaming up," making the light too dim. Can you give me some advice as to how I may prevent this from happening?

E. W. H. S. (Hendon.)

It is quite probable that the ventilation of your lamphouse is not satisfactory. In any case, moisture will generally condense on glass when it is much colder than the surrounding air. The simplest course is to wait until the moisture evaporates, though if your condenser is so mounted that it is readily detachable from the lantern you will find that warming it thoroughly before you begin to show your slides will be a complete preventive.

An Old Camera.

At a local jumble sale I purchased, for eighteenpence, an old 5×4 Kodak, the lens of which is marked "Bausch & Lomb Opt. Co. Rapid Rectilinear." The stops appear to be variable from f/4 to f/128. Can you tell me anything about the camera? K. D. K. (Henley-on-Thames.)

The camera you describe is practically out of date, and that is why you got it for so low a price. The chief trouble is the cost of plates or films of this size, but perhaps you are intending to adapt it to take some smaller size such as $3\frac{1}{2} \times 2\frac{1}{2}$. We would point out that the stops are marked according to the U.S. system, on which 4 is not f/4, but f/8, while the other stops follow in the usual order.

Conflicting Data.

In trying to collect data in connection with the proper time of development I find some most perturbing discrepancies. A maker of developers, for example, says that film A should be developed for nearly double the time required for film B. But these films emanate from the same manufacturer, who gives their development time (admittedly with another developer) as identical.

M. L. (Sheffield.)

There is no one correct development time, even for the same developer at the same temperature. For one thing, different emulsions require different times to get the same contrast; and for another, the amount of contrast varies according to the individual requirements.

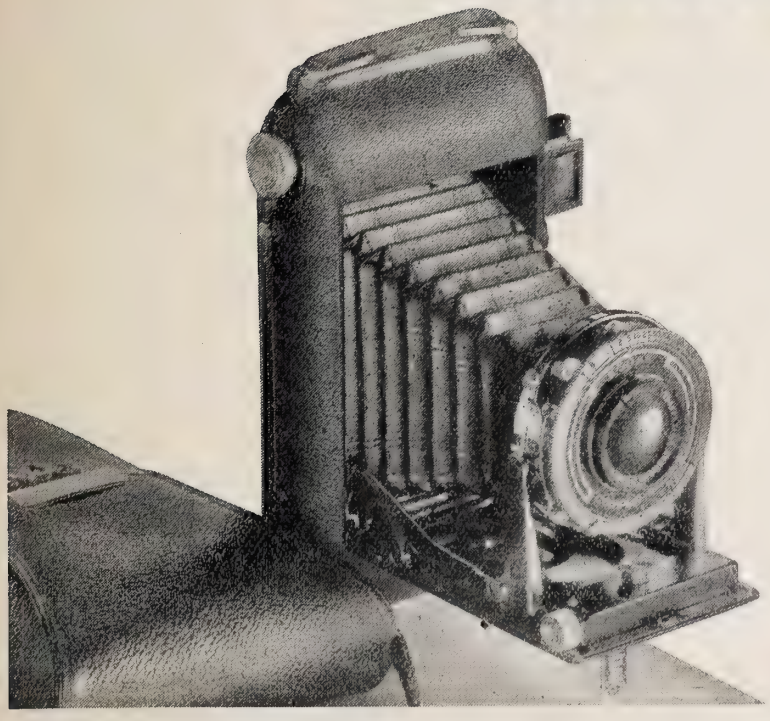
It is on account of discrepancies such as the one you mention that the advice "choose a film, get to know it, and then stick to it" is so often given.

Lighting for Cinematograph Work.

I am going to film some scenes on an indoor "set," using artificial light. With a lens at f/1.9, fairly fast pan. film, and the camera 30 ft. from a set 10 ft. wide, and the main lighting top front, at 6 to 8 ft. from the actors, how much light ought I to use when filming at 16 frames a second?

H. B. C. (Bournemouth.)

Under the conditions you describe we should be a little anxious about possible under-exposure with less than three to five kilowatts of Nitraphot lamps, or about double that wattage of ordinary lamps. If using photofloods we should not like to have less than twelve. But, as you will realise, your exposures can be much less if the actors are dressed for a tennis party than if they are dressed for a funeral.



These suggestions should at least give you data enough on which to make an experiment or two, by which means you will get information much more definite than any estimate could possibly be.

Camera Insurance.

I seem to remember a camera insurance scheme in "The A.P.," and should be glad to have details and forms if there are any. J. S. (Belfast.)

Firms effecting camera insurance are the Norwich Union, with offices at Surrey Street, Norwich, and at 50, Fleet Street, London, E.C.4. Special rates are offered to amateurs in Great Britain and Northern Ireland, and a double premium makes the policy effective everywhere. Messrs. Matthews, Wrightson & Co., Ltd., 52, Leadenhall Street, London, E.C.3, also insure cameras. You might also communicate with Messrs. Wallace Heaton Ltd., of 127, New Bond Street, London, W.1.

Inside only

They're all in the Regent, those camera conveniences that make modern photography such a joy—coupled range-finder; fast lens; masks for 8 or 16 pictures on a spool; "Compur-Rapid" shutter (1 to 1/400th); direct-vision optical finder.

And they're all inside. The Regent has no projecting bits and pieces; it isn't "gadgety." Every part is built into the shapely, streamlined body to make a camera that is beautiful as well as being supremely competent. Price, with leather case, **£20.**

THE Regent

See it at your Dealers' or write for free illustrated leaflet to Mr. A. P. Taylor, Dept. 57B, Kodak Limited, Kodak House, Kingsway, London, W.C.2.

REFLEX-KORELLE

A True Reflex. Coupled shutter and film wind, focal-plane shutter 1/25th to 1/500th, full-size D.V. finder. 12 pictures on $3\frac{1}{4} \times 2\frac{1}{4}$ film.

From **£10 : 10 : 0**

With F/3.5 Victar.

The very wide scope of a Leica

ONE big reason for the enormous following that LEICAS have obtained is their truly notable versatility. Literally, you can do the work of a battery of ordinary cameras with just one compact and handy Leica. Landscapes, seascapes, genre studies, architecture, sports scenes, groups, portraits, distant telephoto work, microphotography—all these, and a lot more, are well within its generous scope. A LEICA, in truth, represents not just one camera, but a dozen.

- Let "the WESTMINSTER" show you how a liberal allowance for your present camera, in EXCHANGE, and Westminster Out-of-Income facilities, can help you in realising your ambition and acquiring a LEICA.

Leicas cost from £16 upwards. Below is shown the Model IIIa, with f/2 Summar lens, automatic focussing, shutter speeds to 1/1,000th sec. at £43, or 9 monthly payments of £5 0s. 4d.

PHOTOGRAMS OF THE YEAR 1937

The Annual Review of the World's Pictorial Photographic Work

Edited by F. J. MORTIMER, Hon. F.R.P.S., Editor of "The Amateur Photographer and Cinematographer"

"PHOTOGRAMS OF THE YEAR," now making the 42nd annual appearance, maintains the high standard of artistic achievement which has characterised it from the first number.

This year's subjects range from everyday scenes and still-life studies to landscapes, portraits and architecture. Beauty, art and technical skill are blended to produce an outstanding volume of photographic excellence.

Keen photographers everywhere will find pleasurable occupation in making a careful study of these splendid examples of the art of the camera, and of noting the latest developments in technique.

MISCELLANEOUS ADVERTISEMENTS

Prepaid Advertisements

THE CHARGE FOR ADVERTISEMENTS IN THESE COLUMNS IS :—

12 words or less.....2/6
2½d. for every additional word.

Each paragraph is charged separately.

SERIES DISCOUNTS are allowed to Trade Advertisers as follows on orders for consecutive insertions, provided a contract is placed in advance, and in the absence of fresh instructions the entire "copy" is repeated from the previous issue : 13 consecutive insertions, 5% ; 26 consecutive, 10% ; 52 consecutive, 15%.

All advertisements inserted in these columns must be strictly prepaid, and reach the offices, Dorset House, Stamford Street, S.E.1, not later than first post Friday for the following week's issue, or one day earlier at the Branch Offices, 19, Hertford Street, Coventry ; Guildhall Buildings, Navigation Street, Birmingham, 2 ; 260, Deansgate, Manchester, 3 ; 26B, Renfield Street, Glasgow, C.2.

Advertisements received too late for one issue, or crowded out, are published in the first following in which there is space. The Proprietors retain the right to refuse or withdraw advertisements at their discretion.

The Proprietors are not responsible for clerical or printer's errors, although every care is taken to avoid mistakes.

Box No. Advertisers

If a Box No. is required, the words "Box 000, c/o 'The Amateur Photographer'" should be included in the charge, and an additional 6d. sent for registration and cost of forwarding any replies.

Letters addressed to box numbers are simply forwarded by us to the advertisers. We do not deal with the correspondence in any other way, nor accept any responsibility in connection with the advertisements.

Deposit System

Readers may deal in safety through our Deposit System. Purchase money should be deposited with "The Amateur Photographer and Cinematographer," when both parties are advised of its receipt. The time allowed for decision is three days, counting from receipt of goods, after which period, if buyer decides not to retain goods they must be returned to sender. If a sale is effected, buyer instructs us to remit amount to seller, but if not, seller instructs us to return amount to depositor. Carriage is paid by the buyer, but in event of no sale, and subject to there being no different arrangement between buyer and seller, each pays carriage one way. The seller takes the risk of loss or damage in transit, for which we take no responsibility. For transactions up to £10 a deposit fee of 1/- is charged ; over £10 and under £50, 2/6 ; over £50 and under £75, 5/- ; over £75 and under £100, 7/6 ; over £100 one-half per cent. All correspondence must be sent to Dorset House, Stamford Street, London, S.E.1.

Cheques and Postal Orders sent in payment for deposits or advertisements should be made payable to ILIFFE & SONS LTD., and crossed **& Co.**

Notes being untraceable if lost in transit should not be sent as remittances.

IMPORTANT NOTICE

Owing to the Christmas Holidays, the next issue of "THE AMATEUR PHOTOGRAPHER" (dated December 30th) must be closed for press earlier than usual.

In accordance with the notice that appeared last week, the latest date upon which MISCELLANEOUS ADVERTISEMENTS could be accepted for the above issue was

FIRST POST, WEDNESDAY, DECEMBER 23rd.

WALL'S DICTIONARY OF PHOTOGRAPHY

AND REFERENCE BOOK FOR THE AMATEUR AND PROFESSIONAL PHOTOGRAPHER

Edited and largely re-written by F. J. MORTIMER, Hon. F.R.P.S.

Fourteenth Edition Thoroughly Revised

A complete reference work for the practical photographic worker. It provides useful information in dictionary form on every phase of photography—technical, pictorial, scientific and general, and is in itself an explanatory index to all terms, formulæ, etc. All the latest photographic principles are incorporated in the present edition, which includes up-to-date information on all recent developments.

EVERY CAMERA USER SHOULD GET A COPY NOW!

The Amateur Photographer

DIARY

and Handbook for 1937

This useful little handbook contains, in addition to the usual diary pages—one week to the page—over fifty pages of facts and formulæ for the keen camera user. Information is given on developing, fixing baths, mountants, and finishing negatives and prints. Numerous reference tables dealing with hyperfocal distances, enlarging, screen distances for lantern projection and exposures are included, as well as sections for exposure records and personal memoranda.

Size 3⅛×5⅜ inches, well printed, neatly and strongly bound in leather cloth, with back loop pencil and round corners.

I want to help you

Dear Amateur Photographer,

May I wish you every success in your hobby of photography, both during this Christmas season and during the New Year.

During 1936 I have tried to give all of you, and particularly "Minicamera" users and Ciné enthusiasts, new ideas, greater expert assistance and exclusive service. Our Insurance scheme for "Minicameras" was enormously successful; so were our 2d. "Automax" enlargements. A new one, 2½d. for 3½ square from Rolleiflex, is now coming along.

I am now concentrating on making your hobby easier still and less expensive. Everyone wants the best, and the best is sometimes expensive, but even expensive apparatus, if spread over a sufficiently long term, can be within the reach of everyone. Cameras or Ciné apparatus at medium prices can now be paid for over fifteen months, and the dearer models over two years if desired. Look what it means. The marvellous Rolleiflex which wins the big £2,500 and £3,000 prizes may be had for about six shillings a week. The stately Leica or Zeiss Contax with all their wonderful gadgets for night photography from ten shillings a week, and you use the camera while you pay for it.

The same applies to Ciné projectors for the winter evenings. We are just as much specialists in Ciné as we are in "Minicameras." Our ciné theatre is probably the finest dealer's theatre in the world.

All my staff are carefully chosen and experts at their job. They all use the cameras they sell, and whether you want to buy now or not I will, with their assistance, give you any advice on technical matters you may want, always willingly, and with the feeling I am giving you real "help" in your hobby.

Look out for future advertisements of mine. Send me your photographs for our competitions, and write to me *personally* whenever you want advice or assistance. I shall be delighted. I am always at the service of the amateur photographer.

Wallace Heaton

WALLACE HEATON LTD., 127, NEW BOND STREET, LONDON, W.1

NIGHT PHOTOGRAPHY INDOORS

SELO LIGHTING SET

The Selo Lighting Set is of superior design and of especially strong manufacture and comprises an extra large spun aluminium reflector mounted on a solid stand, complete with Photoflood Lamp, 3 yards of flex and universal connecting plug. Price **17/6** Obtainable from all photographic dealers.

No longer must your camera be put away to "hibernate" during the winter. With the arrival of the long dark evenings it now offers you a new fascination—photography by your own fireside—picture-making in the comfort of your own home.

Ilford research, culminating in the introduction of reliable hypersensitive films and plates, has made this possible. Now, it is as easy to "snapshot" at home by night as outdoors on a sunny day, and to every camera user is opened up a vast new field of photographic enjoyment.

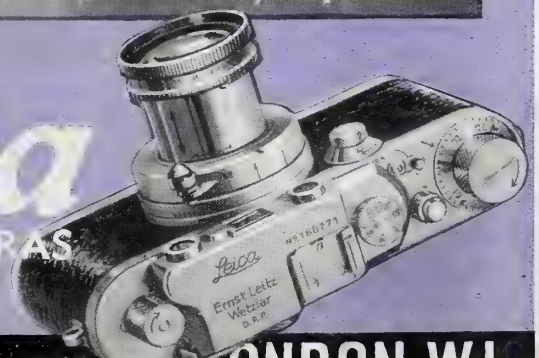
The Journal for Everybody with a Camera

Vol. LXXXII. Wednesday, December 30th, 1936. No. 2512.

A Leica "still" from the Gainsborough picture "Everybody Dance"

THE FASTEST OF DANCES

SNAPPED BY ARTIFICIAL LIGHT



WITH THE

Leica

KING OF CAMERAS

The remarkableness of this photograph can only be fully appreciated when it is realised how fast is this fastest of Russian dances. This picture was taken at F/2 with a speed of 1/200th second. It could only have been accomplished by a very remarkable camera.

Ask your Leica dealer to demonstrate the full possibilities of Leica photography, or write for illustrated literature to

E. LEITZ (LONDON), 20, MORTIMER STREET, LONDON. W.1

Copyright—Registered as a Newspaper for transmission in the U.K.

This unusual picture was taken at one of the last displays to be held at the Crystal Palace before the recent disastrous fire. The camera was a Kodak "Regent"; the film, Kodak Super Sensitive Panchromatic; the exposure, 1/25th second at *f*4.5.

This film works 24 hours a day

The 24-page Kodak Night Photography Booklet gives many examples of after-dark pictures, indoors and out, together with exposure details and other useful information. Ask your Kodak Dealer for a copy or write to Mr. A. P. Taylor, Dept. 57B, Kodak Ltd., Kodak House, Kingsway, London, W.C.2.

Fireworks or firesides, floodlit buildings or baby in the bath—it's all one to Kodak "S.S. Pan." *Every* kind of after-dark photography, outdoors and in, is made easier by the lightning speed, extremely high sensitivity to artificial light, and really effective anti-halation qualities of this Super film.

ONE WEEK ONLY—FREE CRITICISM

OF "MINICAMERA" NEGS.

SEND YOUR BEST NEGATIVE FOR FREE CRITICISM AND ADVICE

Continuing our policy of giving a really comprehensive service to the amateur, we are, this week, offering free constructive criticism by our experts. Beautifully composed pictures, correctly exposed, are often ruined in after-treatment, just as "shots" nearer the border line can be improved by "nursing" in development and enlarging. Highly qualified advice often means the turning point in a beginner's work, and the more advanced photographer, too, sometimes needs a word or two by way of encouragement or constructive criticism. None of us are too old to learn, particularly in this comparatively new hobby the miniature camera has given us. All you have to do, if you are not registered on our books, is to enclose the coupon, duly filled in, with your negative, and send, preferably by registered post, to

ANOTHER INTERESTING PHASE OF WALLACE HEATON'S COMPETITION

"ARCHITECTURAL SUBJECTS"

All entries for "ARCHITECTURAL SUBJECTS" must be sent in between JANUARY 21st and 27th.

Any amateur may enter, using any camera, and his own choice of materials.

There's scope for some really good shots in this week's subject. Cathedrals, churches, town and village streets, castles, bridges, etc., all come under the architectural category. The particular place or building will have no bearing in the final judging, *only good photography* will win the prize.

Each week we give one guinea for the best picture received—each week we give you a different subject. Everybody has an equal chance of winning a prize, as well as selling us his picture for two guineas. After three months all pictures received will be judged for the final first prize of £25 cash. There are no restrictions with regard to make or size of camera or materials used, and it doesn't matter where your negative was developed and printed. Either contact prints or enlargements up to 15×12 in. (mounted or unmounted) are eligible, but not less than 8×6 is recommended. No retouching or faking is permitted, except simple spotting to remove defects.

WALLACE HEATON COMPETITION

THIS COUPON which must be affixed to the back of each entry, is valid for any week until Competition closes on March 31st, 1937.

21/- AWARDED FOR EACH WEEK'S BEST PICTURE

£25 FOR THE BEST SENT IN DURING WHOLE COMPETITION

We give you four clear weeks to prepare your entries. All entries for the "Architectural" Competition must be sent in between January 21st and 27th. The complete series ends on March 31st, 1937, when the big cash prize winner will be chosen. An additional 21/- will be awarded to prize-winner if his enlargement was made by us. For photographs which appeal to us, not necessarily prize-winners, we reserve the right to purchase the copyright and negative by payment of £2 2s.; in the case of weekly prize-winners, by the payment of an extra 21/-. The copyright and negative of the £25 prize-winning print must be made over to us without further payment. Acceptance of the rules is a specific condition of entry. The remaining nine weekly subjects for this competition are: Winter Sports; Quick-action Pictures; "New Angle" Shots; Birds, Animals, etc.; Indoor Portraits; Flowers; Figure Studies; Boats and Seascapes; Pictorial Subjects.

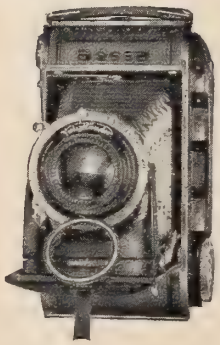
Why not prepare your entries in advance?

ADDRESS YOUR ENTRIES TO "ARCHITECTURAL" COMPETITION,

WALLACE HEATON Ltd., 127, NEW BOND ST., LONDON, W.1

NEW EASY TERMS—

The new plan by which you can get the finest apparatus easier than ever you thought it possible.



You can buy anything over £5 on 24 monthly payments, or anything we sell on 15 or 24 monthly payments.

Start using your apparatus after paying the first instalment—even a Standard Leica only costs you 15/3 per month.

FILMS OF THE FUTURE

It is our opinion that while, by reason of the optical problems involved, the light-passing capabilities of photographic lenses are not likely to be greatly increased, practically no limit can be set on the possibility of increases in negative sensibility. Chiefly owing to endeavours stimulated by the existence of the cinematographic industry, we may hope one day to be able comfortably to snapshot at 1/1,000th of a second at, say, f/3.5, in artificial light. Although this period may be far removed we can, however, report very considerable advances towards this ultimate goal for the coming season. In the first place, Messrs. Agfa are introducing a panchromatic film having a Scheiner speed of 34 degrees. Fine grain is as desirable a factor as sheer speed, and in the new year a film equal in fineness of grain, it is claimed, to Agfa FF, but having a Scheiner speed of 30 degrees, will be marketed. Great developments in colour photography have been taking place, and both Messrs. Agfa and Perutz will be introducing comparatively fast colour films, while within the next few weeks Kodachrome will be first available for the miniature camera. All these great advances in the chemical side of photography will be, of course, as in the past, first available to users of 35-mm. film. The future of photography, in fact, is with the miniature camera owner.

We should be pleased to take any existing instrument, particularly miniature cameras, in part exchange for a Leica.

Leica IIIa, f/3.5 Elmar.....£34 0 0
Leica IIIa, f/2 Summar.....£43 0 0

We are England's Leica dealers. Besides the cameras themselves, we stock, and should be glad to demonstrate, all the auxiliary scientific apparatus, copying equipment, projection apparatus, etc., that go to make the Leica the "universal" camera.

Our Leica service is in every way unique. We are the only firm organised exclusively to process the 35-mm. film used in the Leica. Many famous amateur and professional workers, lacking the time to do their own processing, send their films to us. We issue for the convenience of our customers special postal bags for use when sending films to us, as well as film speed charts, and specially designed order forms for use when selecting negatives for enlargement from 36-exposure film. The publication "Leica News and Technique" is sent monthly free of charge to all Leica users who register with us their names and addresses. In addition, we are glad to send to all Leica owners, or to those interested in Leica photography, the latest Leica literature whenever this is issued.

Some Leica booklets, any of which we shall be pleased to forward on application:—

"Leica Enlarging Equipment."
"Interchangeable Lenses for the Leica."
"Special View-finders for the Leica."
"Copying Equipment for the Leica."
"Auxiliary Reproduction Devices."
"Filters for the Leica."
"Developing and Printing Appliances."
"The Leitz Telyt Lens."

THE FOLLOWING LIST REPRESENTS A VERY SMALL SELECTION OF OUR GUARANTEED SECOND-HAND MINIATURE CAMERAS AND ACCESSORIES, ALL OF WHICH ARE SUBJECTED BEFORE RESALE TO THE MOST CAREFUL TESTS. OUR USED MINIATURE CAMERAS MAY BE PURCHASED WITH THE SAME DEGREE OF CONFIDENCE AS NEW ONES, THE PURCHASE OF APPARATUS FROM US IS AT ALL TIMES A GUARANTEE OF ITS MECHANICAL AND OPTICAL PERFECTION.

Leica 250, f/2 Summar lens, ever-ready case. Cost £57. Excellent condition.....£40 0 0
Leica Model III, black, f/3.5 Elmar, case. As new £23 15 0
Leica Standard Model, f/3.5 Elmar, ever-ready case. Excellent condition.....£11 17 6
Leica Model I, interchangeable, f/2.5 Hektor, case. Good condition.....£10 17 6

Other Miniature Cameras fitted with coupled range-finders:

Nettax (only a few weeks old), 2 filters, ever-ready case. As new. Cost £34 10s.....£26 10 0
Super Nettel, f/2.8 Tessar, case. As new....£17 10 0
Dollina II, f/2.8 Tessar. As new.....£13 17 6
Voigtlander Super Bessa, f/4.5 Helomar lens, filter, Compur Rapid. As new.....£12 10 0
Super Ikonta 530/16, f/2.8 Tessar. As new..£20 0 0
Super Ikonta 530/2, f/3.8 Tessar, Rapid Compur, ever-ready case. As new.....£17 17 6
Super Ikonta 530/2, f/4.5 Tessar, Rapid Compur, case. As new.....£13 18 6

Other Miniature Cameras fitted with coupled range-finders—contd.:

Super Ikonta 530/2, f/4.5 Tessar, normal Compur, case. As new.....£13 0 0
Plaubel Roll-Op, fitted f/2.8 Anticomar lens. As new £15 15 0
Weltur, f/2.8 Xenar, ever-ready case. As new £14 17 6
Kodak Regent, f/3.8 Xenar, ever-ready case. As new £15 10 0
Peggy Chromium Model II, only a few weeks old, fitted coupled range-finder, f/2 Xenon lens, three cassettes, two filters. Cost £40. As new £27 10 0
Peggy Model II, f/2.8 Tessar lens. Cost £32. As new.....£21 10 0

MINIATURE REFLEXES:

10.5-cm. f/4.5 Xenar Telephoto, for Reflex-Korelle. As new.....£5 18 6
Reflex-Korelle, f/2.9 Radionar, ever-ready case. As new £10 10 0
Ikoflex I, f/4.5 Novar, Derval shutter. As new £5 17 6
Welta Superfekta, f/2.8 Tessar, 2 filters. As new £18 10 0
Exakta Model C, latest lever wind, f/2.8 Tessar, 3 slides and focussing screen. As new.....£24 10 0
Exakta Model B, f/2.8 Tessar, ever-ready case. As new.....£21 10 0
Exakta Model B, f/3.5 Tessar, case. As new £17 10 0
Exakta Model A, latest lever wind, f/3.5 Exaktar £11 15 0
Exakta Model A, f/3.5 Tessar. Excellent condition £13 17 6
Exakta Model A, f/2.9 Xenar. Excellent condition £12 17 6
6-in. f/5.6 Dallon Telephoto, for Exakta. As new £6 10 0
Reflex-Korelle, improved shutter, f/2.8 Tessar. As new.....£15 10 0
Pilot, f/3.5 Tessar, Compur. Excellent condition £11 17 6
Automatic Rolleiflex 6×6, f/3.5 Tessar, Rapid Compur, case. As new.....£19 17 6
Automatic Rolleiflex 6×6, f/3.5 Tessar, Compur, case. Excellent condition.....£15 15 0
Automatic Rolleiflex 4×4, f/2.8 Tessar, case. As new £15 15 0
Automatic Rolleiflex 4×4, f/2.8 Tessar, Rapid Compur, case. As new.....£19 17 6
Rolleicord, f/3.8 Triotar, ever-ready case. As new £11 7 6
Rolleicord II, f/4.5 Triotar, ever-ready case. As new £11 10 0
Rolleicord II, f/3.5 Triotar, ever-ready case. As new £12 17 6

MISCELLANEOUS:

Ermanox, for V.P. Plates, f/1.8 Ernostar, focal-plane shutter, 6 slides and case. Good condition £10 0 0
Voigtlander Perkeo, f/3.5 Skopar, Compur shutter. Excellent condition.....£5 15 0
Wirgin, for 16 exposures on 3¼×2¼ film, f/3.8 Trioplan, Rapid Compur. As new.....£5 5 0
Kodak Pupille, bought new six weeks ago, f/2.8 Tessar, case. Unsoiled in any way.....£12 10 0
Dolly, for 8 or 16 exposures on V.P. roll film, f/3.5 Trioplan, Compur shutter. As new.....£4 2 6
Beira, for 24×36 mm. negatives, f/3.5 Trioplan, Compur £7 19 6
Foth-Derby, f/3.5 lens. Excellent condition..£3 12 6
Minifex, f/3.5 Trioplan, Compur, case. As new £5 12 6
Ensign Autorange, fitted f/4.5 Ensar, Compur shutter, case. Excellent condition.....£7 15 0
Foth-Derby, f/2.5 lens. Excellent condition..£5 5 0
Voigtlander Virtus (16 on 3¼×2¼), f/3.5 Skopar. Excellent condition.....£6 5 0
Ikonta 520, f/3.5 Novar, Rapid Compur. As new £6 10 0

VOL. LXXXII. No. 2512.

TOPICS of the Week

AS this is the last issue of "The A.P." for 1936 we take the opportunity of wishing all our readers a Happy and Prosperous New Year in 1937. There is every indication that photographic interest, enthusiasm and activity are on the up-grade, and we look forward to a period of great activity and progress along the lines that have already been indicated during the past six months. We must also take this opportunity of thanking those many readers who have so kindly sent us greetings for Christmas and the New Year, and can assure them that we heartily reciprocate their good wishes.

"Some" Presidential Address.

The present writer must have listened to at least thirty presidential addresses at the Royal Photographic Society, but never one quite like Dr. Spencer's, which was delivered at a crowded meeting of the Society last week. At least, he didn't hear it, for the address was never delivered. Dr. Spencer began to speak at 7 p.m. on the subject of colour cinematography. Having by 9 p.m. concluded his preliminary observations—it is due to him and to his audience to say that never have two hours passed so quickly—he was proceeding to open his presidential address proper when, glancing at the clock, he realized that if he were to carry it through it would keep his audience well into the next day. What the audience did hear was a first-rate exposition of the various methods of colour cinematography, additive and subtractive, and they saw short strips of films representative of most of the processes present and past. Dr. Spencer's general conclusion was this, that the data are not yet available on which to judge whether any one of the present processes is more likely to survive than any other. The additive systems were cheaper, but they had the drawback that they required more light for their successful projection than was at present available; that, however, might not be such a drawback in a few years' time. The subtractive processes certainly started off with the fact that they could be projected with the same amount of light as black-and-white, but against that it was much more difficult to get the negatives and much more difficult to get a satisfactory print from the negatives. This rather negative conclusion, however, in no way spoiled a discourse which was informing and entertaining throughout—and the presidential address itself is yet to come.

"GOOD-BYE, OLD YEAR."

December afternoon in Kew Gardens.

Suburban Tragedy.

Why do the most ambitious efforts of suburban amateur ciné societies run so often to tragedy? We have recently seen two of these productions, one from the Brondesbury Society and the other from Beckenham, in both of which the photography was first-class. Some of the scenes were the interiors of small houses, and the lighting was so perfect that one was hardly conscious of the fact that they were interiors, which is high praise. But in both cases the sombre note was struck. In the Brondesbury film, "Consider your verdict," the theme hovered between suicide and murder, a brutal husband, an erring wife, a tempestuous lover, a note to the coroner, a motor-car accident—but was it an accident?—and back again and again to the judge dispassionately summing up to the jury. In the Beckenham film we had an

excellent representation of an air raid, of the nervous affliction of a child in consequence of the horrors of that night, of her recovery after many years, of contact with rumours of fresh wars and the present preposterous world as we know it, a recurrence of her symptoms, and her decline into a hopeless nervous wreck. It is a question whether this type of film can ever convincingly be made by amateurs.

The Record Breaker.

A film that travels at twice the speed of an express train, and a spool centre that rotates 250 times a second, must be regarded as a modern marvel. One of the outstanding exhibits of the Exhibition of Cinematography at Russell Square was one that wasn't there—that is to say, it was represented by photographs of itself, but it requires four strong men to lift it, and a lorry to carry it, so it can hardly be described as portable. But we were told that it is designed for a maximum speed of 3,000 pictures per second, and we were shown a "short shot" of a marble falling into a tank of water, the time occupied by the actual event being three-fiftieths of a second, but it comprised 1,400 pictures, and even so it was the result of the camera working only half its maximum speed. Photographically, the only problems are to obtain the exposure and to time the object to the passing of the film. The exposure is obtained by starting to expose the next frame while the previous one is still completing its exposure. This is done by a continuously moving film and a ring of lenses rotating in front of it at a slightly slower speed. Timing is done by an electric contact.

"Verboten."

The experience of a British photographer with the Nazi police seems worth recounting. Inadvertently, in one German city the photographer had included in his picture a Jewish shop which was closed. Actually it was closed on account of a Jewish holiday, but evidently the police suspected that a picture of a shuttered shop with a Jewish name outside might be used in this country as further evidence—as though any were needed—of the persecution of Jews in Germany. In the result the photographer was marched off to the police station. Here the photographer freely surrendered some film, and this thirty feet or so completely changed the spirit of the police towards him, who proved themselves excellent fellows, did not search him, although he had a good deal of film in his pockets, joined with him in coffee and cigarettes, and sped him on his way with their blessing. Incidentally, it appears to be just as well, when in Germany, if one ever has occasion to refer in speaking to one's companions to a very notable figure whose face is postered all over the country, to speak of him as "Mr. Smith."

READERS' PROBLEMS

Selected queries on topics of general interest to readers will be fully dealt with under this heading week by week. Other replies appear as usual on the last page.

Wooden Dishes.

Being pretty good at woodwork, I am thinking of making some wooden dishes for enlargement work. Do you consider them sufficiently reliable to be worth making? If so, can you give me a hint or two on construction and finishing? S. J. (Leek.)

Taking everything into consideration, including the cost and durability of other forms of dishes, we think it would be well worth your while to make a set of wooden ones, especially if they are to be of somewhat large dimensions. If properly constructed and used with reasonable care they have a long life.

Well-seasoned oak is a suitable wood, but, as you are no doubt aware, there are plenty of satisfactory alternatives. Freedom from shakes or knots is a point to be noted.

The components are simply a rectangular frame and a one-piece bottom. The lengths of the four sides of the frame must be calculated so as to give sufficient margin for the size of paper to be used, and the width and thickness will vary according to the size of the dish. Thus the width may run from 1 in. to 2 in. or so, and the thickness from $\frac{1}{4}$ in. to $\frac{3}{8}$ in. The thickness should be sufficient to ensure rigidity.

Corners may be tongued and grooved, but in our opinion a plain butt joint is quite satisfactory. A little lead paint is better than glue, and the joints should be well screwed, the screws being countersunk and the heads covered with hard filling. For the bottom nothing is better than plywood, screwed on in a similar way, with the edges flush with the sides. The whole job should be smooth, tight and true throughout.

The working in of paraffin wax by heat is often recommended. We think such treatment as the following preferable. Apply a thin coat of lead priming over all, and rub down with fine glasspaper. Then give a coat of anti-sulphuric enamel, Brunswick black or good cellulose enamel, working well into all corners, and including the whole of the surface. Leaving the bottom untreated is a mistake. Give three coats in all, allowing each to harden thoroughly before applying the next.

If cellulose enamel is used distinctive colours can be applied so that the dishes shall be reserved for one purpose only. We advise a set of four—developing, fixing, and two for washing. The developing and fixing dishes should be thoroughly rinsed out, and all dishes drained and dried before being put away. A further thin coat of enamel when required will prolong the life of the dishes indefinitely.

Testing Shutter Speeds.

Can you tell me what is the way of testing shutter speeds with the aid of a gramophone? D. A. (Lancaster.)

There are several ways, and we can only outline one of them briefly, leaving you to modify it if you choose. It does not apply to focal-plane shutters so much as to the usual diaphragm type.

Near the circumference of the revolving table fix a bright metal ball, say the size of a pea. If the test is made at night a small electric bulb with battery is fixed instead. In either case the object is to get a bright track on the negative, the length depending on the exposure given. For speeds from 1/5th to 1/100th of a second, a suitable rate of revolution is 120 per minute. The rate should be timed for two minutes with a watch to get the exact number.

The angle through which the bright spot has travelled can be measured on the negative by means of a protractor; it is not necessary to make a print. If R stands for the number of revolutions per minute, and A for the number of degrees in the angle covered, the formula is:

$$\frac{60}{R} \times \frac{A}{360} \quad \text{or} \quad \frac{A}{6R}$$

If the result is worked out to three places of decimals it gives the fraction of a second very accurately.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

Some Useful Photographic ANNUALS

By E. APPLEBY.

A great number of "Annuals" make their appearance at this time of year and they relate to every possible subject. Reference is made in the following note to those Annuals that particularly appeal to photographers.

EACH year the photographer is presented with a choice of several useful annuals published in this country, which will help him in his work for the coming year.

Naturally, the taste of the photographer will guide him in the choice of the annual which he will want to purchase, but there is little doubt that *Photograms of the Year* will appeal to each and every photographer. Included between its covers are examples of the world's finest photographic art, so that even the veriest tyro can have the world's exhibitions brought to his own doorstep. He can admire pictures produced by the finest craftsmen in the photographic realm, and he can gain an incentive for his future work therefrom.

The book also contains other interesting and informative items, not the least among these being a list of the photographic and ciné societies in Britain. Then there are articles by well-known and famous photographers, the perusal of which should give almost any class of photographer an inspiration. The production is beautifully printed, and the cost of the work is remarkably reasonable considering the value therein contained.

For the Bookshelf.

Bound in paper covers it costs but five shillings; but the reader who really cares for pictures will certainly run to the extra two shillings and sixpence for cloth boards, which make it a permanent record to be kept on his bookshelf. A de luxe, leather-bound edition is also obtainable at ten shillings and sixpence.

The "B.J. Almanac" is an annual of more technical type. It contains a series of articles on general topics by well-known photographers, and a review of the new apparatus and processes that have appeared during the past year. A collection of formulæ and tables is included for reference, and there are reproductions of some of the outstanding pictures of the year. About half of the 700 pages consists of advertisements and lists of addresses of dealers and makers of photographic goods of all kinds.

This annual appears a little later than the others mentioned—it is usually issued towards the end of January—but at two shillings it can be relied upon as a good investment for regular reference by the practical worker, who will not fail to keep it handy on his workroom shelf.

For the Free-Lance.

There is a greater tendency to-day for the amateur photographer to endeavour to get some of his better photographs published in the Press, and this is, of course, an excellent way of helping to make the hobby pay for itself.

Where to send these photographs is, however, a very big problem, which is largely solved by the purchase of "The Writer and Artists' Year Book," published by A. and C. Black.

This is a mine of information both for the literary man and the Press free-lance photographer, for it contains the addresses of every periodical publication, together with details of their requirements from contributors, whether photographic or journalistic. There is also a list of art agents, and, what is more important to the photographer, of photographic agencies, so that the worker who is at a loss as to which publication to dispatch his effort can make use of one of these.

The cost of this publication is three shillings and sixpence, and it is worthy of a place on the bookshelf of every persevering free-lance.

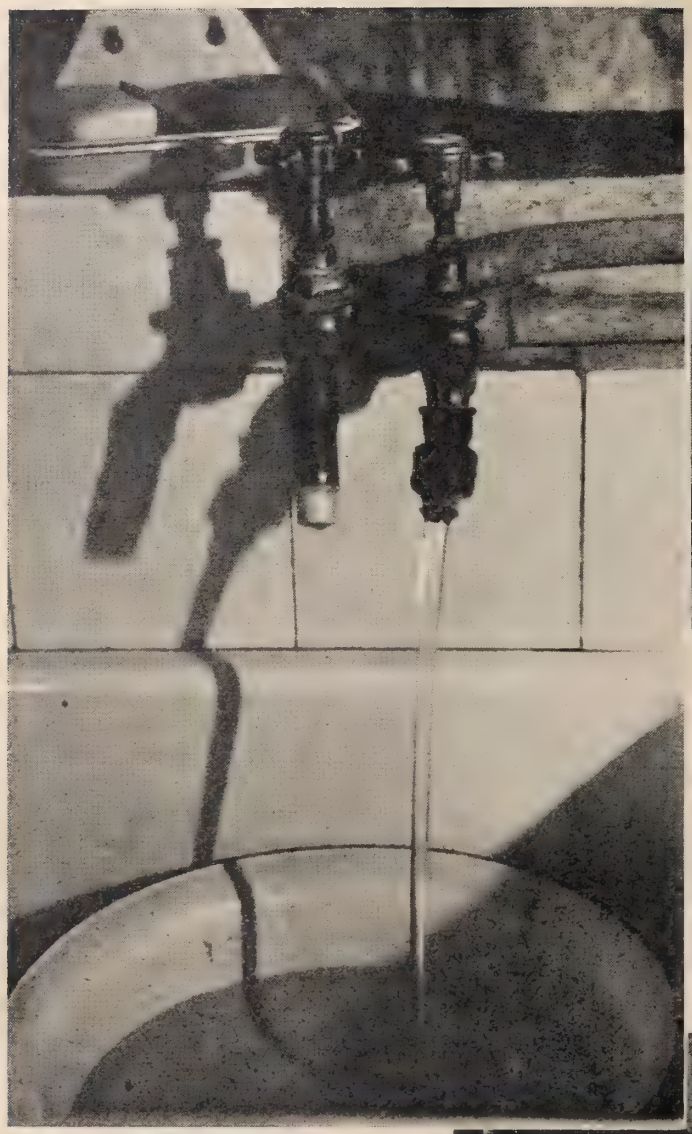
For the Camera Case.

For the modest expenditure of one shilling and sixpence the photographic worker can procure the Burroughs Wellcome Handbook. This consists in the first place of a diary; but it has in addition numerous tables for exposure records, and pages on various photographic processes, with hints on how to get the best out of them in the most convenient way.

On the question of development very full information is provided, there being extremely comprehensive "time and temperature" tables showing how long a film or plate needs to be developed in the various "Tabloid" developers. These tables cover all the plates and films readily available on the English market, and apply equally to development in a dish or in a tank.

Another important part of this little handbook is the exposure calculator. This is a very ingenious arrangement, consisting of a revolving disc with a series of figures from which, with the aid of the monthly light tables, it is possible to compute a correct exposure for any subject at any time of the year with a surprising degree of accuracy.

Most amateurs have at times been puzzled as to what exposure time to give different brands of development papers; this problem is solved by tables contained in this little handbook, which is so neat and compact in its wallet form that it can be tucked conveniently away in any but the smallest camera case.



For the Pocket.

The truly ardent photographer is not satisfied with books on his shelves and in his camera case—he must have something photographic in his pocket too. *The Amateur Photographer* Diary, issued to the public for the first time this year, contains nearly forty pages of facts, figures, and formulæ for photographers. Especial care has been taken in compiling these pages to include all those elusive things that everyone knows, wants frequently, and can never remember. There is a diary, of which each week occupies one page, and a series of pages conveniently ruled as an exposure record for jotting down the notes that one so often wishes to make when taking photographs. These pages are prefaced by a series of exposure tables based on the tables published each month in this journal.

The Diary is published at one shilling and sixpence, and is a daily companion that cannot fail to be of assistance to every amateur photographer. It is published from the office of this paper or is obtainable from booksellers, newsagents, bookstalls and dealers.

There are, of course, other annuals which will interest the photographer, but the above-mentioned ones are among the most useful of them for the amateur, and should find a place on every reader's bookshelf.

ODDS *and*

The running tap.

Pillow cases billowing.

A CRYPTIC title for a photographic article, for there is nothing odd about our hobby—nor an ending—unless it be, as roll-film users know, the end of a film that needs finishing.

This end can be very troublesome at this time of the year, and we have known people (we simply cannot call them photographers) who start their camera work in the spring with a secret joy that they have three or four exposures to be made on a film they put into their camera the previous autumn ere they have to buy another.

We are not of that ilk, and if we get left with two or three exposures on a twelve-exposure film our existence is an agony until they are used. Yet even if we do not belong to over the border, we cannot bear the stupid practice of wasting these odd exposures. Didn't one wee modicum of film of but two and a quarter inches square win £3,000 for its owner a short while ago? Enough to enable us to give up photography for the remainder of our precious days and take up ciné work!

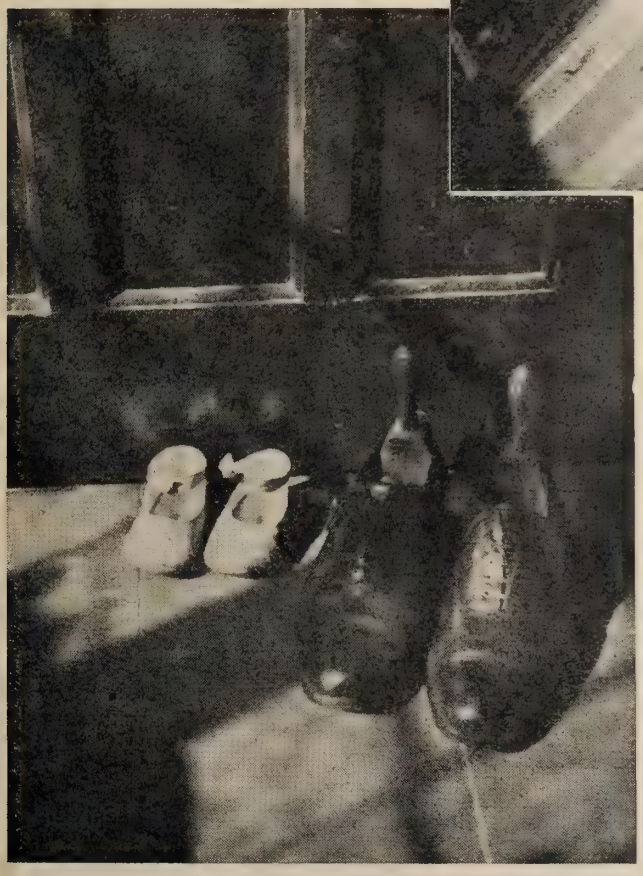
No; our use for these "ends" is to use them for taking "odd" exposures that we would not dream of taking had we a full roll of twelve virgin pictures-to-be. If you try this game you will find it very interesting and full of surprises; you must be serious—really serious in your intentions to learn something, if only patience.

Our aim is twofold. First we make an effort to take something that we have never seen taken before—a task in itself, if you follow all the photographic journals and papers as we do. Look around for some fresh original thing (we won't call it a picture, as it probably won't be one), but from which we will learn something either in the

Christmas—and all that.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

ENDS



By F. READ.

effort required to take it or in the inspection of the print.

Our running-tap picture shows what we mean. Stumped one night with one exposure left, and a desire to change the film ready for the next day, this is our "odd end." It was taken with magnesium ribbon and exposure of half a second at f/8 on super pan. film. We have learnt a lot from it. We know the exposure next time under similar circumstances (a great asset to a roll-film user, as he cannot make a test as the plate man can). We like the shadow of the taps. Next "end" we have we will make the lighting more oblique. Look!

Second crop.

Just like Daddy's!

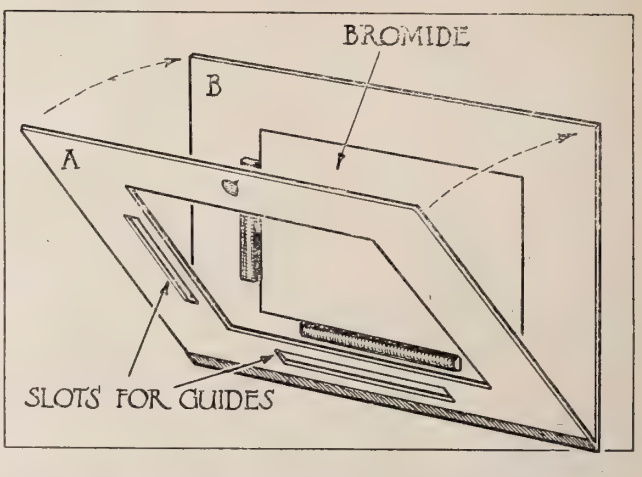
we have found how to render the water still—we will not have to experiment with this subject again, and can produce a picture at will.

The print of the shoes is another effort in this direction. There are plenty of such sunlit spots in every house, and we have often wondered if a picture could be found among them.

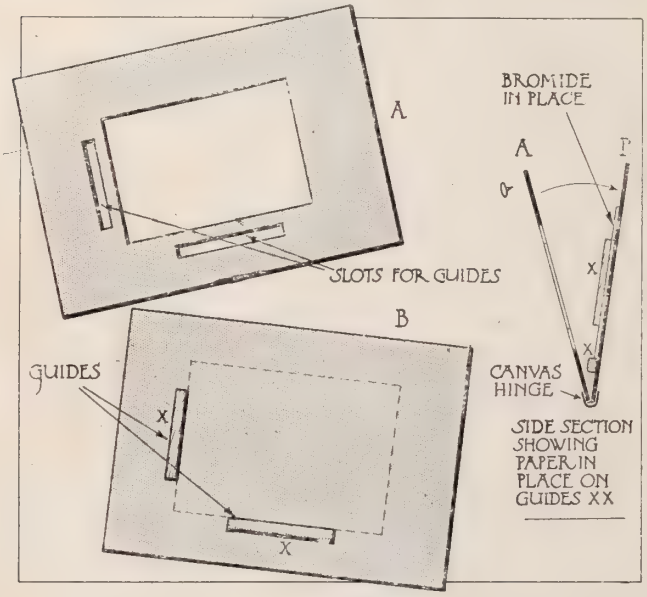
Our second aim is to try out something we have seen done before but which we would like to make our version of. Our picture, with the help of our young hopeful's toys, lies in this direction. Of course it has been done before—what has not in the photographic sphere? Our aim in taking this was to capture one of the fortunes that we are told await the amateur photographer in the realms of advertising. We thought the emptied nectar bottles a good idea, but the fact that we show it here with the copyright all our own is a broken-hearted confession that something went wrong.

This type of work has at least more appeal to the average man than plain "still life," and it is surprising how instructive it is. Obviously, a roll-film camera is called for, and your focussing must be very accurately measured.

You will learn more than focussing, though, for all these types of pictures require special exposure times and often a rather long one with a small stop in order to get depth. Give a real full exposure.



End of a busy year.



Readers' Hints, Tips and Gadgets

A REALLY EFFICIENT ENLARGING MASK AND PAPER-HOLDER.

A NUMBER of ideas for providing a mask to an enlargement have appeared from time to time, but, in most of them, it is necessary to adjust the paper in the frame by visual means in order that the mask shall be true. With such a mask one never knows for certain whether the paper has slipped slightly after the hand is removed, giving an uneven border which necessitates trimming to make square again.

With the mask here described the paper could be put in with the eyes shut without risk that the resulting white border would be untrue. It is made from two pieces of stout card of exactly the same size, the measurements depending on the size of enlargement to be made. On one piece is drawn a rectangle of exactly the size of the paper to be used. Inside this a slightly smaller rectangle is drawn, the difference in size being the width of the white margin desired. This smaller rectangle is then cut out with a very sharp knife, as shown at A. Two long, narrow slots are next cut, and here it is essential to exercise great care, or the mask will not be square. The length and width of these slots is immaterial, but it is absolutely necessary that the inner edge of each should be on the line marked out for the paper size as shown in the sketch.

Now place this piece of card squarely on the second piece, making certain that all the outside edges are perfectly flush. With a sharp pencil mark the position of the slots. Next cut two strips of thick cardboard, or wood, slightly shorter and narrower than the two slots, and prepare one edge of each so that it is perfectly straight. These are the guides, X X, which are glued to the baseboard, straight edge inward, in the positions already marked, taking great care that they are square. When the glue is dry, the mask is placed on the baseboard, and the two are bound along the bottom edge with a piece of linen to act as a hinge.

With a horizontal enlarger the base is pinned to the easel in roughly the desired position, and, with a vertical enlarger, it is secured by means of drawing-pins to the baseboard of the enlarger. To use, it is only necessary to open the mask as in the illustration, place the sheet of paper on the bottom runner, and slide it along until it reaches the runner at the side, when it can go no farther. The mask is then shut, held closed by a push-pin, and the enlargement made in the ordinary way. So long as the two runners and their slots have been accurately placed, an even white border will result every time without any special care.

If several sizes of paper are to be used, a mask must be made for each; they can be made at the rate of two an hour. Large sizes—say over whole-plate—should be made in wood for rigidity.

L. GORDON PAULE.

CARD INDEXING.

MANY readers have probably already adopted the card index system of classifying information for reference and accordingly will be fully aware of the various points dealt with in this article. At the same time, there are others who associate card indexes with office routine and who perhaps have never considered their utility in other directions.

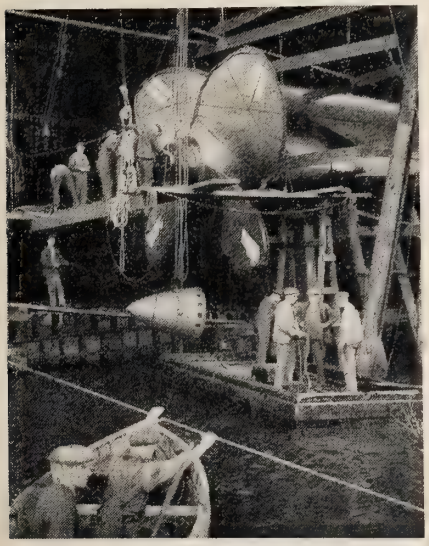
The latter class would be well advised to consider "The A.P.'s" offer of a very useful card index, complete with photographic data conveniently arranged for reference, the cost of which is practically negligible. This excellent idea deserves the attention of every progressive photographer. The card index method of arranging data is undoubtedly the best, and for general efficiency, adaptability and ease of reference is far superior to the "scrapbook" and other methods.

Quite probably, as already mentioned, it has occurred to a large number of readers that the idea can be extended considerably according to individual needs. For example, the cards supplied with the index are wide enough to take ordinary cuttings from "The A.P." and other sources, if required, in addition to the "Facts and Formulæ." References to portions of textbooks dealing with any particular subject can be entered on the cards and filed accordingly. Memoranda of competitions, dates, leaflets and instructions from packages of chemicals and materials, "pet" processes, etc., can be dealt with in a similar manner. In this way, the fruits of our own experience, as well as that of others, can be made available for immediate reference.

Perhaps, therefore, the writer may be forgiven for expressing the emphatic opinion that no photographer worthy of the name can afford to dispense with a method of reference such as the one described, irrespective of whether advantage is taken of "The A.P.'s" offer or not.

RONALD SHAW.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER



"MINIATURE" NOTES

Short articles, illustrations, hints and tips, formulæ, reviews, queries and replies dealing with Miniature Camera work will appear under this heading every week.

Miniature Technique for Large Negatives

By L. A. LEIGH.

THE user of a large camera is often rather careless about his negatives, on the assumption that they will never require a great degree of

1. *From an enlargement of the entire negative.*

enlargement. This is only true when the whole of the negative is used; but as long as the camera has only one lens, it is safe to say that in almost every case the picture can be considerably improved by enlarging only a portion, and often a disconcertingly small one at that. A portion, in fact, about the size of a miniature negative, in the making of which a fine-grain developer and all the accurate perfection of "miniature technique" is an acknowledged necessity.

3. *Here is the entire picture.*

Is it any less of a necessity for the large-camera user who does not possess a long-focus lens?

The largest camera which I use is $3\frac{1}{4} \times 2\frac{1}{4}$. By processing my negatives as described below I can always be certain of really good enlargements 20 × 16 in. from quite small portions of super-speed panchromatic films. I generally use plates, cut films or film packs, but the same procedure can readily be adapted for developing roll films.

All my negatives are developed in a tank by the time and temperature method, in a commercial non-staining and non-poisonous paraphenylenediamine developer.

The development times given by the makers of the developer were taken as a first guide and modified a little on the basis of experience to suit my individual requirements.

Negatives are developed at 68° Fahr., but the developer is brought up to 70° Fahr. in order to allow for a slight drop in temperature during development.

During development it is most important to keep the developer well agitated. The method of doing this depends on the design of the tank used, but the films or plates should be moved in the developer at least six times during development.

While the films are developing I have two large dishes handy. The first is for rinsing water; the second is for hypo. The latter dish should be sufficiently large to allow the films to lie at the bottom without overlapping. I use hypo with an acid hardener.

When development is complete, the films are removed from the tank and placed into the rinsing dish one by one. They are then placed one by one into the hypo, taking care that they do not lie on top of each other.

After fixing, the films must be carefully washed. The easiest and speediest method is a siphon tank, with a rack into which the films can be inserted.

In this the films cannot scratch one another, and will be sufficiently washed in less than half an hour. After washing, the films are immersed, one by one, for about half a minute in 4 oz. of water to which have been added a few drops of 10 per cent hydrochloric acid. The object of this bath is to remove all trace of lime and other salts from the washing water. If the acid rinsing bath is made too strong, it may react with the backing of some panchromatic films and

2. *An enlargement from a small portion of the negative calls for miniature camera technique.*

produce a deep blue stain. Should this happen, the stain can be removed by immersing the film in water made alkaline with a few drops of concentrated ammonia.

Before pinning the film to dry, wipe both surfaces carefully with a clean viscose sponge or chamois leather. The films should be placed to dry in a dust-free cupboard.

Films processed on these lines will bear the same degree of enlargement as miniature films, and the worker will have the satisfaction of knowing that in cases where the part is greater than the whole, he can set about enlarging the part with an easy mind.

4. *And here is a much better composition made by enlarging a small portion only of the negative.*

Shading the Lens

By DAVID CHARLES.

Fig. 1. The Baseboard as Sky-shade.

THOSE who are fond of working "into the light" are familiar with the results of allowing stray light not forming part of the picture to strike the lens. Only too often the stray light utterly destroys the brilliance of the effect whose beauty was the incentive to take the photograph. But comparatively few people realise that an open overhead sky, even when the sun is behind the camera, is often bright enough to do at least some damage.

Some miniature cameras already possess a sky-shade of ample dimensions without their owners realising it. Reference to Fig. 1 will explain how and when this happens. In the case of a camera which does not own a baseboard which can be inverted in the manner shown, a flat piece of cardboard held on to the inverted camera will serve the same purpose. For a more permanent shade blacken a piece of flat metal or thin plywood and make a hole in it by which it can be clamped to the tripod bush of the camera by means of a screw.

Once when out with a twin-lens camera a subject was suddenly seen which just cried out to be taken, but at the right point of view the sun was striking slightly into the lens—and the lens hood, of course, had been left at home. Not to be done out of my picture, I shaded the lens by clipping a spool-carton in the fingers of one hand (as in Fig. 2) and got the result I wanted that way.

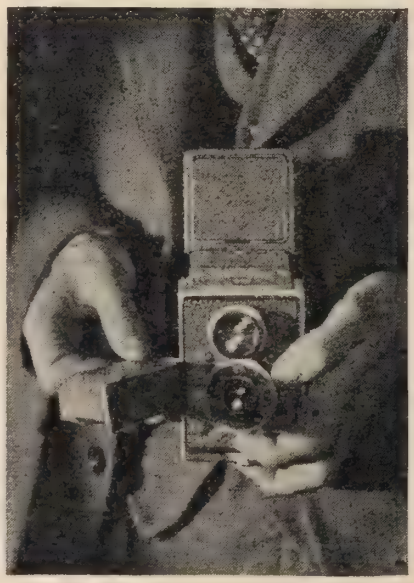


Fig. 2. Using a Spool-carton.

Fig. 3. Dangerous Reflections from the Hood.

On another occasion I bribed a small boy to stand beside the camera and shade it with his fat person! There is nearly always a way, if one really wants the picture.

But there are occasions when even a real lens hood of the conventional type may prove to be a danger rather than a benefit. If the sun strikes the inside of the hood in the way shown in Fig. 3, the glare, even on the black metal, may produce precisely the trouble one is seeking to avoid, because such a brilliantly-lit surface close to the lens may give rise to reflections of it inside the camera. To prevent this the hood can be extended temporarily on the sunny side, say, by means of a post card held against it.

Chemicals and Camera

ALTHOUGH photography cannot be carried on without the use of chemicals, the actual camera should be kept well away from their influences. The dark-room is the very worst place of all, short of the garden shed, in which to store a valuable camera. And not even the greatest anxiety to get results into a visible form should be allowed to excuse the cardinal crime of leaving the camera on the developing bench. Not only will any spilt solutions which may get to it immediately ruin its appearance, but the more insidious fumes from the acid-hypo bath, and continued exposure to the always slightly damp air of a dark-room, will cause deterioration of the lens itself.

Glass is so often regarded as an entirely permanent and impenetrable substance. But it is not. Some of the glasses from which lenses are made are comparatively soft, and in any case must necessarily have any hard outer "skin" removed in the process of grinding and polishing.

A lens which has been exposed for any length of time to the action of even the weakest chemical fumes becomes "tarnished." Its perfection of polish is spoilt, even if it does not assume the bluish film which can be seen on many a carelessly treated lens. Not only will the performance of a lens be worsened as the result of its high polish becoming dimmed, but when the time comes to "trade" the camera for a better one, its cash value will be found to have gone down considerably. G. K. SEAGER.

In portraits taken on panchromatic film by artificial light the lips often appear too pale. If you do not use a blue filter, which inevitably increases exposure, make your sitter wear lots of lipstick. And keep some in stock for the bachelors.

Asking for Trouble.

Modern Miniature Cameras

THE "ROLLEIFLEX."

THE modern model of this little twin-lens reflex is generally known as the "Automatic Rolleiflex." The term "automatic" is by no means misplaced, for the manipulation of the camera is so simple that it very soon becomes second nature. We have seldom handled a camera in which the controls fall so naturally to the hand; it is very evident that the camera has been designed by a practical photographer.

The camera belongs to the general class of twin-lens reflexes, the finder lens, for the sake of accurate focussing, working at a slightly wider aperture than the taking lens. On releasing a catch the hood springs up automatically, the magnifier for fine focussing simultaneously springing into place. This magnifier, through which the whole screen can be seen, if the eye is placed close to it, can be pushed out of the way if not required, but its framework is so slender as to obstruct the view of the screen to a negligible extent.

Focussing is performed by a knob on the side of the camera which racks the front forward. This knob carries a focussing scale graduated in metres, but as it makes two revolutions to complete its travel the scale extends only from infinity to 1.7 metres. By this means an open scale over this range is obtained for use in conjunction with the depth-of-focus table on the back of the hood.

The camera will focus objects as near as 1 metre (39 in.). Errors due to parallax are avoided without introducing any mechanical or optical correction by making the focussing screen a shade shorter from top to bottom than is the picture, thus ensuring that an object seen on the focussing screen, whatever its distance, will also appear on the negative.

The two lenses are surrounded by a common casing into which the Compur shutter is built. On the top of the casing two scales show through a small window, and can be seen, without moving the camera from the taking position, by looking over the top of the hood. These two scales show lens aperture and shutter speed, these being adjustable by levers projecting from the sides of the casing on a level with the taking lens. Both stop and shutter speed can therefore be adjusted with certainty without moving the camera from the "ready" position. At the bottom of the casing, underneath the taking lens, is a third lever conveniently operated by the forefinger of the right hand. On pulling this lever to the right it sets the shutter, which it releases when pushed over to the left.

To use the camera at eye-level, the hood is completely folded down except for the open-work top cover, which has a square opening to act as a direct-vision finder. The customary back-sight is replaced by a small concave mirror set in the centre of the frame. When the pupil of the eye is central in this mirror, and in focus, the eye is in the correct position.

The film travels round the camera from bottom to top, and the take-up spool is driven by a crank on the right-hand side of the camera. When the camera is first loaded, the film is drawn across the picture opening, which is flanked by a pair of burnished rollers, and threaded on to the take-up spool in the usual way. The back, which carries a pressure-plate supported by unusually strong springs and a further roller to ensure tautness of the film, is next closed, and the film is advanced by means of the crank until the figure 1 is seen through the red window. From this point on transport of the film is entirely automatic, the film being changed after each exposure by one sweep of the crank. The number of exposures made at any moment is indicated on a counter, and as the number in the counter approaches 12 the growing diameter of the take-up spool is compensated by shortened travel of the crank.

The camera takes standard $2\frac{1}{4} \times 3\frac{1}{4}$ 8-exposure films, and each length gives 12 pictures 5.6×5.9 cm. (approximately $2\frac{1}{4}$ in. square). It is also obtainable in a smaller size, taking 12 pictures 4×4 cm. on V.P. film. This small reflex is fitted with an f/2.8 Zeiss Tessar of 6-cm. focal length, and costs £26; while the 6×6 cm. model we have been describing costs £25 with f/3.5 Tessar of focal length 7.5 cm.

Both are fitted with the Compur-Rapid shutter.

The cameras can be obtained through any dealer, and particulars are available from the wholesale agents, Messrs. R. F. Hunter Ltd., 51, Gray's Inn Road, London, W.C.1.

Miniature Camera Gossip

By LANCELOT VINING.

What of 1936?

I SUPPOSE most of us will at this period of the year be reviewing the past twelve months; asking ourselves if our photographic work has really improved and if the results of our labours have given the satisfaction we hoped for when we made the exposures.

We shall, I have no doubt, continue to wonder why judges and editors refused what we were certain they would accept, and why certain pictures favoured by them were ever allowed to escape the dust-bin whilst in the negative stage. That is life, every walk of which has its delusions and enigmas and the photographic world cannot escape them.

Look back at 1936, get all the pleasure you can out of it; heed the lessons it has taught you; load your cameras and march ahead into 1937 with no regrets but a firm determination to get yourself "hung," either at the Salon, Royal or locally.

The big event in our year has been the formation of the Miniature Group, which is showing strength far beyond its age, with every indication of growing into something really formidable; the great thing is, that it is under control, and its first exhibition next June should prove an eye-opener to the miniature unbeliever.

A high-speed shot at Olympia.

Films and Developers.

New films of note are the Ilford trio, spooled for the miniature in metal containers; Kodak have also adopted the metal container for their films for the Contax and Leica, etc.

Amongst the fine-grain developers we have had many visitors from abroad, none of great note, and I think the only one deserving special mention is the home-produced Meritol. I am told this is not of the paraphenylene family; all I can say is that it certainly behaves like a very near relative.

What, no Filter?

At a certain social function, where the electric light was very yellow and of no great strength, a lady with a miniature camera asked me what filter I was using and seemed surprised when hearing I was not using one, as I found my fast pan. film seemed to gain speed in that type of light, and to prove my theory I photographed Sir Noel and Lady Curtis Bennett who were standing near (see illustration). I gave this 1/25th at f/1.5, and promised to put the result, if any, in my notes, provided the inquirer would buy a copy of "The A.P." (she confessed she was not a regular reader). I hope the editor will note that I have put the circulation up one copy.

"Candid" Portraiture.

18-exposure Spools.

Mr. C. Holt's letter, backing up Mr. Sowerby's appeal for a twelve-exposure spool for the Leica, will, I am sure, have many supporters, but after using a miniature almost daily for the past year on almost every variety of subject, I would advise an eighteen-exposure spool. I am certain this would be found to be a more useful number and much more likely to find favour with the film-makers. Incidentally, as it would contain half the amount of the standard 36 spool, if it could only be produced to sell at half the price there would be no coping with the demand.

At the Circus.

Those miniaturists who are proposing to visit the Circus at Olympia to make pictures should bear in mind the very definite regulations and restrictions that are now being enforced. Ciné cameras are, in particular, "taboo," as we understand that contracts with the artistes specifically rule out ciné pictures being taken indiscriminately. In certain special cases, however, the user of a still camera who wishes to obtain pictures at this remarkable Circus can personally apply to the Press office at the main entrance and obtain a permit.

Spotting Miniature Negatives

By R. M. FANSTONE.

IT is admitted that spotting pinholes on miniature negatives is not easy, but if the work is done carefully the defect will not show very much in the print. In any case it is better to convert a pinhole in a negative into a tiny opaque spot rather than leave it, as it is much easier to touch out a light spot on the enlargement than a black one.

In spotting miniature negatives we have to consider the fact that the miniature negatives are generally kept in a strip, or in some cases in threes or fours. This means that some method has to be devised to hold the negative on the retouching desk. A very simple means of doing this is to have a sheet of stiff card about three inches wide, and of the same length as the width of the desk.

In the centre of the card there is cut a rectangular opening of the same size as the negative. The card holder is held in position on the retouching desk with two "bull-dog" letter clips. This plan avoids the necessity for the photographer holding the negatives, the hands being left free.

In the case of small pinholes, the aim of the photographer should be to fill the hole with a spot of water-colour pigment of the same depth as the silver deposit surrounding it. A pan of moist water-colour lamp-black will serve for practically every kind of negative. A small magnifier will be found of assistance in actual practice, especially for those whose sight is not of the best.

It is most important that the spotting brushes should be of good quality. Satisfactory results cannot be secured with cheap brushes. The brush, when moist, should have a good spring to the point, and if pressed lightly down upon a sheet of paper, it ought, when pressure is released, to spring straight again. The best brushes are sable hair, and if only one is wanted, it should be a No. 1 size.

The best way to spot pinholes is as follows: A small amount of colour is taken on the brush, the pigment being equal in depth to that of the silver. In the case of pinholes in the shadow parts of the negative it is a good plan to touch the brush very lightly once or twice upon the gummed flap of an envelope after it has been moistened. This will assist in holding a very small amount of pigment. After charging the brush with pigment, the point is trailed very lightly across a sheet of clean paper, so that most of the colour is removed, and the point of the brush is left almost dry. A single touch should cause the defect to disappear, though in the case of larger pinholes two or three light touches may be necessary. Care should be taken to avoid putting on too much colour, which would make the result worse than the original fault.

Some photographers find a difficulty in removing pinholes with a brush. An excellent substitute is a fine mapping-pen charged with diluted drawing ink. The best way is to purchase a bottle of fixed indian ink. This should be divided into three parts, one diluted with its own bulk of distilled or boiled water, another with three times its bulk, and the third left as it is. This will be sufficient to meet different degrees of density. Care must be taken not to have the pen too fully charged, and it is best used almost dry, the surplus ink being removed by a series of light touches upon smooth paper.

***Fine-Grain Developers* (9).**

AN ANALYSIS OF BORAX DEVELOPERS

IN past weeks we have reproduced formulæ for fine-grain developers taken from many sources. Although bearing different names and descriptions, many of these formulæ have been very much alike in composition. To assist the reader in making his choice from among them, we print below, in tabular form, the composition of all the developers of M.Q.-borax type that we have published. In each case the composition is given in grams per litre of solution; English equivalents can be found by referring to the issue in which the formula was first published.

		Kodak D76A.	Kodak D76B.	Buffered Borax.	Kodak D76d (A).	Kodak D76d (B).	Gevaert GD 203.	Gevaert GD 205.	Gevaert GD 206.	GD 206 (diluted).	Dupont.	Agfa.	Ilford ID11.	Wellington.	D. & P. Developer.	Metol-Borax.	Rhodia Fine-Grain.

Miniature Matters

A selection of readers' queries that deal with "miniature" photography will be answered here every week.

HYPERSENSITISING A FILM.

I have heard that experts in theatre and night photography give their films some preliminary treatment before exposure with a view to enhancing the speed. If this is so, can you give me any details of the process? W. T. P. (London.)

One process of hypersensitising consists in exposing the film to the vapours of ammonia. The amateur can experiment by winding the unexposed dry film into a tank such as the "Correx," and placing in the tank a piece of blotting-paper soaked in strong ammonia.—The liquid, of course, must not touch the film.

After exposing the film to the ammonia vapour in this way for about a quarter of an hour, it is loaded into the camera. It must be used within a few hours, as the added speed very soon vanishes again. While the effect lasts, the speed of the film is so increased that exposures can be about one-half or one-third of the normal. Development must also not be postponed; it should take place within about six hours of hypersensitising the film.

DIFFERENTIAL FOCUSSING.

Having only recently replaced my larger camera by a miniature, I am rather disappointed to find that owing to the much greater depth of focus there is often a difficulty in getting the principal object to stand out sharply against a fuzzy background in the way to which my larger camera has accustomed me. Can you help me at all? S. P. R. (Winchester.)

Except perhaps when photographing very near objects at a very wide aperture, the miniature camera will never reduce the background to complete formlessness. If you are obtaining pictures in which the background is practically as sharp as the principal object, it may be that you have not yet acquired the miniature-worker's point of view in the matter of stops, and are still using f/8 or even f/11 for many exposures.

The miniature worker regards f/3.5 as a usual aperture, not as an exceptional one to be held in reserve for impossibly dull days or where the fastest possible shutter speed must be used. He looks upon f/6.3 in much the same way as the large-camera user looks upon f/16—as a small stop.

Using the wider apertures there is not usually any difficulty in obtaining considerable difference in sharpness between the principal object and the background, but where it is desired to accentuate this difference it can be done by deliberately focussing on a distance nearer than that of the principal object, leaving this only just within the range of depth of focus of the lens.

POOR DEFINITION.

I have heard and read much of the vast degrees of enlargement that negatives from a precision-made miniature camera can stand without loss of definition. I have bought such a camera, but my half-plate enlargements very definitely do not look like contact prints. I enclose a short strip of film; can you tell me why these negatives are not sharp? L. V. (London.)

Careful examination of your negatives shows that while horizontal lines are blurred vertical ones are practically dead sharp. We conclude from this that you are moving the camera slightly up-and-down at the instant you release the shutter. Use of a higher shutter speed might overcome this, but we suggest that you make a careful examination of the way you handle the camera. This will probably bring the fault to light, and you will then be able to cure yourself of whatever incorrect movements you have unconsciously developed.

IKOMAT CAMERAS.

I have been offered, second-hand, a camera called the "Baby Ikomat." It has a Zeiss Tessar lens and Compur shutter. Can you tell me anything about this camera, as the name is completely new to me, and I cannot find it in any catalogue? W. M. (Gloucester.)

The camera you mention is a Zeiss Ikon "Baby Ikonta." Until recently all cameras sold in England under the name "Ikonta" have been known in the U.S.A., whence your camera has evidently come, by the name "Ikomat." You will find a full description of the camera if you turn up "Baby Ikonta" in the Zeiss Ikon catalogue.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

how I make my EXHIBITION PICTURES

Methods and Ideals of well-known Pictorial Workers.

No. CCCLXVI.

Mr. ERIC G. CASTLE.

From information communicated to our Special Representative.

"'TO be or not to be?' How often has one said that! A print has been made, mounted and finished; is one satisfied with the result? Often, no; there is missing just that 'something' that raises a print above the ordinary—that brings with it the possibility of acceptance.

"What is that something? Neither you nor I can adequately put it into words. Is it not rather an ideal that is inherent in all that follow the art of picture-making in its many and varied forms; an ideal that has been followed throughout the ages; the ideal that has inspired the great masters in the past, to reproduce in some form or other the picture of someone or something as we see it? Like those who use the brush, we who use photography as a medium can approach a subject and produce a picture which, while in essentials the same, is an entirely different presentation from others; and that, I think, is more so to-day than ever.

"To make a print worthy of exhibition to-day calls for a great deal of thought, care and time, the standard set being very high. As I am a portrait photographer, all the prints I have had accepted have been taken in my studio. Naturally, I approach the job from an entirely different angle from that of the photographer who does all his work out of doors.

"I will not say that all the prints made are from sittings made in the everyday run of business; the majority are, but if I should see a 'type' or an interesting person naturally I endeavour to obtain a picture; and that makes for an interest outside the ordinary studio work.

"For lighting I use nothing but electric light on the half-watt principle. I use flat films exclusively—sometimes pan., sometimes ortho., whichever the subject may call for. So also with the choice of paper; what suits one negative will not suit another, although I lean towards chloro-bromide. There is a richness about a chloro-bromide print that is obtainable only with that paper.

"To obtain a result by photography alone, a print with the minimum amount of work on its surface, is my aim. To reverse the old adage, 'Get it in the negative,' I would say rather, 'Get it in the print.' Don't think I sacrifice negative for print. I don't. The cleaner a print looks, and the less one has to do to it by way of finishing, the better. One can do so much these days in the way of projection printing. With the judicious use of one's hands or a piece of cardboard, one can almost create a picture worthy of exhibition from quite a mediocre negative.

"To conclude these remarks I know of no other 'job' in life that brings so much variety and interest—one that is both a business and a hobby—as photography."

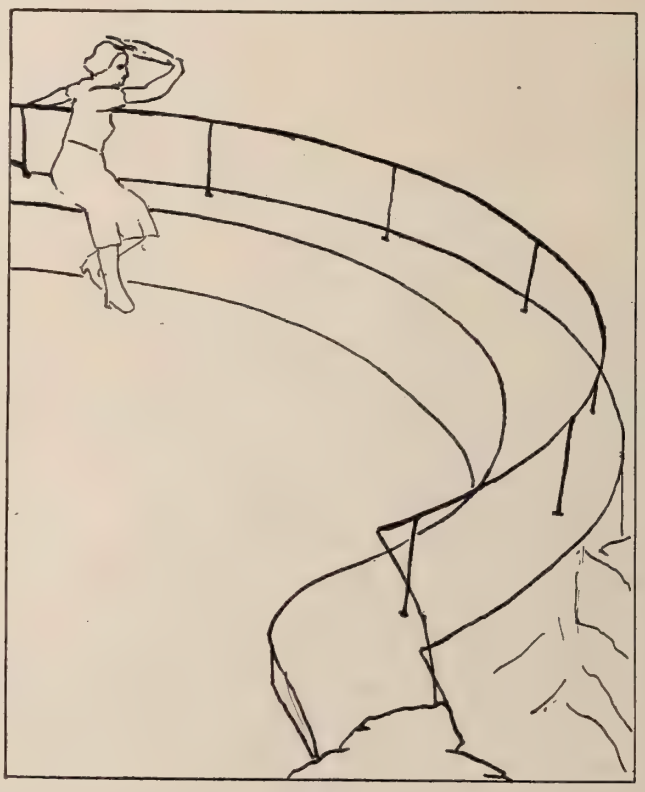
(A further example of Mr. Castle's work is reproduced on one of the centre Art pages.)

INTERLUDE. *Eric G. Castle.*

Pictorial Analysis

Every week the picture reproduced on the art page opposite will be analysed in detail for the benefit of readers of the paper who are seeking to improve their pictorial work.

"FAREWELL," *by Margit Eitner.*



AS an example of the modern Hungarian school, this picture —in its choice of subject material, in arrangement, and in treatment—is characteristic. It can be taken as representative of the kind of thing that is being done in that country to-day; it typifies and illustrates the work of a group of vigorous personalities there, and gives us an idea of the trend of pictorial photography in a sphere that has distinct points of difference from our own.

In selection of the subject there seems to be an inclination towards the portrayal of action, and most of the work might be described as figure studies. The figures, however, do not seem to be posed, but caught in a natural position without their knowledge or connivance. In very many cases, a high degree of spontaneity arises in consequence, and, not infrequently, there is an excellent feeling for pattern in the arrangement. Combined with a somewhat unusual outlook and an uncommon placing of the elements of the subject matter, a pronounced impression of originality is conveyed, which, in conjunction with a design of sound construction, causes an immediate attraction and one which is very well sustained after continued contemplation.

It is so in this instance. The position of the figure is decidedly out of the common. It is placed in the upper left-hand corner and considerably nearer the top and side than is usually thought advisable. Were it not for the fact that it happens to fall on a diagonal—from top left to bottom right—and also because of its position at the termination of the long sweeping curve of the parapet of the quay and its rails, the placing would be so weak that it could not possibly be justified.

But its position on a diagonal lends it a considerable accession of strength, and that strength is emphasised by the very powerful leading line of the curve. Moreover, the figure has the attraction of human interest, and the fact that she is shown in action further stresses her pull, so that, simply by these factors, what might have been a lack of force is converted into power, and there is no suggestion of that weakness that would ordinarily arise from a position so near the edge.

The curve is of considerable moment, too, in conveying an idea of pattern. So striking is it that it would not be surprising to learn that it was the curve that, first of all, stimulated the conception of the picture. It would, however, be found that when the subject were studied or viewed on the focussing screen it could scarcely be employed by itself, first, for the reason that it has so strong a tendency upwards that it would lead the eye straight out of the picture, and, secondly, because it would seem somewhat too obvious as an attempt at pattern-making, or, as a design, its character would be too abstract.

With the advent of the figure, the case would be altered. Besides forming a most effective centre of interest, her presence would provide a stop which would prevent the running out suggestion, and would enable the curve to be utilised in a properly subordinate function. It is cleverly managed, and the whole thing evinces a remarkable degree of skill. It is something of a pity, nevertheless, that, in the present rendering, there is just a touch of indecision in the outlines of the figure that scarcely enhances the method of its presentation. The exposure, as far as can be judged from the print, seems ample, and, if the indecision is attributable to subject movement, and half of that originally given had been adopted instead, it is very likely that movement would be so reduced that it would not be perceptible, nor does it seem likely that any marked degree of under-exposure, if any, would make itself felt. Similarly, if the fault is due to incorrect focussing, there is a margin to permit of stopping down.

In treatment, the print also illustrates the inclination of the Hungarian group in the direction of glossy bromide papers, for such is the medium employed in its production. There is no doubt but that this class of paper—where the negative is technically perfect, as it is in this case—lends great richness to the shadows, and gives a rendering of detail that cannot be matched in any other way, while, at the same time, every minute distinction of gradation in the lighter portions is specifically recorded.

An impression of brilliance is thereby created and is fully in evidence in this example; but, while admitting the brilliance, it is questionable if the warmth of sunshine is so well suggested on a paper with a white base as it is on one with an underlying tint of cream, and, somehow or other, a glossy surface does not seem to accord with a warm undertone. "MENTOR."

PICTURES by Novices

SOME CRITICAL COMMENTS on the Beginners' prints reproduced on the opposite page

OF all the prints reproduced on the opposite page, No. 2, "The Street Vendor," by W. Stevens, seems to strike the highest level of achievement. In its class it is excellent work. It is characterised by good workmanship, all the tones being fully and properly recorded, and, in its rendering of character, it goes far beyond any of its competitors.

Character and Expression.

To be sure, it has the advantage of an exceedingly good model and one with a certain picturesque quality, but, in the rendering of the expression and consequent impression of character, the subject is wholly dependent on the way it has been seen and taken, and on the sureness of the craftsmanship that has enabled the qualities in question to be reproduced.

The face is seen in profile, but the choice of viewpoint is such that all the features are plainly to be seen. They are shown against a setting that is neither aggressively dark nor too light to convey an impression of tone, and one which admirably sets off the features without becoming at all assertive. Its tone is in harmony with those of the figure, and could scarcely have been better chosen. As to the figure itself, it is clearly and sharply drawn; all the features are adequately in evidence; and the head is nicely placed in the picture space.

It may be, perhaps, just a shade or so overprinted, but that is a fault that is easily corrected, and, apart from this, it does not offer any occasion for criticism. It is a sound and effective piece of work, and it succeeds because trouble has been taken both with the choice of aspect and in its photographic treatment.

Isolating the Subject.

No. 1, "A Wheelman," by L. G. Powell, falls into another category, for the subject represents a full-length figure in a landscape setting, and is really a figure study instead of a portrait. There is rather a superfluity of foreground, and the inclusion of this places the figure too high in the picture space and too near the middle of the print. Moreover, the addition of something at the top to indicate the nature of the background seems advisable, and, if half an inch were trimmed from the base and an equal amount added to the top, not only would the figure seem better placed, but the probability is that something of the outlines of the distant hillsides would be disclosed.

The figure, however, is adequately isolated from the setting and stands out quite well. Nevertheless, it could be wished that his profile were more clearly shown, and while No. 3, "The Night Student," by Arthur Mead, is a reversion to the portrait class, the same remarks apply in this respect.

In the case of No. 2 the profile is plainly visible, but though the background in No. 3 is the darker, its profile is also of a much lower tone, and some of it is lost in the general obscurity. A stooping pose, such as this, demands a light source at a low level so that the features may be rendered in a higher key than the setting. Only by so doing—assuming the darker setting is retained—could the face be effectually isolated and made visible.

Choice of Setting.

As a matter of fact, the setting is much too dark. It is only on the rarest of occasions that so great a depth of tone in the setting is justified, and it is far easier to deal with a head placed against a background of middle tone than when a setting of either of the extremes is employed.

Here, the lightish tones of the figure, in contrast with the dark of the setting, also create an impression of harshness and excessive vigour that scarcely stands up well in comparison with the more harmonious arrangement of No. 2.

An even greater tendency towards excess of contrast is displayed by No. 5, "Fireside Comfort," by H. D. Griffiths. A similar deficiency is also shown in the cases of No. 6, "The W-ring," by P. James Gorvin; No. 8, "Nursery Rhymes," by F. J. Taylor, and No. 9, "An Old Artist," by Mark Clayton. In each of these cases there is but the one method of correcting the tendency that is practically feasible now that the negatives are made—that is, the substitution of a softer grade of paper for that at present employed.

This expedient, however, will only be effective in so far as the contrast results from over-development of the negative, and cannot, of course, counteract any deficiency that may arise from under-exposure.

Negative and Print.

Most of these subjects, of their nature, tend towards a greater than the normal degree of contrast, and, strictly speaking, this inclination should be countered by a reduction in the time of development—a procedure that will reduce the contrasts of the negative. If the exposure has been adequate and the negative has been developed for the normal time, the excess of contrast will be reproduced in the negative, but, if a paper of less than normal contrast is employed, the result will be approximately the same as if the contrast had been adjusted by decreasing development and using normal paper.

If, on the other hand, the exposure has not been enough, the darker tones will be represented in the negative by an absence of silver deposit, and nothing in the way of a photographic image. No dodging about with printing papers can introduce an image that does not exist.

Elementary Corrections.

These two faults—under-exposure and over-development—are, perhaps, more prevalent in the work of beginners than any other. They are elementary in character, and must be surmounted before work of a pictorial nature is attempted, and before the standard set by "The Street Vendor" can be attained.

With the remaining examples, Nos. 4 and 7, "Enjoyment," by Miss L. Andrewartha, and "Reverie," by A. J. Potter, both faults, as far as can be seen, have been avoided; but the former is disfigured by a band of fog along the top, and there is a lack of clarity in the outlines of the second which may be attributable either to movement of the subject or camera during exposure, or to incorrect focussing. Examination of the negative under a magnifier should disclose the cause and will indicate the steps to be taken to prevent a recurrence.

"MENTOR."

With the Beginners

NOTES AND NOTIONS FOR THE LESS ADVANCED WORKER

Every week an article will appear under this heading dealing with a topic of interest to the novice in photography.

SKIES IN ENLARGEMENTS.—II.

CONTINUING last week's remarks I would draw attention to Fig. 1, which is a typical example of the sort of sky which can be brought out by shielding the landscape with a bit of cardboard while giving extra exposure to the upper part. The sky-line is so regular that this is quite easy.

Last week I said that in a combination print I gave

Fig. 1.

ten seconds to the landscape and four seconds to the sky. These times must not be taken as suggesting anything except the inconvenient speed of my own enlarger, which I have had to repress severely to bring within reasonable bounds. When any dodging has to be done it is necessary to have plenty of time to manipulate it properly. One has to be pretty nippy to print in a graduated sky in a couple of seconds.

Fig. 1 is really a sky negative ; the landscape is no good. It is necessary to have a good stock of such negatives, as it is no easy matter to find one that will combine properly with any given subject. The form and arrangement of the clouds, the contrast, and the direction of the lighting must all be taken into careful consideration. It is well to include the sky-line, as this indicates the proper position of the clouds as regards height. Some photographers point the camera upwards so much that they afterwards print-in clouds just above the sky-line which belong much higher up.

We used to be advised to keep sky negatives very thin and delicate by under-developing. Very often the printed sky was then flat and dull, lacking in luminosity, and out of key with the rest of the subject. We should expose and develop so as to secure the natural modelling and gradations of the sky. Clouds may be lowering or brilliant ; but whatever they are their character should be reproduced in the print.

Another piece of popular advice I followed, but gave it up as mischievous rather than useful. It was, to project the image on to a piece of card, draw the sky-line with a pencil, and cut it out so as to make a suitable (?) mask. I often see prints in which this has obviously been done.

Imagine such a mask cut, with as much accuracy as possible, for Fig. 2. If the bromide paper—as mine always is—be under glass, the mask cannot be in close contact, therefore the outline will be diffused ; therefore the spire, for example, would not be clean-cut against the sky. Further, the mask must be kept slightly moving, and this will give a sort of light edge following the sky-line in parts, and allow the sky to run over the subject in other parts. Just think out what would happen with the dark and light outlines of the roofs in Fig. 2.

In many woodland scenes it is generally possible to print a sky right over the foliage, and do away with the

Fig. 2.

blank patches which are so common in these subjects. With other subjects it is possible to move the mask a little below the horizon when printing-in the sky. This must be done warily, in which case it is a great help in making the sky "blend" with the landscape.

The original sky in Fig. 2 was as near blank as made no difference, and I could not venture in this case to introduce a sky from another negative. Moreover, the foreground was all of about the same tone, and the best of skies would not improve this. So I did what I described a few weeks ago.

First I rubbed "dope" into the whole surface. Then with cotton-wool I applied lamp-black (oil) to the sky and the foreground. It made a fine mess of the upper part of the building and of the spire. With clean wool I wiped some of the pigment off parts of the sky and foreground; with a small brush, a trace of turpentine, and blotting-paper, I cleaned up the spire, the white ridge tiles, etc. No one who has seen the original print has made any rude remarks.

Fig. 3 had a reasonably good sky, but not quite strong enough, especially on the left. So I reinforced it, and also darkened the road, by the same means as with Fig. 2. Greater emphasis is thus given to the sunlight on the white walls. A weak sky and road would have weakened the whole effect.

Fig. 3.

As an alternative, both prints could have been similarly modified with stumping chalk and rubber, the prints being steamed afterwards. I much prefer pigment.

Let me, however, say most emphatically that I do not believe that pigment, powder, or any form of faking whatever, however skilfully done, can rival pure photography. We should use every possible effort to arrive at the desired result by photographic means; but when we fail I see no reason why we should not do what we can to improve matters. The great thing is that what we do should bring about a real improvement, and not be merely an advertisement of our shortcomings. There is such a thing as making bad worse. W. L. F. W.

A Beginner's Open Letter to the Editor

SIR,—By means of a little ingenuity I have been able to uphold the good name of amateur photographers.

My Aunt Melissa recently descended on us in her whirlwind fashion and announced her intention of staying the night.

Now there are two good reasons why one does not argue with Aunt Melissa; one is because she is well endowed with the good things of this world, and I am her only nephew, and the other is because she is one of those determined women who brook no argument. She is staggeringly efficient herself, and she expects efficiency in others—especially in her nephew.

Until this visit I had not seen my relative for some months, not, indeed, since photography had become the mainspring of my existence, and it was therefore natural that I should try to impress her with my enthusiasm and prowess. Consequently during dinner I made good use of such words as "ferro-prussiate process," "mercuric-iodide intensifier," and "fluorescence in radiography," and although these terms convey little or nothing to me, I had the happy satisfaction of knowing that they conveyed even less to Aunt Melissa.

I was well into my stride before the fish course was finished, and I was congratulating myself that I had never before held my aunt's attention for so long, when she suddenly interrupted me with, "You shall take my photograph in the morning."

Now, sir, although there are few more ardent amateur photographers than myself, there are also few worse ones, whilst portraiture is a side of the hobby from which I shrink in terror. Add to these facts the old lady's deplorable vanity, and I feel that I shall have your sympathy.

After meekly accepting her command, I suddenly said, rather more brightly than I had intended, "Oh, I don't believe I have a single film left, I remember that I exposed my last one yesterday." Aunt Melissa merely supposed that there was a photographer in the village where I could obtain a film, and added that she was not leaving until after tea. There was nothing for it, and next morning I visited my friend the village photographer, where I made my purchases and explained my plight.

I told Aunt Melissa, who has a sort of morbid craving for precision, that if she would come into the garden a few minutes before twelve, I would take the eventful picture punctually at noon.

My garden boasts a thick, horseshoe-shaped bank of rhododendrons, and I selected this as a suitable site for the photograph. I placed a chair in the centre of the semi-circle, and rigged up my camera and stand ready for action.

When my kinswoman appeared I told her that I had always longed for a picture of her remarkably fine profile, and that wild horses would not induce me to photograph her from any other angle; my flattery won the day, and she acquiesced as meekly as Aunt Melissa can acquiesce.

Punctually as the village clock boomed its first stroke of twelve I made my exposure, and promised that the photograph would be forwarded to her in the course of a couple of days. I also took advantage of the occasion to explain that my camera, owing to my customary financial embarrassment, was by no means a first-class instrument. "Indeed," I added, "it is really intended only for landscape work, so you must not expect anything too wonderful in the way of a portrait."

Two days later, true to my word, I sent her quite a good picture; it displayed her Wellingtonian features admirably, and I felt convinced that she would be flattered and pleased.

By return of post I received her letter of thanks and, for the first time in my life, her approbation of my efforts. The letter was also accompanied by a handsome "enclosure" with which, she explained, I might possess myself of a new and better camera.

Do you think, sir, that it will ever occur to Aunt Melissa, as she looks at this portrait of her handsome profile, that I was standing on her right-hand side, whilst my friend the village photographer, who was safely hidden in the rhododendrons, was on her left?—Yours, etc., A. A. B.

Picture Points

No. 30 (Conclusion) *by RICARDO*

Figure Grouping.

THERE is no doubt that a group of figures is one of the most difficult of subjects to arrange if it is to be both pleasing and natural. If the arranging is done too carefully and laboriously then there is always the danger that they will eventually look stiff, and lose that natural and spontaneous attitude that is so essential to a subject of this kind. We must therefore learn to recognise a natural grouping so that the exposure can be made whether the group is active or at rest.

The top sketch has several faults in the grouping. The principal object, the snow-man, is too central in the picture, while the figures of equal size and tone are placed equally on either side, and are much too rigid to be pleasing.

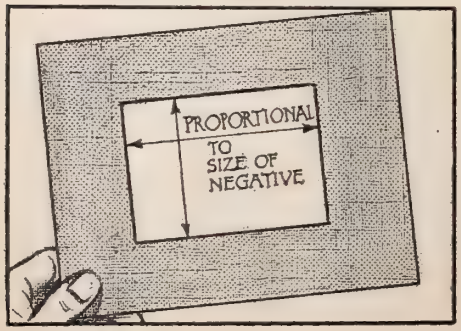
The small figure on the right is a little too far away from the group.

Compare this with the lower sketch and note the improvements. Each figure has a different "direction" and together they have more variety in position and placing.

Snow Subjects.

THERE are comparatively few opportunities in this country for snow pictures, so perhaps a few words on the subject will help beginners to make the most of the rare occasions.

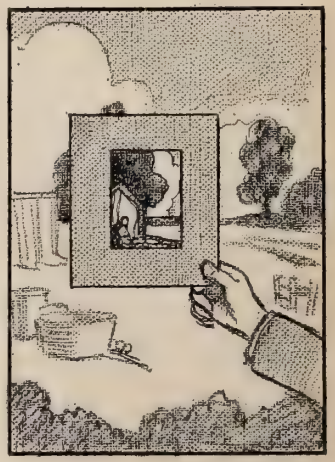
In circumstances like that in the first sketch, where a conventional upright picture of a snow scene is shown, it does not always occur to photographers that a side tilt to the camera will often result in quite an attractive picture out of an otherwise conventional arrangement. But there must be nothing usually seen vertical, such as a standing figure or building, to reveal that the camera was tilted. The dotted lines show the position of the second picture, and show that it would be impossible to obtain the same effect by masking off in the enlarging.



Shadows and low lighting are of great value in this type of subject as there is otherwise a great danger of the snow registering as a blank white space on the print. Treat the snow as a low relief subject, look around for a surface which is almost in line with the sun, and even if there are no bushes or trees growing to provide a *motif*, a little resourcefulness can often *supply* something else, a twig and a leaf or two, or even footprints.

Snow shadows are mainly blue in colour, so that a medium yellow filter will make them darker and more useful in the picture.

In Conclusion.



WE are concluding this second series of "Picture Points" with a description of a viewing device that will be of great help in composing to all photographers, beginners and advanced workers alike.

It consists simply of a piece of dark card or thin metal with a rectangular hole cut in the centre. Where the camera does not supply a negative of conventional proportions, such as $2\frac{1}{4} \times 3\frac{1}{4}$, etc., it is suggested that the hole be made in proportion to the printing paper usually employed. A convenient size for the pocket is a card cut $4\frac{1}{2} \times 5\frac{1}{2}$ with a hole $2\frac{1}{2} \times 3\frac{1}{2}$ in the centre. Where the outside size is of no importance, then it is preferable to have the margins wider still, since it is these that make the mask so useful. They cover up all surrounding details that are usually so distracting, and so allow one to concentrate on the essential subject matter inside the frame.

It can be held at any distance from the eye, and when a suitable arrangement has been made or selected, all that is necessary is to position the camera so that the ground-glass or view-finder includes a little more all round the view decided on.

To be able to decide on or "see" a picture before the exposure is made is of greater value than to guess at it and chance that the negative will include a portion that will provide a picture. It will be seen that it also provides a handy means of practising picture-making whether a camera is available or not.

THE AMATEUR PHOTOGRAPHER & CINEMATOGRAPHER

Amateur Cinematography

NEWS, NOTES AND MATTERS OF INTEREST FOR ALL CINEMATOGRAPHERS USING AMATEUR CINÉ APPARATUS.

The Ciné Film Lecture versus the Lantern Lecture

By D. ALDWYN JAMES.

THERE is no doubt that the most popular means of illustration for a lecture is the lantern slide. It is being used in conjunction with varied subjects, and it will continue to be used until it is superseded by a better method of illustration. A picture is capable of telling a story better than a great flow of words. And whilst a long speech will tend in the end to kill interest, a picture has the property of retaining interest in an otherwise dull subject.

However, the lantern slide has failed to solve the problem of illustration completely. It possesses, definitely, certain inherent disadvantages. Absolute continuity is not always possible, although the slides may follow each other in correct sequence. But there is a vast difference between sequence and continuity. A lantern slide can never hope to give to the minds of an audience what a ciné film can give.

In medical schools, perhaps more so than in other schools, illustrations of the subjects dealt with are of paramount importance, and until lately the lantern slide has been depended upon to supply the need, at lectures and demonstrations.

Some years ago, with co-operation between a photographic firm and a gramophone record manufacturing concern, an experiment was tried for the first time in one of the large London hospitals. An attempt was made to make a "running commentary" on an operation performed by an eminent surgeon so that the students studying at the hospital should benefit. This initial step was an unqualified success, and since that time more use has been made of the facilities offered by this new method of teaching.

Before this innovation, students had to sit in the operating theatre gallery and look on. This method of watching the progress of delicate proceedings was of necessity rather haphazard, and was bound to cause some students to miss some details, impossible to see at a distance.

A ciné film of the operation, shown in conjunction with a sound record of the surgeon's voice explaining the progress of the operation, altered all this misunderstanding, and not only was it possible for every student to see the details, but it became possible to repeat the same thing all over again should the occasion arise for the purpose of further explanation. An impossible thing to do during an actual operation.

The above has been quoted to cite an actual case of the advantage offered by the ciné film in conjunction with sound as a means of illustration to an audience. The possibilities of the lantern slide are *nil* compared with the sound film on occasions similar to the above.

But all the advantages of the ciné film in conjunction with sound have not yet been exhausted. We will investigate its possibilities for the lantern lecture.

In the most carefully prepared lantern lecture there are some factors very difficult to remove entirely. Assuming there is good co-operation between lecturer and lanternist, there can never be a perfect continuity in the programme like that offered by the film. In the case of the film there is constant progress from one scene to another, performed almost automatically. And this makes it possible, by using "talkie" apparatus, to couple the voice of the lecturer to the pictures so that perfect unison is maintained right up to the end of the lecture.

But there are distinct advantages in being able to do this. The most experienced lecturer will always admit that, if he could possibly repeat the lecture all over again he would leave out, or add, something. There are no delays, however short, in changing from one picture to another. And the lecturer keeps to his point always. Another point is that the wording in the lecture can be perfected, by being polished, and committed to paper before it is recorded by the record or sound track. During the recording the lecture may be read from the manuscript, a procedure likely to create loss of interest if done in the presence of an audience. Nervousness, common to most lecturers in a greater or lesser degree, is entirely overcome, and a perfectly natural rendering may be given of the most complex subject.

The fact must not be lost sight of that sound really takes on a subordinate part. A well-made ciné film will need

The value of a low view-point is well illustrated in this topical subject. It is one that the amateur ciné worker can exploit to the full at this time of year.

very little sound in the form of explanation to give meaning to what is being illustrated. Should a great deal of sound be required, it may be assumed that the film itself is a failure. A picture should be capable of telling the story without much supplementary assistance.

Again, the ciné film shows movement—a most desirable feature in order to add interest. In this, alone, the ciné film scores over the still picture.

Critics of the cinematograph used for lecture purposes argue that the noise of the machine tends to spoil the effect of an otherwise good lecture. If the machine does cause some noise, this can quite easily be reduced to negligible proportions by screening the machine in a temporary housing.

However, speaking generally, it would be expressing too optimistic a view to say that the "talkie" will soon oust the slide. But it may be said quite confidently, that now substandard machines of excellent quality are becoming available, it will not be a far distant time when "talkie" apparatus will become more common for the purposes stated above. The number already installed in schools tend to point to this fact.

The hope is expressed, however, that a reduction in the price of the machines as the demand increases will help to increase the very few that are already in use.

The Week's Meetings

Societies will have their meetings announced here if the syllabus is sent to us at the beginning of the session or from time to time.

Wednesday, December 30th.

Bayswater and Paddington P.S. "Indoor or Outdoor Portrait."
Brighton and Hove C.C. "Miniature Photography by 'Rolleiflex'."
Chorley P.S. "The Camera as a Pal." J. B. Statters.
Croydon C.C. "Mendoza, the Mechanical Draughtsman."
G.E. Mechanics' Inst. P.S. Bromoil.
Ilford P.S. Print Competition and Criticism.
Oldham P.S. Quarterly Meeting.
South Essex C.C. Print and Slide Criticism.
S. Sub. & Catford P.S. "London's Rural Touches." S. E. Jones.
Streatham and D.P.S. Criticism of Members' Prints.

Thursday, December 31st.

Accrington C.C. New Year's Eve Social.
Camberwell C.C. A. G. M.
Hampshire House P.S. "The Pyrenees." J. Ainger Hall.
N. Middlesex P.S. Sending-in Night. Trial of Exhibition Slides. etc.
Watford C.C. "Lantern Slides." R. R. Rawkins.
Winchester P.S. Social Evening.

Friday, January 1st.

Royal Photographic Society. Informal Meeting of Pictorial Group.
Brighton and Hove C.C. Committee Meeting.
Colne C.C. "The Agfa Colour Process."
Harrogate P.S. "Where?" Riley Fortune.
Ilkeston Arts Club. Bridge Drive.
King's Heath and D.P.S. Print Criticism—Night.
Photomicrographic S. "Microscope Problems." W. E. Watson Baker.
Partick C.C. Rooms Closed.
S. Suburban and Catford P.S. Annual Subscriptions Due.
Wimbledon Ciné C. Party.

Saturday, January 2nd.

Edinburgh P.S. Close of Exhibition," Photograms of the Year."
Luton and D.C.C. Exhibition Opens.

Monday, January 4th.

Bradford P.S. Annual Whist Drive.
City of London and Cripplegate P.S. Second Print Competition.
Derby P.S. "Holidays in South Devon." F. Woore.
Dewsbury P.S. Annual General Meeting.
Erdington and D.P.S. Display of Amateur Ciné Films.
Halifax P.S. Committee Meeting.
Ipswich and D.P.S. Demonstration of Carbro Process. V. Lighton.
Kidderminster and D.P.S. "Famous Old Inns of England." H. B. Button.
Kingston C.C. "Wealden Ironwork." E. Yates.
Leeds C.C. Annual Meeting.
Leek P.S. "The Gates of the Orient."
Long Eaton and D.C.C. Lantern Lecture. W. Speed.
Maidstone and D.P.S. Programme of Films. C. G. Buckton.
Newcastle (Staffs) and D.C.C. "Composition." C. E. E. Connor.
Oldham Equitable P.S. Advance, Novice and Technical Competitions.
Phœnix C.C. Annual Social and Dance.
Preston C.C. "From Liverpool to Vancouver." Mr. Maynard.
Southampton C.C. "Photographic Experiences." P. Fripp.
S. London P.S. Criticism of Prints and Slides. January Competition.
St. Helens C.C. "Philately and Photography." Dr. J. A. Donnellan.
Walsall P.S. New Year Social.
Walthamstow and D.P.S. "Enlarging."

Tuesday, January 5th.

Royal Photographic Society. "Camera and Microscope." F. Martin-Duncan.
Ayr A.P.S. S.P. Federation Colour Slides.
Basingstoke C.C. "The After-Treatment of the Negative." Johnson & Son.
Birmingham P.S. "Winter in Switzerland." F. A. P. Zacharias.
Blackpool and Fylde P.S. L. & C.P.U. Competition Slides, 1936.
Beckenham P.S. "Some Midland Recollections." T. D. Nunn.
Cambridge P.C. Annual Social.
Doncaster C.C. Demonstration: "Enlarging." R. Gledhill.
Dunfermline P.A. Fireside Talk.
Grimsby P.S. "Film Titling." A. T. Chard.
Hackney P.S. "Amateur Photographer" Prize Slides.
Halifax P.S. "Yorkshire Minsters." C. B. Howdill.
Harpenden and D.P. and C.S. Demonstration of Simple Bromide Enlarging.
Harrow C.C. "Pompeii and Herculaneum." E. A. Robins.
Leamington and D.P.S. Lantern Lecturettes and Discussion.
Leicester and Leicestershire P.S. Programme by Record and Survey Group.
Manchester and A.P.S. "Critona."
Monkland P.S. "Mounting the Exhibition Print." D. MacDonald.
Morecambe, Heysham and D.P.S. "True Pictorialism" F. C. Tilney.
Norwich and D.P.S. Portfolio Discussion.
Norwich C.C. "From Hypo to Exhibition Print." J. H. Clark.
Nottingham P.S. "Enlarging and the Use of Chloro-Bromide Paper." A. Beeston.
Portsmouth Camera and Ciné C. Criticism of Print and Slide Competitions.
Rotherham P.S. "A Beginner's Experience in Photography." J. Hinchliffe.
Sheffield P.S. R.P.S. Competition Slides.
Small Heath P.S. "A Holiday in Iceland." D. W. Stevens.
South Shields P.S. Official Opening of New Headquarters.
St. Bride P.S. "Development." S. R. Audus.
Stafford P.S. Members' Enlarging Night.
Warrington P.S. Ladies' Evening.
Willesden P.S. "A Tour in Southern Ireland." Ethel A. Millers.
Wood Green P.S. "Masterpieces of Photography." J. D. Johnston.
Winchester P.S. Hants Selected Slides: Series XII.

Wednesday, January 6th.

Birkenhead P.S. "100 of my best Slides, etc." J. Shaw.
Borough Poly. P.S. Competition. "Best Print from Negative Taken in December."
Bradford P.S. Pictorial Group Evening.
Brighton and Hove C.C. Brighton Quartette.
Chorley P.S. L. & C.P.U. Prints.
Coatbridge Co-op. C.C. "Mounting the Exhibition Print." R. Penman.
Croydon C.C. "In search of Sunshine." F. G. Newmarch.
Coventry P.C. Stokes Challenge Bowl. Closing Day for Entries.
Darwen P.S. "Pictures for Pleasure." Kodak, Ltd.
Dennistoun C.C. Opening and Criticism of Annual Exhibition. A. W. Hill.
Edinburgh P.S. General Meeting.
Ealing P.S. Third Pictorial Competitions and Criticism.
G.E. Mechanics' Inst. P.S. "Miniature Photography."
Hall Green P.S. "Successful Picture-Making for Beginners." E. W. A. Cave.
Hinckley and D.P.S. Annual Exhibition.
Ilford P.S. "Finishing the Print." E. J. Lines.
London School of Hygiene P.S. "Charcoal Black Bromide Paper." G. H. Potts.
L.M.S. (London) P.S. "Lantern-Slide Making." F. Lord.
Phœnix C.C. "The Amateur Photographer" Prize Slides.
S. Sub. & Catford P.S. "Vesuvius, Pompeii & Herculaneum." E. A. Robins.
Tunbridge Wells A.P.S. "Pictorial Photography." J. Dudley Johnston.
Worcestershire C.C. "Pilgrimage to St. David's." Miss M. Wight.
York P.S. "Changing York." W. Watson.

NEWS AND REVIEWS

ITEMS OF GENERAL INTEREST FROM ALL QUARTERS.

A most attractive calendar has been sent us by Ilford Ltd. It contains a series of prints from photographs made on Ilford papers from Ilford negative material, and reproduced in photogravure.

Free criticism for miniature camera negatives is offered for this week only by Wallace Heaton, of 127, New Bond Street, W.1. A coupon which appears in Wallace Heaton's advertisement in this issue should be sent with the negative.

We have been asked by the Westminster Photographic Exchange, Ltd., Camera House, 24, Charing Cross Road, W.C.2, to insert a notice to the effect that they would be glad if Mr. S. G. Phillips, who ordered goods from them recently, would communicate with them as he omitted to enclose his address with the order and remittance.

The "Chromora" Photo-Light will make an appeal to the amateur photographer, not only on account of the advantages it offers as a good illuminant for taking photographs, but also because it may be used if necessary as a reading-lamp. The lamp consists of a highly-polished aluminium reflector and a bakelite stand with a universal movement. This enables it to be turned in any direction as a flood-light. It can also, if necessary, be hung on a wall and has a fitment for that purpose. A length of flex is supplied with the lamp and a special "Chromora" flood-light. The working life of this is approximately three hours; the light is extremely brilliant and sufficient for most indoor photography for the amateur. If used as a reading-light an ordinary electric bulb can be fitted in the place of the flood-lamp. The complete outfit, including one lamp, is 12s. 6d., and extra lamps are 2s. each. It is supplied by Raphael Industries, Ltd., Piccadilly House, 33, Lower Regent Street, S.W.1, to whom all applications should be made for further particulars.

The charges by the trade for developing miniature films has frequently been the subject of correspondence in these pages, and on previous occasions we have drawn attention to those firms who give special service for special results. Amongst these firms is that of R. G. Lewis, the "Miniature Camera Specialist," of 202, High Holborn, W.C.1. Mr. Lewis has not only personally specialised in the miniature camera and everything associated with it, but has a particularly adequate processing department that calls for attention. For ordinary fine-grain development the usual cost of 1s. 6d. per film of thirty-six exposures is charged, but for the production of negatives of the very finest obtainable grain, with paraphenylene-diamine development, a higher charge is made. In this case each film, from the time it is wound into the tank until it reaches the drying cupboard, receives individual attention throughout by one operator, an expert of many years' experience. Fresh developer is used with each film, and perfect development is secured by a special method of inspection. As, obviously, work of this character will occupy a skilled operator for a period varying from one and a half to two hours (in addition to the cost of the developer consumed), the comparatively high charge of 5s. 6d. per film is justified when the good quality of the work is considered. Our readers should apply to the above address for further particulars.

We draw our readers' attention again to the photographic class instructed by Mr. John H. Gear at the Cripplegate Institute, Golden Lane, London, E.C. The new Spring Session commences on Wednesday the 6th January. The syllabus includes many subjects and processes which are lucidly explained and demonstrated. The popularity of the tuition is such that the number limited is often reached before the session opens, therefore early application is necessary to secure a place.

Cri-Tona is the name of a special solution that has recently been put on the market by Criterion Ltd., of Stechford, the makers of the well-known Mezzotone, Vandyck and Bromide Papers and Mezzotone Plates. Cri-Tona provides a single-solution toner and intensifying bath that gives brilliant results in a variety of warm tones by simple immersion of the print. The makers stress the point, however, that the special metol-hydroquinone developer advocated by them for their Mezzotone and Vandyck papers should be employed if the best results are wanted. Colours range from warm black to sepia and the same procedure applies to slides on Mezzotone lantern plates. Cri-Tona is well worth the attention of our readers and is sold in half-pint bottles at 3s., or in one-pint bottles at 5s. One pint will tone hundreds of prints of the equivalent of whole-plate size. Thorough washing is necessary for toning and the prints then appear to be absolutely permanent.

The North-West Cheshire Salon of Photography is being held in Old Brunswick, Runcorn, from March 10th to 14th, 1937. There are two open classes, and entry forms and full particulars are now obtainable from the Hon. Salon Secretaries, Messrs. R. J. Edwards, 1, Waterloo Road, Runcorn, Cheshire, and W. Woodbridge, Cranford, Campbell Avenue, Runcorn, Cheshire.

The recent night outing for miniature camera workers organised by the Clapton Miniature Camera Club proved very successful. A considerable number of night pictures were taken, and a great variety of miniature cameras were used. This club has its headquarters at 139, Upper Clapton Road, E.5, and meets every other Friday. New members are welcomed, and full particulars will be sent on application to the Organising Secretary, Mr. Chas. C. Stewart, 7, Alcester Crescent, Upper Clapton, London, E.5.

FACTS and FORMULÆ

ONE or more items of practical value to the amateur photographer are given under this heading in every issue. They are printed in either the vertical or horizontal form as shown here, and each is complete in itself.

These facts and formulæ are intended to be cut out and pasted on the thin cards of the standard size, 5×3, supplied for card index cabinets.

The collection, when completed, will form a concise guide to photographic practice that every regular worker will value for reference, and for that reason no copies should be missed.

"A.P." filing cabinets have been specially prepared for this card index and are now ready. The size of the box is 5½×3½×3 and each is supplied complete with a set of alphabetical index cards and 150 cards for pasting on the "Facts and Formulæ." They are obtainable from our publishers, Messrs. Iliffe & Sons Ltd., Dorset House, Stamford Street, London, S.E.1. Price 2s. 6d. post free.

56.

SODIUM CARBONATE AND SODIUM SULPHITE. CRYSTALS AND ANHYDROUS SALTS.

BOTH sodium carbonate and sodium sulphite are offered to the photographer in two forms—as the anhydrous salt, which has the appearance of a white powder, and as crystals. It is very necessary to distinguish between them when making up formulæ, because the crystals contain a very considerable amount of "water of crystallisation." As a result, an ounce of crystals contains very considerably less of the active chemical than does an ounce of the anhydrous (water-free) form.

Sodium Sulphite.

By a convenient accident, the water in crystals of sodium sulphite ($Na_2SO_3 7H_2O$) is exactly half the weight of the whole. Where 1 oz. of crystals is prescribed, ½ oz. of anhydrous salt may be used, and vice versa. No conversion tables are needed for so simple a relationship.

Sodium Carbonate.

In the usual crystals of sodium carbonate, 106 parts by weight of the pure substance are combined with 180 parts of water to make a total of 286 parts. To find the weight of anhydrous salt to use in place of a prescribed weight of crystals, it is necessary to multiply by 106 and divide by 286, or, more simply, divide by 2.7. For conversion of crystals to anhydrous salt multiply by 286 and divide by 106, or to multiply by 2.7.

The following conversion table is a "ready reckoner" for sodium carbonate calculated on this basis :—

Weight of Anhydrous Salt. (Na_2CO_3)	Equivalent weight of Crystals. ($Na_2CO_3 10H_2O$)	Weight of Anhydrous Salt. (Na_2CO_3)	Equivalent weight of Crystals. ($Na_2CO_3 10H_2O$)
10 grs.	27 grs.	¼ oz.	296 grs.
20 grs.	54 grs.	**133½ grs.**	**½ oz.**
30 grs.	81 grs.	**178 grs.**	**1 oz.**
40 grs.	108 grs.	200 grs.	1 oz. 60 grs.
44½ grs.	**¼ oz.**	**½ oz.**	**1 oz. 114 grs.**
50 grs.	135 grs.	**222 grs.**	**1¼ oz.**
60 grs.	162 grs.	**267 grs.**	**1½ oz.**
70 grs.	189 grs.	300 grs.	1 oz. 330 grs.
80 grs.	216 grs.	**311 grs.**	**1¾ oz.**
89 grs.	**½ oz.**	**356 grs.**	**2 oz.**
90 grs.	242 grs.	**400 grs.**	**2¼ oz.**
100 grs.	270 grs.	**1 oz.**	**2 oz. 330 grs.**

Letters to the Editor

The Editor is not responsible for the opinions of his correspondents.

MAKING ENLARGEMENTS.

SIR,—I wonder if Mr. J. M. Barnard would be kind enough to let us know what is his average output in an evening with the enlarger.

In his article he repeats the good old advice of using fresh developer each time one gets down to the job of printing, and then he goes on to tell us how to mix the solution; he says "Take a *pint* of water . . ." Now I find that one ounce of normal developer is good for three half-plate prints, so it appears as if our good friend thinks nothing of running off about five dozen such prints in an evening.

Maybe he is so well blessed with this world's goods as to be able to afford to swill his prints about in huge quantities of solution.

In another article in the same issue, the last few lines on page 293, the reader is advised to work out an exposure table for various sizes of enlargement.

Since very few people manage to get all their negatives to the same density, would it not have been better to have advocated the well-tried-out method of making a test strip for each negative and paper?

Merely a cover-to-cover novice.—Yours, etc.,

JOHN E. WHATMOUGH.

DEPTH OF FOCUS.

SIR,—As a student and a lover of fair play, I want, if you can find the space for me, to expose a fallacy.

The claims made for the many miniature cameras that load our shop windows to-day are ridiculously exaggerated. I refer particularly to the half-truth that the shorter the focal length of the lens the greater its depth of focus.

This claim is ingenious enough; and I imagine many people like myself have believed it at some time.

It is based on the formula:—

$$\text{Hyperfocal distance} = (\text{approx.})\ C \times \frac{\text{focal length}^2}{\text{f/ No.} \times \text{Circle of confusion}}$$

This gives the actual hyperfocal distance for a contact print.

But for an enlargement, there are two corrections to add, as the degree of enlargement necessary varies inversely as the focal length of the lens:—

(1) The circle of confusion must decrease in the same ratio as the focal length.

(2) Since the speed of the film varies with the size of the grain, the speed must decrease in proportion to the area of the negative material, i.e., as the square of the focal length. This means that for the same speed, the f/ number must be reduced in proportion to the focal length.

Now if we apply the formula it will be obvious that as soon as the grain of the negative material becomes a significant factor, no advantage is obtained in further reducing the focal length. And, moreover, to retain the same shutter speeds the f/ number must be reduced in the same ratio as the focal length, so that an f/4.5 lens of 4 inches is actually faster than an f/3.5 one of 2 inches.

All I have said is perfectly obvious to anyone who sits down to think the matter out. But in view of the "miniature" propaganda going about, it needs saying.—Yours, etc.,

C. J. P. COOPER.

DEPTH-OF-FOCUS SCALE.

SIR,—Why do not manufacturers regularly fit to their cameras that most useful adjunct to good photography—a depth-of-focus scale? Its advantages are enormous, compared with what must surely be a negligible extra cost. And yet I know of only three makers who fit one to cameras of their make, and then, for some reason best known to themselves, they fit it to only one or two cameras in their range.

It may interest some of your readers to know of a way to make a very neat and useful depth-of-focus scale, as I have done for my Ikonta. The focussing on my camera is by revolving the front component of the lens in its mount, and therefore the following description is for making a scale to fit a camera with a similar arrangement. However, there is no reason why the method should not be adapted to suit a camera on which the whole lens and bellows are slid farther forward when focussing.

I pasted lightly a small semi-circle of paper on to the front of the shutter mount, and so that it extended round the lens to each side of the focussing pointer. Having focussed to some fairly short distance, I then, in accordance with the depth-of-focus table supplied with the camera, put marks representing the various stops, on the paper, against the correct distances on the lens mount. It will be found that this can be done quite accurately, but that the whole article is too small to fill in the figures neatly. So in my case I made another scale, three and a half times the size needed, and photographed from such a distance that it was reduced on the negative to the correct size. I then cut out the actual negative, stuck a piece of white paper to the back of it, and glued the whole thing (paper and celluloid) to the camera front. I thus had a neat scale, with clear white figures on a black background, made in celluloid which does not easily get damaged.—Yours, etc.,

A. H. L. MYER.

WHAT IS A MINIATURE CAMERA?

SIR,—With reference to the correspondence in your columns dealing with the question "What is a Miniature Camera?" Mr. Schauffelberger approaches the matter by way of focal length of objectives, while Mr. Wastell prefers to consider the area of the negative. Both of these correspondents will find that cinematograph cameras will comply with the requirements suggested by them as of most importance.

The answer to the above question is essentially one of definition. The adjective "miniature" means "small scale." Now a "small scale" *camera* can no more be defined by choosing one of its parts and limiting the size of that part than the size of a forest can be described by defining one of the trees. The word "small" is entirely relative and must be used in this connection with due regard to past history.

In the early days of large stand cameras it would have been quite logical to describe a small hand camera as a "miniature camera." When the so-called "vest-pocket cameras" were first introduced the principal object was that of the convenience of small size, a camera that could be carried in the pocket. It was not until many years later that Dr. Barnach decided that if a very small camera was to be capable of serious work in competition with larger cameras, it must be a precision instrument. From this realisation the modern "miniature camera" has grown.

Although Mr. Wastell lightly brushes aside the question of cost as irrelevant, the matter is of prime importance. A precision apparatus is essentially an expensive piece of equipment. For example, the lazy-tongs construction used with cameras fitted with bellows cannot possibly be termed a precision construction in terms compared to thickness of film emulsion and focus of small high-grade lenses.

The question "What is a miniature camera?" did not arise until it was realised that a small precision camera could compete with large cameras. Naturally, all manufacturers of small cameras would like a definition that will include their product, although it differs in no material manner from the small hand-cameras of "pre-miniature" days.

Whilst not presuming to offer a definition, which is a matter for experts to decide, I strongly suggest:—

(a) That a camera that cannot be conveniently carried, for example, in a hip pocket is not a "miniature camera."

(b) That a "miniature camera" should be of precision manufacture considered from the present state of the science of optics and mechanical production.

(c) That incidentally such a camera must of necessity cost appreciably more than other small cameras: for example, are small bakelite cameras sold for a few shillings to be included in the term "miniature camera"?

In conclusion, if the work of the few manufacturers who turn out high-grade small cameras is to be obscured by a host of other types of small cameras turned out at comparatively low prices and of equivalent merit, is it not better to use the term "miniature precision camera" for those cameras that truly conform to the original requirements from which this popular movement has grown?—Yours, etc., D. F. BROWN.

(Warsaw, Poland.)

"The A.P." Monthly Competitions

PRIZES AND RULES.

(I) For Advanced Workers.

This class is open to all amateur photographers.

FIRST PRIZE.—One guinea in cash or "A.P." silver plaque (optional).

SECOND PRIZE.—Half a guinea in cash or "A.P." bronze plaque (optional).

THIRD PRIZE.—Five shillings in cash.

A special prize of five shillings in cash for the best mounted picture.

CERTIFICATES OF MERIT.

In addition to the general rules (see below), the following conditions apply :—

(1) All prints must be accompanied by a stamped addressed envelope or wrapper if they are to be returned. Prints receiving an award will be retained.

(2) Prints must be mounted, but not framed.

(3) Returnable prints in the Advanced Section will be sent back with a typed criticism, and classified according to merit.

(4) Prints may be of any size and by any process, and must be the competitor's own work throughout.

(5) The award of a prize or certificate in the Advanced Workers' Competition or any other competition or exhibition will not debar the competitor from entering again on future occasions and winning further prizes.

(II) For Intermediate Workers.

This class is to encourage those readers who have passed the "beginner" stage and may have won an award in the Beginners' Competition, but have not progressed sufficiently to enter in the Advanced Competition.

FIRST PRIZE.—Half a guinea in cash.

SECOND PRIZE.—Five shillings in cash.

CERTIFICATES OF MERIT.

In addition to the general rules (see below), the following conditions apply :—

(1) No print must be larger than 10×8 in., and can be by contact or enlargement by any process, and may be mounted.

(2) The whole of the work (exposure, development, printing, etc.) must be carried out by the competitor.

(3) Prints entered in the Intermediate Section will be criticised and returned if accompanied by stamped addressed envelope or wrapper. Prints receiving an award will be retained.

(4) The award of a prize or certificate in the Intermediate Competition debars the competitor from entering this competition again, but he is then eligible for the Advanced Workers' Section.

(III) For Beginners.

This class is open to those who have never won an award in any photographic competition or exhibition.

FIRST PRIZE.—Half a guinea in cash.

SECOND PRIZE.—Five shillings in cash.

CERTIFICATES OF MERIT.

In addition to the general rules (see below), the following conditions apply :—

(1) No print must be larger than 6×4 in. Contact prints or small enlargements up to this size are eligible, but must be unmounted.

(2) The exposure must have been made by the competitor, but developing and printing may be the work of others.

(3) No prints can be criticised or returned.

(4) The award of a prize or certificate in the Beginners' Competition debars the competitor from entering this section again.

General Rules.

(1) Any number of prints may be entered, but each print must have on the back the appropriate coupon (see advertisement pages) the date of which must be within five weeks of the closing date of the competition. Overseas readers may use the most recent coupons to hand.

(2) Each print must have on the back the name and address of the competitor, and the title.

(3) All entries must be addressed to The Editor, *The Amateur Photographer*, Dorset House, Stamford Street, London, S.E.1, and the package must be marked on the outside "Beginners," "Intermediate," or "Advanced," as the case may be.

(4) No packages will be received on which there are postage charges to be paid.

(5) No communications on other matters should be enclosed with competition prints. No correspondence in connection with the competitions can be undertaken.

(6) The entry of a print will be regarded as a declaration that it is eligible under the rules, and that the competitor agrees thereto.

(7) No responsibility is taken for the safety of prints, and the Editor's decision on all points connected with the competitions is final.

(8) The publishers of *The Amateur Photographer* shall have the right to reproduce, without payment, any print entered, or to allow its reproduction in any other paper quoting from *The Amateur Photographer*.

(9) The closing date of each competition is the last weekday of the month. Prints arriving late will be entered for the next month's competition.

(10) The cash prizes awarded in these competitions are dispatched on the fifteenth of the month following the announcement of the awards.

The closing date for the December competition is Thursday, December 31st, and for the January competition, Saturday, January 30th.

AWARDS FOR NOVEMBER.

THE entries for the November competitions showed a further remarkable increase in numbers, and each section contained many prints well above the average. This particularly applied to the Advanced Workers' section and the Beginners'. This last-named section in particular becomes bigger every month, a sure indication of an influx of new readers, many of whom give great promise for the future. The awards are as follows :—

ADVANCED WORKERS' SECTION.

First Prize.—"Three Times a Day," by C. Peirpoint, 42, Anson Road, Cricklewood, N.W.2.

Second Prize.—"The Harem Window," by Yahya Arif, De Menashe Avenue, Maadi, Cairo, Egypt.

Third Prize.—"Pyrex and Eggs," by H. D. Lawson, 526, 10th Avenue, N.E. Calgary, Alta., Canada.

Mounting Prize.—"Cloud Shadows," by H. How, 67, Brook Road, Sheffield, 8.

Certificates of Merit.—"Freedom," by B. R. Fishwick, Braeside, Castle Hill, Prestbury, Ches.; "Deft Fingers," by D. Annaji Rao, 86, Saravana Perumal Mudaly Street, Vepery P.O., Madras, India; "Neptune's Fingerprints," by Peter Hennessy, Park Cottage, Netherton, Newton Abbot, S. Devon.

The prints not receiving awards have been grouped, those in the first group receiving Honourable Mention. The others have been marked Class 1, Class 2, and Class 3, respectively.

Those awarded Honourable Mention are as follows: J. Battersby (Nottingham); F. Burrows (Bucks); R. C. Carter (Letchworth); J. H. Clark (London); B. L. Critchley (Bristol); J. F. Cutler (Middx.); C. H. Diddams (Stockton-on-Tees); J. C. Gilchrist (Perthshire); H. Hartley (Liverpool, 9); G. Hilleard (Kent); Wm. Jackson (Hull); Dr. S. D. Joupar (Twickenham); M. Q. Kirker (London, W.2); C. D. Notley (Hammersmith); K. M. Parsons (Reading); M. Pethick (Leicester); P. Pethick (Leicester); R. T. Ryan (S. Africa); H. C. Stacy (London, S.W.4).

INTERMEDIATE SECTION.

First Prize.—"Hayle—from Lelant," by A. S. Parsons, 83, St. Peter's Avenue, Caversham Heights, Reading.

Second Prize.—"April," by R. L. Shaw, Dunvegan, Beacon Park, Pickering, Yorks.

Certificates of Merit.—"The Curse of Adam," by P. J. Gorvin, 24, Alice Street, Newport, Mon.; "A Quiet Hour," by J. W. Kenneth, 5, Sandy Lane, Chorlton-cum-Hardy, Manchester; "Can I Go With You?" by G. Kitchingman, 60, Waterloo Road, Hunslet, Leeds, 10; "The Plough Team," by E. T. Mills, High Street, Lane End, High Wycombe, Bucks.

BEGINNERS' SECTION.

First Prize.—"Flight," by Albert Edge, 36, Vienna Road, Edgeley, Stockport.

Second Prize.—"Sheila," by J. M. Dodd, 25, College Road, Ripon.

Certificates of Merit.—"The Essex Hounds at Harlow," by C. Bourke Borrowes, 26, Montpelier Square, S.W.7; "Crabs," by J. M. Crawford, 19, Woodland Avenue, Paisley; "Little Mother," by the Rev. Leonard R. Jennings, Wesley Manse, Polmont, Stirlingshire; "Landscape," by George Leonard, 171, Walton Street, Oxford.

Readers' Questions ANSWERED

GENERAL.—All communications for the Editor should be addressed: "The Editor, *The Amateur Photographer and Cinematographer*, Dorset House, Stamford Street, London, S.E.1," and in every case, without exception, must give the name and address of the writer.

CONTRIBUTIONS.—The Editor is glad to consider original, up-to-date manuscripts on photographic subjects. All contributions must be typewritten, or in very legible handwriting on one side of the paper only. Letters or communications arising out of matters already appearing in the paper are not paid for. The Editor disclaims legal responsibility for the safety of matter submitted to him, but he will endeavour to return rejected manuscripts, etc., when a stamped addressed envelope is enclosed. MSS. or prints that are not actually accompanied by a stamped wrapper or envelope can in no case be returned. Reproduction fees for prints are only paid by arrangement beforehand. The sending of a print, without any condition stated, will be taken as permission to reproduce it without fee.

ENQUIRIES AND CRITICISM.—Advice, Criticism and Information are freely given, but the following conditions should be read carefully before applying, as any communication which does not comply with the rules must be ignored.

(1) See "General" above. (2) Every question and every print for criticism must be sent separately through the post, and must be accompanied by a *separate* stamped addressed envelope. No exception can be made in any case to this rule, except so far as enquiries or prints from Overseas are concerned. (3) Neither enquiries nor prints for criticism must be enclosed with competition prints. (4) On the back of each print sent for criticism, in addition to the name and address of the sender, must be the title (if any), and the criticism coupon from the current issue. (5) Enquiries should be clearly written, on one side of the paper only, and should be specific and not general. Such enquiries as "How can I take interiors?" or "Can you give me some hints on outdoor portraiture?" are too general to be dealt with in this section. (6) All envelopes should be distinctly marked "Query" or "Criticism," as the case may be. (7) Prints are sent for advice or criticism on the distinct understanding that by so doing permission is given for their reproduction without fee. We endeavour to deal promptly with enquiries, but cannot undertake to answer by return of post, nor can we give precedence to any enquiry.

A selection of those replies is printed each week, but all questions are answered by post. Enquiries from abroad must contain a coupon also, but it need not be from the current number, and should be cut from the latest issue to reach the enquirer.

Retouching.

I notice in your paper such terms as "spotting" and "retouching." Can you suggest a book from which I might glean a little information on this branch of photography?

W. R. (Houghton-le-Spring.)

We have ourselves from time to time explained such terms as you mention. One of the standard books on the subject is "Retouching and Finishing for Photographers," by D. S. Adamson, published at 4s. 6d. post free. Naturally this contains a good deal of other information that you will probably not require, but it is an excellent work of reference for all phases of negative and print finishing. Our publishers can supply it if required.

Per Cent Solutions.

[illegible] so many formulæ are given only in metric form.

Particulars of Emulsions.

Can you recommend a book giving information of curves, exposure, gradation and colour sensitivity of various types of emulsions?

N. R. S. (Blackburn.)

We cannot remember any one book that gives all the information you require. Most of the plate-makers supply information as to the characteristics of their plates and films from every possible point of view, and this is likely to be of considerable practical use to you. If you write to the makers of the plates and films in which you are interested they will probably let you have all the particulars you require.

Metol for Tank.

Lantern Slides with Pyro.

If you consider pyro a good developer for lantern slides, will you supply me with a working formula?

E. G. M. (London.)

Although seldom used nowadays this form of development, with practice, is capable of producing the finest results. We advise you to work from three stock solutions:—

A.	Pyro	1 oz.
	Sodium sulphite ..	2 oz.
	Citric acid	40 grs.
	Water to	10 oz.
B.	Ammonia (.880) ..	1 oz.
	Water to	10 oz.
C.	Ammonium bromide ..	1 oz.
	Water to	10 oz.

For a normal solution, to each ounce of water add A, 30 minims; B, 60 minims; C, 30 minims. If still warmer tones are required, increase the exposure and add more of C. This procedure must be arrived at by experiment, but is easily decided.

Swing Back.

I have acquired a camera with a swing back—a mystery to me. What is its purpose?

G. P. (London.)

You should try to find an "old hand" who will explain and demonstrate the movement. Its chief purpose is to get vertical lines correct when the camera is tilted upwards to include the upper portion of a subject, the back then being "swung" till it is vertical. A focussing screen is really necessary to adjust the focussing and stop, as the definition is affected by this arrangement. If you can find the friend suggested, he will give additional tips as to uses of the movement, which is of special value in architectural work.

One-solution Hydroquinone.

Can you give me a formula for a hydroquinone developer that can be made up in one solution instead of two?

C. N. (Eastbourne.)

Dissolve 80 grs. potassium metabisulphite in 8 oz. water, and then dissolve in this 50 grs. hydroquinone. In another 8 oz. water dissolve 840 grs. potassium [illegible]

PHOTOGRAMS OF THE YEAR

The Annual Review *of the* World's Pictorial Photographic Work

Edited by F. J. MORTIMER, Hon. F.R.P.S., Editor of "The Amateur Photographer and Cinematographer"

"PHOTOGRAMS OF THE YEAR," now making the 42nd annual appearance, maintains the high standard of artistic achievement which has characterised it from the first number.

This year's subjects range from everyday scenes and still-life studies to landscapes, portraits and architecture. Beauty, art and technical skill are blended to produce an outstanding volume of photographic excellence.

Keen photographers everywhere will find pleasurable occupation in making a careful study of these splendid examples of the art of the camera and of noting the latest developments in technique.

The very wide scope of a Leica

ONE big reason for the enormous following that LEICAS have obtained is their truly notable versatility. Literally, you can do the work of a battery of ordinary cameras with just one compact and handy Leica. Landscapes, seascapes, genre studies, architecture, sports scenes, groups, portraits, distant telephoto work, microphotography—all these, and a lot more, are well within its generous scope. A LEICA, in truth, represents not just one camera, but a dozen.

- Let "the WESTMINSTER" show you how a liberal allowance for your present camera, in EXCHANGE, and Westminster Out-of-Income facilities, can help you in realising your ambition and acquiring a LEICA.

Leicas cost from £16 upwards. Below is shown the Model IIIa, with f/2 Summar lens, automatic focussing, shutter speeds to 1/1,000th sec., at £43 or 9 monthly payments of £5 0s. 4d.

Prepaid Advertisements

THE CHARGE FOR ADVERTISEMENTS IN THESE COLUMNS IS :—

12 words or less.....2/6
2½d. for every additional word.

Each paragraph is charged separately.

SERIES DISCOUNTS are allowed to Trade Advertisers as follows on orders for consecutive insertions, provided a contract is placed in advance, and in the absence of fresh instructions the entire "copy" is repeated from the previous issue : 13 consecutive insertions, 5% ; 26 consecutive, 10% ; 52 consecutive, 15%.

All advertisements inserted in these columns must be strictly prepaid, and reach the offices, Dorset House, Stamford Street, S.E.1, not later than first post Friday for the following week's issue, or one day earlier at the Branch Offices, 19, Hertford Street, Coventry ; Guildhall Buildings, Navigation Street, Birmingham, 2 ; 260, Deansgate, Manchester, 3 ; 26B, Renfield Street, Glasgow, C.2.

Advertisements received too late for one issue, or crowded out, are published in the first following in which there is space. The Proprietors retain the right to refuse or withdraw advertisements at their discretion.

The Proprietors are not responsible for clerical or printer's errors, although every care is taken to avoid mistakes.

Box No. Advertisers

If a Box No. is required, the words "Box 000, c/o 'The Amateur Photographer'" should be included in the charge, and an additional 6d. sent for registration and cost of forwarding any replies.

Letters addressed to box numbers are simply forwarded by us to the advertisers. We do not deal with the correspondence in any other way, nor accept any responsibility in connection with the advertisements.

Deposit System

Readers may deal in safety through our Deposit System. Purchase money should be deposited with "The Amateur Photographer and Cinematographer," when both parties are advised of its receipt. The time allowed for decision is three days, counting from receipt of goods, after which period, if buyer decides not to retain goods they must be returned to sender. If a sale is effected, buyer instructs us to remit amount to seller, but if not, seller instructs us to return amount to depositor. Carriage is paid by the buyer, but in event of no sale, and subject to there being no different arrangement between buyer and seller, each pays carriage one way. The seller takes the risk of loss or damage in transit, for which we take no responsibility. For transactions up to £10 a deposit fee of 1/- is charged ; over £10 and under £50, 2/6 ; over £50 and under £75, 5/- ; over £75 and under £100, 7/6 ; over £100 one-half per cent. All correspondence must be sent to Dorset House, Stamford Street, London, S.E.1.

Cheques and Postal Orders sent in payment for deposits or advertisements should be made payable to ILIFFE & SONS LTD., and crossed **& Co.**

Notes being untraceable if lost in transit should no be sent as remittances.

WARNING

We have received many complaints from our readers in regard to the business methods of Mr. R. L. Green, trading as R. L. Green's Photographic Exchange, of 218, Fore Street, Edmonton, London, N.18, or (possibly with different initials) as Cine Photo Supplies, 4, Holborn Place, High Holborn, W.C.1.

For some considerable time we have refused to insert his advertisements in "The Amateur Photographer and Cinematographer," and from the complaints we have received it would appear that his practice is to communicate with private advertisers having goods for sale, offering to take such goods in exchange for others, or to purchase for cash. Readers are advised to ignore all such offers from this quarter.

PHOTOGRAPHY MADE EASY

Third Edition Revised throughout

By R. CHILD BAYLEY

Author of "The Complete Photographer," "Hand Cameras," "Photographic Enlarging"

AS EASY AS A · B · C

This is a book for photographic beginners, and, if carefully studied, it will enable the novice with a camera to get a greater proportion of successful photographs than would usually be the case.

"Photography Made Easy" should be read by everyone taking up photography : it should form as much a part of the outfit as the camera itself : it is an ideal present to give an amateur photographer.

Every Camera User should get a Copy NOW!

The AMATEUR PHOTOGRAPHER DIARY
and Handbook for 1937

This useful little handbook contains, in addition to the usual diary pages—one week to the page—over fifty pages of facts and formulæ for the keen camera user. Information is given on developing, fixing baths, mountants, and finishing negatives and prints. Numerous reference tables dealing with hyperfocal distances, enlarging, screen distances for lantern projection and exposures are included, as well as sections for exposure records and personal memoranda.

Size 3⅛×5⅜ inches, well printed, neatly and strongly bound in leather cloth, with back loop pencil and round corners.

THE LEADING Leica SPECIALISTS

We believe we imported the first Leica cameras that came into this country nearly twelve years ago.

We have handled and sold more Leicas than any firm in the country.

We use them ourselves and have always done so, and each new Leica accessory has been actually tested by one or other of our staff, so that we know from experience what these accessories will do.

We make "Automax" Enlargements $3\frac{1}{2} \times 2\frac{1}{2}$ from Leica negatives at 2/- a dozen, or $4\frac{1}{4} \times 3\frac{1}{4}$ for 2/6 a dozen, and our "Microlux" processing is the most perfect service it is possible to obtain.

Logically, therefore, we are better qualified to help and advise you because of our longer experience. Advice and choice of apparatus, valuation of your equipment, insurance, and technical and expert assistance in the taking or processing, is always at your service.

We now supply Leicas on 15 or 24 equal monthly payments —you can buy a IIIA for as little as £3 1s. 8d. a month.

MAKING 'Light' OF NIGHT PHOTOGRAPHY

FREE

This interesting book, "NIGHT PHOTOGRAPHY—Picture Making at Night — Indoors and Out" — contains **28** *pages of clear information with illustrations and diagrams.*

PHOTOGRAPHY at Night !—the "impossibility" of yesterday, is a fact to-day; simple for every amateur who loads his camera with Selo Hypersensitive Panchromatic Roll Film. So great is the speed of this film to artificial light, that there is scarcely a highway or by-way that is not a happy hunting ground for fascinating 'night-snaps.' Shops, theatres, signs, floodlighting, or even a street lamp, all provide illumination for fine effects . . . . And indoors, portraits, groups, domestic scenes and festive parties, give splendid opportunities for pictures which you will treasure all your life.
